SERVICE MANUAL

Vol. 1 (1st Edition)

Hyper HAD™

SAFETY RELATED COMPONENT WARNING

Components identified by shading and  marked on the schematic diagrams and parts list are critical to safe operation. Replace these components with SONY parts whose part numbers appear as shown in this manual or in supplements published by SONY.

このマニュアルに記載されている事柄の著作権は当社にあり、説明内容は機器購入者の使用を目的としています。従って、当社の許可なしに無断で複写したり、説明内容(操作、保守等)と異なる目的で本マニュアルを使用することを禁止します。

The material contained in this manual consists of information that is the property of Sony Corporation and is intended solely for use by the purchasers of the equipment described in this manual.

Sony Corporation expressly prohibits the duplication of any portion of this manual or the use thereof for any purpose other than the operation or maintenance of the equipment described in this manual without the express written permission of Sony Corporation.

Le matériel contenu dans ce manuel consiste en informations qui sont la propriété de Sony Corporation et sont destinées exclusivement à l'usage des acquéreurs de l'équipement décrit dans ce manuel.

Sony Corporation interdit formellement la copie de quelque partie que ce soit de ce manuel ou son emploi pour tout autre but que des opérations ou entretiens de l'équipement à moins d'une permission écrite de Sony Corporation.

Das in dieser Anleitung enthaltene Material besteht aus Informationen, die Eigentum der Sony Corporation sind, und ausschließlich zum Gebrauch durch den Käufer der in dieser Anleitung beschriebenen Ausrüstung bestimmt sind.

Die Sony Corporation untersagt ausdrücklich die Vervielfältigung jeglicher Teile dieser Anleitung oder den Gebrauch derselben für irgendeinen anderen Zweck als die Bedienung oder Wartung der in dieser Anleitung beschriebenen Ausrüstung ohne ausdrückliche schriftliche Erlaubnis der Sony Corporation.

SECTION 1 GENERAL DESCRIPTION

This section is extracted from
operation manual.

About This Manual

Purpose and Audience for This Manual

The DXC-537A/537AP Color Video Camera is a camera for business and institutional use, having high picture quality and various functions. Therefore this manual has been prepared assuming that it will be read by all types of users: ranging from professionals and amateurs, to beginning camera operators. Please use this manual according to your experience and needs.

How to use this manual

For those who are used to the operation of a video camera

Begin with Chapter 2 and use it thereafter according to your needs.

For those who are using a video camera for the first time

We recommend that you read Chapter 1 to get a general idea about the video camera first and then read through the remaining chapters.

For those who would like to start shooting immediately

Read Chapter 2 and make the camera system connections and adjustments. If you have a system which has been already connected and adjusted, read Chapter 3 to learn the basic camera operations.

Glossary and Index

The terms with a number such as ¹⁾ and ²⁾ are explained in the footnotes on the same page. The terms with an asterisk (*) are explained in the Glossary on page A-6. Further, the Index provides terms in alphabetical order and the pages on which they appear.

About This Manual

Parts of This Manual

This manual is divided into six chapters and appendixes. The following is a brief summary of the contents of each part.

Chapter 1 Introduction

This chapter introduces you to the features of the camera, the names and functions of parts, and how to watch the viewfinder.

Chapter 2 Connections and Adjustments of the Basic System — Camcorder System and Portable VTR System

This chapter shows you how to set up, connect and adjust a portable camera system.

Chapter 3 Shooting — Basic Operations

This chapter explains the basic operations of the camera including the settings of the switches.

Chapter 4 Shooting — Advanced Operations

This chapter explains the settings of the switches according to each shooting situation and menu operations for shooting with special effects.

Chapter 5 System Upgrading

This chapter explains the connection examples of various camera systems other than the portable camera system. It also introduces the recommended components and optional accessories.

Chapter 6 Maintenance

This chapter provides troubleshooting and maintenance information for the camera.

Appendix

This section provides specifications and glossary.

Chapter 1 Introduction

This chapter introduces you to the features of the video camera, the names and explanation of its parts and displays. It provides you with the overall information about the video camera.

Features	1-2

Viewfinder Display	1-13
Precautions	1-18
On Safety	1-18
On Use and Storage	1-18
Notes on CCD Image Sensors	1-20

Features

The DXC-537A/537AP series is a high quality color video camera for business and institutional use. The camera uses three 2/3" ¹⁾ format Hyper HAD ²⁾ sensor CCD* chips, each having a total of about 380,000 (NTSC) or 460,000 (PAL) effective picture elements.

The camera head is dockable with a camera adaptor or VTR, which provides maximum system versatility.

High Picture Quality

Horizontal resolution* of 750 TV lines, signal-to-noise ratio of 62 dB (NTSC) or 60 dB (PAL)

The high horizontal resolution of 750 TV lines and S/N are made possible by the use of high picture quality CCDs with 380,000 (NTSC) or 460,000 (PAL) effective picture elements.

High F8.0 ³⁾ sensitivity

Even dark scenes, such as in a candlelight, can be shot with high quality.

Conventional camera

DXC-537A/537AP

1) 2/3"

Indication of the CCD size converted to the diagonal size of a picture tube. Generally, the larger the CCD size is, the lower the smear is, the higher the dynamic range is and the better the signal-to-noise ratio is.

3) F8.0

Indicates the aperture value when the standard picture level is obtained under the lighting of a certain brightness.

2) Hyper HAD TM

Abbreviation of Hyper Hole-Accumulated Diode. "Hyper HAD" is a trademark of Sony Corporation.

Features

High Sound Quality

Supplied super cardioid electret condenser microphone

It eliminates the noise caused by operating the camera, and records the sound from the front of the camera clearly.

Audio reference signal recording

While recording the color bar, the audio reference signal of 1 kHz, -60 dBm (0 dBm = 0.775 Vrms) can also be recorded on the VTR. The recorded signal can be used as a reference signal for checking the cable transmission loss, a sign to start a program, etc.

Low smear

A vertical tail (smear) appears when a strong light is being shot. This camera suppresses the smear remarkably to make possible shooting with a spotlight.

Two-dimensional crystal low-pass filter

Cross color in the horizontal and vertical directions is greatly reduced so that a fine mesh or striped pattern can be reproduced with less color blur.

The ideal gamma curve*

The gamma curve that determines the reproducibility of black is made to approach the ideal curve. Therefore, even black portions in details and dark scenes can be reproduced effectively.

Stepping diagonal edge compensation circuit

When the difference in brightness between the top and bottom of a horizontal line is large, such as with a fluorescent lamp and window blinds, step-like notches appear on the horizontal line due to the scanning lines. This circuit compensates for these notches while maintaining the reproduction of detail.

Conventional camera

DXC-537A/537AP

Versatile Shooting Functions and Operations

ATW (Auto Tracing White balance) function

The white balance* is automatically adjusted to correspond to the changes in the lighting conditions. It is especially convenient when you have little time to adjust it or when you make a continuous recording in a place when the lighting conditions change, for example, moving from outdoors to indoors.

Auto iris compensation function

A backlit or spotlighted scene can be shot clearly by changing the reference level of the automatic iris adjustment with the A.IRIS MODE selector.

STD position

SPOT L position

Electronic shutter

The built-in electronic shutter lets you shoot fast-moving objects with little blurring.

Electronic shutter OFF

1/500 second

Features

Gain* selection function

Gain values of -3, 0, 3, 6, 9, 12, 18 and 24 dB can be set for each of the three positions on the gain selector.

Turbo gain function

The gain can be set to 30 dB at a touch. It is especially useful when the lighting suddenly becomes dark while shooting.

Color matrix* switching function

Three color tones can be switched by the MATRIX selector to cope with the subject and situation. In the H. SAT position, a gorgeous party, for example, can be shot with vivid color tones. In the FL position, even under fluorescent lighting, the picture can be shot with natural color tones without greenish.

DCC (Dynamic Contrast Control) circuit

Detects the peak level (the brightest part) of the subject, and automatically adjusts the knee point*. High contrast that usually turns the screen white can also be reproduced.

DCC OFF

DCC ON

EVS (Enhanced Vertical Definition System) function

The vertical resolution can be increased from 400 lines to 450 lines (NTSC) or from 450 lines to 530 lines (PAL). However, please note that signal processing stops down the iris one stop, reducing sensitivity.

Note

In EVS operation, the dynamic range is narrowed from 600% to 300%.

CLS (Clear Scan™ 1)) function

This function adjusts the time difference required to produce a picture on a screen with a video camera and a computer. It reduces the stripe noise which appears when a CRT* screen (such as the screen of a personal computer) is shot.

**Recording the year, date and time of shooting**

The year, date and time of shooting can be recorded on the VTR.

1) Clear Scan™
"Clear Scan" is a trademark of Sony Corporation.

Names of Parts

For explanation of each part, please see the page indicated in parentheses ().

Indicators in the Viewfinder and Viewfinder Display

This section explains the status indicators around the viewfinder screen and the messages displayed on the viewfinder screen.

Status Indicators in the Viewfinder

There are four status indicators around the viewfinder screen. These indicators flash or light to indicate the status of the camera, VTR or camera control unit.

Status indicators and their meanings

Indicator (color)	Name	Flashes:	Lights:
REC/TALLY (red)	Recording indicator Tally indicator	<ul style="list-style-type: none"> Just after a recording is activated (while the VTR is starting up). Only for a VTR with the warning function: when the VTR's movement is insufficient 	<ul style="list-style-type: none"> During recording When a camera control unit is connected: When the picture of this camera is selected by the camera control unit
BATT (red)	Battery indicator	When the battery of the VTR becomes weak (When using the camera adaptor's battery, it does not flash.)	When the battery of the VTR or the camera adaptor is exhausted
SHUTTER (red)	Shutter indicator	—	When the SHUTTER switch is set to ON or CLS
GAIN UP (orange)	Gain up indicator	—	When the gain is 3 dB or more

When the camera control unit is connected

The BATT indicator flashes fast when a switch or control of the camera control unit is operated. This is not a failure of the unit.

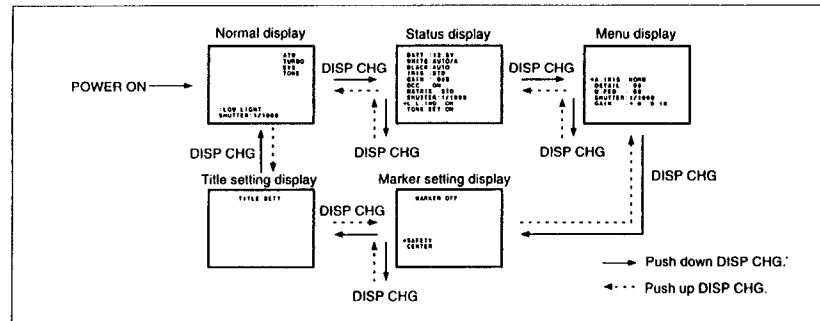

Viewfinder Display

The following displays appear on the viewfinder screen.

- Normal display (including warning messages)
- Automatic black balance and automatic white balance status display
- Status display (current setting status)
- Menu display
- Marker setting display
- Title setting display

Changing the viewfinder display

Each time you push the DISP CHG switch down or up, the display changes in the following order.

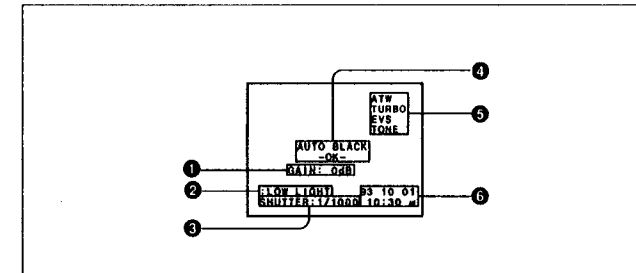

Changing the viewfinder display

- On the status display menu display or marker setting display, the cursor appears to the left of the item. Each time the DISP CHG switch is pressed down, the cursor moves down, and when it reaches the bottom-most item, the screen changes to the next display.

Indicators in the Viewfinder and Viewfinder Display

Normal display (including warning messages)

The viewfinder screen normally displays the following information. If a problem occurs, a warning message appears.

Normal display

① Switch Indicators

The following indicators appear for two seconds when each switch setting is changed.

Switch indicators	
Switch	Indicators
GAIN selector	GAIN: -3 dB, GAIN: 0 dB, GAIN: 3 dB, GAIN: 6 dB, GAIN: 9 dB, GAIN: 12 dB, GAIN: 18 dB, GAIN: 24 dB, GAIN: TURBO
DCC switch	DCC: ON, DCC: OFF
WHITE BAL selector	WHITE: PRESET, WHITE: AUTO/A, WHITE: AUTO/B
A. IRIS MODE selector	IRIS: STD, IRIS: BACK L, IRIS: SPOT L
MATRIX selector	MATRIX: STD, MATRIX: FL LIGHT, MATRIX: H.SAT.

② Warning message

Warning messages are displayed to indicate a problem.

Warning messages and their meanings

Warning message	Meaning
: LOW LIGHT	Lighting is insufficient.
BATT. 10.7V	The input voltage to the camera is low (less than 11V).

You can set the LOW LIGHT message to be displayed or not on the normal or status display.
On the normal display, press the DOWN/OFF button to turn off the message; press the UP/ON button to resume it. (For setting on the status display, see page 1-16.)

③ Shutter speed/CLS (Clear Scan) indicator

The current shutter speed or the Clear Scan frequency is displayed steadily.

④ Automatic black balance and automatic white balance status display

The following display appears when the automatic black balance or the automatic white balance function is activated.

Automatic black balance and automatic white balance status display

When:	Display
During black balance adjustment	AUTO BLACK -OP-
When the black balance adjustment is complete	AUTO BLACK -OK-
During white balance adjustment	AUTO WHITE -OP-
When the white balance adjustment is complete	AUTO WHITE -OK-

For details, see "Adjusting the Black Balance" (page 3-7), or "Adjusting the White Balance" (page 3-9).

⑤ Switch/function ON indicators

The following indicators appear when the corresponding switch or function is set to ON.

Switch/function ON indicator

Switch/Function	Indicator
ATW switch	ATW
TURBO GAIN switch	TURBO
EVS switch	EVS
TONE function	TONE

The TONE indicator appears when the OUTPUT switch is set to BARS with the TONE SET item on the status display set to ON. (See page 1-16.)

⑥ Clock display

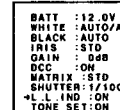

The current year, date and time are displayed when the CLOCK switch is set to ON. The display is superimposed to camera video output.

For clock setting, see "Setting the Clock" on page 4-19.

Indicators in the Viewfinder and Viewfinder Display

Status Display

The display shows the current settings of the switches. It also allows setting the "L.L.IND" and "TONE SET" items.

Status display

Items on the status display and their meanings

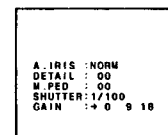

Item	Meaning
BATT	Battery voltage
WHITE	WHITE BAL switch setting
BLACK	Black balance adjustment mode selected on the camera control unit or the remote control unit. (Always indicates AUTO when the camera is used without these units.)
IRIS	A. IRIS MODE selector setting
GAIN	Gain obtained by the current position of the GAIN selector, or TURBO (when the TURBO GAIN switch is set to ON)
DCC	DCC switch ON/OFF setting
MATRIX	MATRIX selector setting
SHUTTER/CLS	Shutter speed or Clear Scan frequency setting
L.L.IND	Select if the LOW LIGHT message is displayed on the normal display or not.
TONE SET	Select if the 1 kHz audio reference signal is output together with the color bar signal or not

Setting L.L.IND and TONE SET

- Set the L.L.IND and TONE SET items on the status display as follows:
Push the DISP CHG switch down or up to display the cursor to the left of the item to be set.
- Press the UP/ON button to set to ON, or the DOWN/OFF button to set to OFF.

Menu Display

The following items can be set on the menu display.

Menu display

Precautions

On Safety

Power supply

Operate the unit on 12 V DC power only. For operation, use the power source specified in this manual.

Do not disassemble the unit

Touching the high-precision parts in the unit may cause permanent damage. High voltage components inside the viewfinder are dangerous.

Keep foreign objects out of the unit

Dropping flammable or metal objects into the cabinet, or spilling liquids on the unit can lead to accidents.

On Use and Storage

Avoid mechanical shock

There are high-precision parts inside the unit. Dropping the unit or subjecting it to mechanical shock may cause damage.

Mount the zoom lens correctly

Incorrect attachment may damage the lens. Before attaching, be sure to read "Attaching a lens" on page 2-10.

Dockable VTRs

The following are the VTRs which can be docked on this unit. Sony does not guarantee the use of the unit docked with the other VTRs.

VTRs dockable on this unit

Manufacturer and model number	Camera adaptor required
Sony Betacam SP VTR PVV-1/1P	—
Sony Betacam SP VTR BVV-5/5PS	CA-511
Sony Hi8 VTR EVV-9000/9000P	—
Panasonic S-VHS VTR AG-7450	CA-512/512P
JVC S-VHS VTR BR-S410/S411/S420C	CA-513

Do not cover the unit while in use

Covering the unit causes internal heat build-up.

Do not shoot the sun or a strong spotlight for a long period of time

This may damage the CCD elements. If the viewfinder is directly pointed at the sun, the sunlight may focus inside the viewfinder through the eyepiece, and damage the inside plastic.

Items on the menu display and their meanings

Item	Meaning
A. IRIS	Set the reference level of the automatic iris function.
DETAIL	Set the detail level.
M. PED	Set the master pedestal* level.
SHUTTER/CLS	Set the shutter speed or Clear Scan frequency.
GAIN	Set the gain obtained by each position of the GAIN selector.

For setting the items, see "Shooting with Special Effects (Menu Operation)" on page 4-9.

Marker setting display

The size of the safety zone and the center marker can be set on this display. To display the safety zone and the center marker, set the MARKER switch to ON.

Marker setting display

Marker setting items and their meanings

Item	Meaning
SAFETY	Set the size of the safety zone
CENTER	To display the center marker or not

For setting the markers, see "Displaying the Marker on the Viewfinder" on page 4-17.

Title setting display

A title with letters and numbers can be created on this display and be recorded on the VTR.

Show the display on the viewfinder screen and create a title using the UP/ON and DOWN/OFF buttons.

Title setting display

For creating a title, see "Recording a Title" on page 4-21.

Precautions

Avoid the following conditions of use or storage

- In excessive heat or cold (permissible temperature range: -10°C to $+45^{\circ}\text{C}$ or 14°F to 113°F)

Remember that the temperature inside a locked automobile in summer can rise as high as 50°C (122°F).

- In damp or dusty locations
- Locations where the unit may be exposed to rain
- Locations where the unit is subject to vibrations
- Near locations where strong radio frequency energy is generated

On use and storage of the lens

- When the unit will not be used for a long period of time, put the lens cap on the lens.
- Normally keep the lens attached to the unit. When removing the lens, choose a location where there is the least dust.
- When the lens becomes dusty or soiled, clean it immediately. For cleaning, see page 6-5.

On transportation of the unit

Use the supplied carrying case or packing carton.

When you transport the unit as a package, put the unit in the carrying case and repack it with the packing carton of the carrying case.

In case of trouble

If you notice an unusual sound, smell or smoke, turn off the power immediately, disconnect the power supply and consult your Sony dealer.

Notes on CCD Image Sensors

Because of the high sensitivity of the CCD image sensors, the following phenomena may appear on the monitor screen while you are using the unit. These phenomena do not indicate a malfunction of the unit.

Vertical smear

Smear tends to happen when an extremely bright object such as an electric light, fluorescent lamp, sunlight or strong reflection is being shot.

White dots

White dots may appear in the video output if the unit is used at very high temperatures.

Aliasing

Aliasing may occur when you shoot fine stripes or straight lines. The lines will appear jagged.

When using the electronic shutter

If the electronic shutter is used when the gain is 18 dB or more, a clear picture may not be obtained. Use the electronic shutter only under sufficient lighting conditions with the gain set to 0 dB or an approximate value.

About the Basic System

Video Camera Kits and Their Components

Components of the DXC-537A/537AP series video camera kits

The DXC-537A/537AP camera head is sold as a kit with other components for a camera system. The model name differs according to the components included in the kit and the color system NTSC or PAL. The suffixes K, L and H mean kit names and the suffix P means the PAL system (therefore, the model names without suffix P are of the NTSC system).

Please see the following table and illustration to check your kit.

Components included in the DXC-537A/537AP kits

Model Name Components	DXC-537AK DXC-537APK	DXC-537AL DXC-537APL	DXC-537AH DXC-537APH
DXC-537A/537AP Camera Head	○	○	○
Chart for flange focal length adjustment	○	○	○
DXF-501/501CE Viewfinder	○	○	×
LC-421 Carrying Case	○	○	×
VCT-14 Tripod Adaptor	○	○	×
ECM-670 Microphone	○	○	×
CAC-12 Microphone Holder	○	○	×
EC-0.3C2 Microphone Cable	○	○	×
VCL-916BYA Zoom Lens	○	×	×

○: included in the kit ×: not included in the kit

Carrying case is open.

Chapter 2 Connections and Adjustments of the Basic Systems — Camcorder System and Portable VTR System

This unit can be used in various systems, however, this chapter explains the connections and adjustments of the Camcorder system, a unified system of camera and VTR, and the portable VTR system using a camera adaptor.

For other systems, please see chapter 5.

Components required for shooting with a camera

In addition to the components of the kit, other units such as a VTR and power source are necessary for shooting with the camera.
The following charts show the configuration of a camcorder system and that of a portable VTR system.
The equipment in shade are components included in the kit.
For connection to stationary VTRs, see chapter 5.

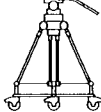

Configuration of camcorder system

About the Basic System

Configuration of portable VTR system

Convenient accessories for shooting

 VCT-14 tripod adaptor	 LC-421 carrying case	 LC-304SFT soft case	 NP-1B/1A battery pack
 Tripod	 LCR-1 rain cover	 CAC-4 chest pad	 BC-1WA/1WB battery charger

Accessories for shooting

About the Basic System

Handling the Carrying Case

Opening the carrying case

To open the camera carrying case, release the four catches at the edges of the case, then open the upper part of the case.

Opening the carrying case

Taking the Camera Out of the Case

Push the lever on the bottom of the case toward RELEASE to unlock the camera. Slide the camera backward and remove it.

Taking out the camera

Packing the Camera in the Case

Align the bottom of the camera with the attachment grooves on the bottom of the case, and the pin on the bracket of the camera with the pin on the case. Slide the camera forward until it locks.

Packing the camera in the case

Attaching the Basic System Components

Packing sample

Notes on packing

- Viewfinder: Loosen the lock ring, slide the viewfinder to the left-most position, and tighten the ring. (See page 2-15.)
- Microphone: Loosen the microphone fastening lever, lower the microphone and tighten the lever. (See page 2-19.)

1) The CAC-4 cannot be packed when the PVV-1/1P is attached to the Camera.

Attaching a Dockable VTR

The camcorder system is a unified system of the camera and dockable VTR, such as the PVV-1/1P Betacam VTR and EVV-9000/9000P Hi8 VTR (optional). This section explains attaching a dockable VTR, using the PVV-1/1P as an example. The same procedures apply for attaching and detaching the EVV-9000/9000P.

Attaching a dockable VTR

Note

Before attaching a VTR, remove the viewfinder from the camera head.

- 1 Place the projection on the bottom of the VTR on the concave portion of the camera.

- 2 Slide the VTR forward until it locks.

- 3 Tighten the two screws on the handle.

- 4** Tighten the two screws in the shoulder pad.

Detaching a dockable VTR

Follow the above procedures in the reverse sequence.

Attaching a Camera Adaptor

When using a portable VTR or camera control unit, attach the CA-537/537P or CA-327/327P camera adaptor to the camera head. The attaching and detaching procedures are the same as those for the dockable VTR.

Note on using the CA-327/327P camera adaptor

Only the CA-327/327P with the following serial numbers can be attached to the DXC-537A/537AP camera head.

CA-327: Serial number 10271 or higher for the DXC-537A

CA-327P: Serial number 40101 or higher for the DXC-537AP

If your serial number is lower than the above number, consult your Sony dealer since the printed circuit board needs to be exchanged.

Attaching the Basic System Components

Attaching a Lens

The lens in the DXC-537AK/537APK kit is already attached. For other kits, select a lens appropriate for the camera and attach it. Make sure to mount a 2/3-inch lens. This section explains how to attach a lens using the VCL-916BYA zoom lens as an example.

Attaching the lens

- 1** Remove the lens mount lever stopper from the lens fastening lever, push the lever up, and remove the mount lens cap.

- 2** Turn the lens fastening lever fully counterclockwise.

- 3** Align the center pin on the lens with the notch on the lens mount, and insert the lens into the mount.

- 4** Holding the lens, push down on the lens fastening lever to tighten the ring and secure the lens. Then replace the lens mount lever stopper removed in step 1.

- 5** Checking the position of the ◀ mark on the connector, insert it into the LENS connector on the camera until it locks. Thread and fix the cable along the clamps.

When the lens cable has a 6-pin connector

The LENS connector of this unit is a 12-pin connector. If your lens cable has a 6-pin connector, use an LO-612 (by Canon) or ECF-124 (by Fujinon) conversion cable.

Detaching a lens

Follow the lens attaching procedures in the reverse sequence.

To remove the connector from the LENS connector, pull out the connector while holding the ring.

Removing the lens connector

Attaching the Basic System Components

Attaching an optional filter

Loosen the lens hood fastening screw and detach the lens hood. Then screw the filter clockwise along the threads in the lens barrel.

Attaching an optional filter

Attaching a Viewfinder

The viewfinder in the DXC-537AK/537AL/537APK/537APL kit is already attached. If your kit does not include a viewfinder, attach an optional viewfinder. This section explains how to attach the DXF-501/501CE viewfinder.

Attaching the viewfinder

- 1 Loosen the lock ring. While pulling up on the stopper pin, align and guide the viewfinder along the viewfinder attachment.

- 2 Turn and tighten the lock ring to fasten the viewfinder.

- 3 Connect the viewfinder connector cable to the VF connector on the camera. Fasten the cable along the clamps.

Attaching the Basic System Components

Adjusting the viewfinder position

You can adjust the position of the viewfinder in every direction (right and left, up and down, and front and back). Adjust it to the most comfortable position.

Adjusting to the left or right

Adjusting the viewfinder position to the left or right

- 1 Loosen the lock ring.
- 2 Looking through the eye cup, slide the viewfinder sideways to the most convenient position.
- 3 Tighten the lock ring.

Adjusting the angle

Adjust the angle of the eye cup by tilting it up or down.

Adjusting the viewfinder angle

Adjusting front or back

Adjusting the viewfinder position front or back

- 1 Loosen the LOCK lever.
- 2 Slide the viewfinder front or back.
- 3 Tighten the lever.

Detaching the viewfinder

Loosen the lock ring, and while pulling up on the stopper pin, slide the viewfinder to the right to detach it.

Detaching the viewfinder

Packing in the carrying case

The camera head can be packed with the viewfinder attached. When packing, tilt down the eye cup, and slide the viewfinder back and to the left all the way.

Attaching the Basic System Components

Attaching a Microphone

DXC-537AK/537AL/537APK/537APL kit: The CAC-12 microphone holder and the ECM-670 microphone are already attached. Attach the supplied wind screen to the microphone, if necessary.

If you exchange the microphone for a long one such as the C-74, detach the microphone holder and reattach it to the position for a long microphone. Then attach the microphone.

DXC-537AH/537APH kit: Attach the CAC-12 microphone holder and a microphone (neither supplied). Choose where to attach the CAC-12 depending on the length of your microphone.

This section explains how to attach the CAC-12 microphone holder, and the microphone supplied with the video camera kit as an example.

Attaching the microphone holder

Positions to attach the microphone holder

This unit is provided with two positions for the microphone holder. Choose the appropriate position according to the length of your microphone.

Positions to attach the microphone holder

Attaching the microphone holder

- 1** Remove the two screws from one of the two positions for the microphone holder.

- 2** Attach the CAC-12 microphone holder using the screws removed in step 1.

Attaching a microphone

- 1** Loosen the microphone holder bolt and open the holder. (If your microphone holder is not the supplied one, take out the microphone adaptor from the holder.)

Attaching the Basic System Components

- 2** For the ECM-670, attach the microphone adaptor to the grip. (It is not necessary for the ECM-672 and C-74.)

- 3** Insert the microphone into the microphone holder, close the holder and tighten the bolt.

- 4** Checking the ← mark on the connector, insert the microphone cable connector into the MIC IN connector until it locks. Fix the cable along the clamp.

Adjusting the position of the microphone

Loosen the microphone fastening lever, adjust the position of the microphone and tighten the lever.

Adjusting the position of the microphone

Detaching the microphone

Follow the microphone attaching procedures in the reverse sequence. To remove the cable from MIC IN connector, pull out the cable while pressing the button on the connector.

Packing in the carrying case

The camera head can be packed with the microphone attached. Loosen the microphone fastening lever, lower the microphone fully, and tighten the lever.

Attaching the Basic System Components

Attaching the Chest Pad

The use of the CAC-4 chest pad (optional) gives you steadier support for the camera.

Attaching the chest pad

- 1 Detach the shoe from the bottom of the camera.

- 2 Place the chest pad between the shoe and the bottom of the camera and tighten them with four screws (+K 4 × 25) supplied with the CAC-4.

- 3 Detach the stopper from the bottom of the camera.

- 4** Insert the rear spacer (supplied with the CAC-4) onto the stopper, and tighten them with two screws (M2 bolts with hexagonal hole, supplied with the CAC-4) using an L-wrench.

- 5** Carry the camera on the shoulder, adjust the angle of the chest pad, and tighten the screw.

When the chest pad is not in use

Loosen the screw, place the pad against the bottom of the camera and tighten the screw.

Attaching the Basic System Components

Attaching a Tripod

Fit the camera to the VCT-14 tripod adaptor and attach it to a tripod for stable operation.

Attaching the camera to a tripod

- 1** Attach the V wedge (supplied with the tripod) to the tripod adaptor, and insert the V wedge into the V wedge shoe on the tripod. If the tripod does not have the V wedge shoe, fit the screw at the top of the tripod stand into one of the holes in the tripod adaptor. Choose the hole that fits the screw and gives the best balance.

- 2** Slide the camera forward along the adaptor grooves until the camera clicks into place.

Detaching the camera from the tripod

While pressing the red button, push the lever in the direction indicated by the arrow and detach the camera from the adaptor by sliding it backward.

Detaching the camera from the tripod

After detaching the camera

If the holding pin does not go to its stowed position, press the red button against the lever and move the lever in the direction of the arrow until the pin drops down. Otherwise, you cannot remount the video camera onto the tripod adaptor.

Returning the holding pin to its stowed position

Attaching the Basic System Components

Using the Soft Case and Rain Cover

Using the soft case

Use an optional LC-304SFT soft case when you want to carry the camera conveniently.

LC-304SFT soft case

Using the rain cover

Using an optional LCR-1 rain cover, you can operate the camera even in drizzling rain. (However, please note that the rain cover is not waterproof.)

LCR-1 rain cover

Connecting a Portable VTR

Use an optional CA-537/537P or CA-327/327P camera adaptor to connect a portable VTR. Depending on the connected VTR, set the VTR SELECT switch on the camera adaptor to the correct position.
For VTRs and their matching camera adaptor and camera cable, see page 2-4.

Check Before Connecting

Make sure the power switches on the camera, camera adaptor, VTR and other equipment are set to OFF.

Connection Diagram

Using a camera cable, connect the CAMERA IN connector of the portable VTR to the VTR/CCU/CMA connector on the camera adaptor.

Connecting example for a portable VTR

About the camera cable

- Use a camera cable that fits the CAMERA IN connector of the VTR to be connected. (See page 5-10.)
- The camera cable can be extended up to 10 meters (33 feet). For details, please consult your Sony dealer.
- When connecting a VTR made by a manufacturer other than Sony, please consult your Sony dealer.

About the video monitor

- If you use an S-VHS VTR, use of a video monitor with S video connectors is recommended. Connect a cable between the S video output connector* of the VTR and the S video input connector of the monitor to get pictures of high resolution.
- The signal from the VIDEO OUT connector of the DXC-537A/537AP is a composite video signal. Connect the VIDEO OUT connector to a composite video input connector of the monitor.

Attaching the Basic System Components

Setting the VTR SELECT switch on the camera adaptor

The VTR SELECT switch on the camera adaptor selects the type of the video output signal from the VTR/CCU/CMA connector and the microphone output level. Set it correctly depending on the connected VTR.

Example: CA-537/537P camera adaptor

Setting the VTR SELECT switch on the camera adaptor

Setting the VTR SELECT switch on the CA-537/537P

VTR to be connected	Position of the VTR SELECT switch	Video output signal	Microphone output level
Sony VTR for broadcasting, business and institutional use (BVU-150/150P, VO-6800/6800PS ¹⁾ , BVW-50/50P, BVV-5/5PS)	1	Composite (BVU-150/150P, VO-6800/6800PS) or component (BVW-50/50P, BVV-5/5PS)	-60 dB
Sony VTR for business and institutional use (VO-8800/8800P, EVV-9000/9000P)	3	Y/C	-60 dB
Panasonic VHS format VTR (AG-6400)	2	Composite	-20 dB
Panasonic S-VHS VTR (AG-7400 ²⁾) JVC S-VHS VTR (BR-S405)	3	Y/C	-20 dB

Setting the VTR SELECT switch on the CA-327/327P

VTR to be connected	Position of the VTR SELECT switch	Video output signal	Microphone output level
Sony VTR for broadcasting, business and institutional use (BVU-150/150P, VO-6800/6800PS ¹⁾)	1	Composite	-60 dB
Sony VTR for business and institutional use (VO-8800/8800P, EVV-9000/9000P)	2	Y/C	-60 dB
Panasonic VHS format VTR (AG-6400)	3	Composite	-20 dB
Panasonic S-VHS VTR (AG-7400 ²⁾)	4	Y/C	-20 dB

1) Set the microphone level on the VO-6800/6800PS to -60 dB.

2) Set the input selector on the AG-7400 to Y/C.

Power Sources

The DXC-537A/537AP is powered by one of the following power supplies:

- ❶ Power supplied through the DC IN connector of the dockable VTR or camera adaptor.
- ❷ Battery pack installed in the dockable VTR or camera adaptor.
- ❸ Power supplied through the VTR/CCU/CMA connector of the camera adaptor.

The power is supplied to the 50-pin connector of the camera through the VTR or camera adaptor.

When two or three power sources (❶ to ❸ above) are connected simultaneously, the camera operation only uses one of the power supplies according to the following priority, ❶, ❷ and ❸. The other power sources are automatically cut off.

Using a Battery Pack

Insert a battery pack, such as the NP-1B/1A (optional), into the battery case of a dockable VTR or camera adaptor.

Charging a battery pack

Charge the battery pack before each use using the battery charger shown in the table below.

Battery chargers and charging time		
Battery pack	Battery charger	Charging time (at 25°C)
NP-1B	BC-1WA ¹⁾ /1WB or BC-410/410CE	Approx. 95 min.
NP-1A	BC-1WA ¹⁾ /1WB or BC-410/410CE	Approx. 70 min.
BP-90A	BC-410/410CE/210	Approx. 160 min.

1) The BC-1WA battery charger cannot charge the NP-1B sufficiently.

Power Sources

Installing the battery pack

- 1 Open the battery case lid.

- 2 Insert the battery pack into the battery case and close the lid.

Continuous battery operation time

A fully charged battery pack can continuously power the camera and the DXF-501/501CE viewfinder for a certain amount of time.

The following table shows the continuous camera operation time or continuous recording time at 25°C, using a fully charged battery pack.

Camera operation time using a battery pack			
Equipment to be used Battery pack	Operation with a camera adaptor	Recording with EVV-9000/9000P	Recording with PVV-1/1P
NP-1A	Approx. 80 min.	Approx. 50 min.	Approx. 45 min.
NP-1B	Approx. 105 min.	Approx. 70 min.	Approx. 65 min.
BP-90A ¹⁾	Approx. 245 min.	Approx. 160min.	Approx. 150 min.

1) The DC-210 battery case is required to use the BP-90A with the camera adaptor.

Battery indicator

When the battery is nearly exhausted, the battery voltage value (11.0 V or less) appears on the viewfinder screen. If you continue to operate the equipment without changing the battery, the BATT indicator in the viewfinder also lights up to indicate that the battery must be replaced immediately.

Notes on using the battery pack

- Do not touch any metal object to the metal parts of the battery pack.
- Turn off the power before changing the battery pack.

Tips for using the NiCd battery pack

On battery duration

- Battery duration is shortened in a cold environment.
- Battery duration is shortened if the metal parts (terminals) are not clean.

On charging

- Charge the battery at temperatures from 5°C to 40°C (from 41°F to 104°F). Lower temperatures require a longer charging time. Besides, the battery cannot be charged fully if the battery pack is heated up (more than 40°C) just after use.
- Charge the battery pack a day before each use, since the battery will discharge if it is installed in the VTR or camera adaptor with the power off.
- Charge the battery pack after it is used up completely. Repeated charging of a still usable battery will cause lowering its capacity.
- If the capacity of the battery pack is lowered due to light charging and discharging cycles, discharge it completely, and then charge it sufficiently. This will recover the battery capacity.
- If the battery pack is not used for a long time, the battery duration will be shorter than normal even after a full charge. The duration, however, will recover after several charging and discharging cycles.
- A battery pack can be fully charged and discharged about 300 to 500 times.

On storage

Store battery packs in a cool, dry place.

Power Sources

Using an AC Power Supply

To operate the camera on AC power, connect the power sources as follows:

To power the camcorder system

Connect the CMA-8A/8ACE camera adaptor to the DC IN connector of the dockable VTR and to an AC outlet.

To power the portable VTR system

Connect the portable VTR to the VTR/CCU/CMA connector of the camera using an appropriate camera cable. Then connect the CMA-8A/8ACE camera adaptor to the VTR and to an AC outlet.

Turning on the Power

After you attach and connect other equipment, turn on the power.

When using a camcorder system

Turning on the power of a camcorder system

- 1 Set the POWER switch on the VTR to ON.
The power is supplied to both the VTR and the camera.
- 2 Set the POWER switch on the camera to ON SAVE or ON STBY. The camera is turned on and the image is shown in the viewfinder.

When using a portable VTR system

Turn on the power of a portable VTR system

- 1 Set the POWER switch on the VTR or camera control unit to ON.
The power is supplied to the camera.
- 2 Set the POWER switch on the camera to ON SAVE or ON STBY. The camera is turned on and the image is shown in the viewfinder.

Turning on the Power

Functions of the POWER switch on the camera

The POWER switch has three positions.

Functions of the POWER switch

Position	Functions
OFF  OFF ON STBY +SAVE+	Turns the camera off.
ON SAVE  OFF ON STBY +SAVE+	Select to save power. The VTR enters power saving mode (drum heads do not rotate). It saves battery power when adjusting the camera or when the VTR is not used during a rehearsal. When you press the VTR button in this mode, there is a delay of a few seconds before recording starts. It is useful when you do not need to start recording immediately.
ON STBY  OFF ON STBY +SAVE+	Select for a standby mode. The camera is turned on and the VTR stands ready for recording. When you press the VTR button on the camera, lens or camera adaptor, recording starts immediately. It is convenient when you do not want to miss important scenes.

Note

The functions of the VTR in the ON SAVE and ON STBY modes differ depending on the VTR. For example, even if the switch is set to ON SAVE, the EVV-9000/9000P is not in the power saving mode. Please see the manual of the VTR.

Adjustments Before Shooting

This section explains the adjustments necessary before shooting. Do not fail to make these adjustments when you use the camera for the first time. From the second time on, make the adjustments as necessary, according to the following table.

Type of adjustments before shooting	
Type of adjustments	Adjustment is necessary when:
Adjusting the diopter of the viewfinder	the camera operator changes.
Adjusting the contrast and brightness of the viewfinder	the lighting condition changes.
Adjusting the color of the video monitor	<ul style="list-style-type: none"> the lighting condition changes. the distance between the monitor and the camera operator changes. the monitor is changed.
Adjusting the flange focal length of the lens	the lens is changed. (The DXC-537AK/APK includes the lens and the adjustment is made at the time of shipment.)

Adjusting the Diopter of the Viewfinder*

Because the eyesight of each individual is different, it may be necessary to adjust the diopter¹⁾ whenever a new camera operator uses the viewfinder. Turn the diopter ring inside the eye piece to adjust.

Adjusting the diopter of the viewfinder

- 1 Set the POWER switch to ON SAVE.
An image appears on the viewfinder screen.
- 2 Turn the diopter ring so that you can see the image on the viewfinder screen clearly.

The range of the diopter is -1D to -3D. (Some individuals may not notice the difference in adjustment due to their eye flexibility.)

1) Diopter

A unit to indicate the degree of convergence or divergence of a bundle of rays.
-1D is set at the time of shipment.

Adjustments Before Shooting

Adjusting the Contrast and Brightness of the Viewfinder

Adjust the contrast and brightness using the color bar signals on the viewfinder screen. The adjustment does not affect the video output signal of the camera.

Adjusting the contrast and brightness of the viewfinder

- 1 Set the POWER switch to ON SAVE.
- 2 Set the OUTPUT switch to BARS.
The color bar signals are displayed on the viewfinder screen.
(If TONE SET is ON on the menu display, the audio reference signal sounds.)
- 3 Adjust the contrast and brightness using the CONTR and BRIGHT controls on the viewfinder while viewing the viewfinder screen.
- 4 After adjustment, set the OUTPUT switch to CAM.

About the iris after adjustment

When you set the OUTPUT switch to BARS, the camera automatically changes to shading mode. If the iris selector on the lens is set to M (manual), the camera remains in the shading mode even if the OUTPUT switch is set back to CAM. Open the iris before you start shooting.

Adjusting the sharpness on the viewfinder

Set the PEAKING switch on the viewfinder to ON.
The image on the viewfinder screen sharpens so that the lens can be focused easily.

Adjusting the Color of the Video Monitor

Adjust the color tone and brightness (black level) of the monitor using the color bar signals (SMPTE¹⁾ color bars) in the camera. Readjust the brightness when the lighting conditions or the distance between the monitor and the camera operator changes.

Adjusting the color of the video monitor

- 1** Set the POWER switch on the camera to ON SAVE.
- 2** Set the OUTPUT switch on the camera to BARS.
The color bar signals are displayed on the monitor screen.
(If TONE SET is ON on the menu display, the audio reference signal sounds.)
- 3** Set the BLUE ONLY switch on the monitor to ON.
Monitor screen turns to blue monochrome and blue stripes appear.
- 4** Adjust the two bars as indicated below with the CHROMA control on the monitor so that they have the same brightness.

Brightness adjustment by CHROMA control

Adjustments Before Shooting

- 5** Adjust the two bars as indicated below with the PHASE control on the monitor so that they have the same brightness.

Brightness adjustment by PHASE control

- 6** Repeat procedures 4 and 5 until the four bars have the same brightness.
When they are the same, the adjustment of color tone is finished.
- 7** Return the monitor to the normal mode.
- 8** Adjust the brightness of the bars as indicated below with the BRIGHT control on the monitor.

Brightness adjustment by BRIGHT control

The adjustment of the brightness (black level) is now finished.

- 9** Set the OUTPUT switch on the camera to CAM.

About the Iris after adjustment

When you set the OUTPUT switch to BARS, the camera automatically changes to shading mode. If the iris selector on the lens is set to M (manual), the camera remains in the shading mode even if the OUTPUT switch is set back to CAM. Open the iris before you start shooting.

¹⁾ SMPTE

Abbreviation for the Society of Motion Picture and Television Engineers

Adjusting the Flange Focal Length* — When the Lens is Changed

Flange focal length means the length between the lens attachment surface and the image formation surface. Adjust the flange focal length without fail when:

- you mount a lens for the first time (The DXC-537AK/537APK kit includes a lens and the adjustment is already made at the time of shipment.)
- you change a lens
- the lens does not stay properly in focus both at the wide-angle and telephoto positions when using the zoom.

Once you have made the flange focal length adjustment, you do not have to readjust the lens as long as the lens stays on the camera.

Adjusting the flange focal length

- 1 Set the iris selector to M.
- 2 Open the iris by turning the iris ring.
This provides a shallow depth of field and easy observation of focusing.
- 3 Position the supplied chart for flange focal length adjustment about 3 m (10 ft) away from the camera, and light it enough to provide a sufficient video output level (about 80 IRE* for NTSC or 560 mV for PAL, on the waveform monitor).
- 4 Set the ZOOM selector to M (manual) and turn the manual zoom lever to the telephoto position.

Adjustments Before Shooting

- 5 Focus on the chart by turning the focus ring.
- 6 Turn the manual zoom lever to the wide-angle position.
- 7 Loosen the screw on the Ff adjustment ring.
- 8 Turn the Ff adjustment ring and focus on the chart. Be careful not to disturb the focus ring.
- 9 Repeat procedures 5 through 8 until the chart is in focus both at the telephoto and wide-angle positions.
- 10 Tighten the screw on the Ff adjustment ring.

For more precise adjustment

Use a waveform monitor. The highest wave amplitude is the point in focus.

For adjusting outdoors

If it is too bright to open the iris, use a high-speed shutter or an ND filter*.

Chapter 3 Shooting — Basic Operations

This section explains how to shoot using the automatic adjustments of this camera. It also explains the black balance and white balance adjustments which are required in all the color adjustments of the camera.

Basic operations for the camcorder system and portable VTR system are explained here. For other systems, also see Chapter 5.

Basic Shooting/Recording	3-2
Setting the Switches/Selectors	3-2
Videotaping Operations	3-4
Adjusting the Black Balance	3-7
Adjusting the White Balance	3-9
Memorizing the Correct White Balance Values	3-9
Using a Preset White Balance Value	3-12
Using the ATW (Auto Tracing White Balance) Function	3-13
Tips on the White Balance Adjustment	3-14
Zooming	3-15
Motorized Zooming	3-15
Manual Zooming	3-16
Close-ups	3-17

Basic Shooting/Recording

This section explains how to shoot simply using the automatic adjustment functions of the camera. In order to make full use of the camera, it is necessary to make various adjustments depending on the shooting conditions. (See chapter 4.)

The operating procedures are as follows:

- 1 Check that all the switches/selectors on the camera are set to the standard position.
- 2 Point the camera at an object.
- 3 Start/stop recording.

Setting the Switches/Selectors

Check that the switches/selectors are set to the following positions:

Setting the switches/selectors

Standard position of the switches/selectors

Switch/selector	Standard position	Remarks	See page
A. IRIS MODE	STD	—	4-7
ATW	OFF	Set to ON when the white balance needs to be adjusted immediately.	3-13
GAIN	LOW	—	4-5
OUTPUT	CAM (DCC ON)	—	4-7
EVS	OFF	—	4-7
TURBO GAIN	OFF	—	4-6
MATRIX	STD	Set to FL under the fluorescent lights.	4-7
Camera	SHUTTER	OFF	4-12
	CLOCK	OFF	4-19
	LOW CUT	OFF	—
	MIC POWER	ON	—
	FILTER	The best position	3-3
		Select depending on the light sources.	
Lens	Iris selector	A (auto)	4-2
	ZOOM	S (servo)	3-16

Selecting the optical filters

Select the position of the FILTER selector depending on the lighting conditions of the subject.

Position of the FILTER selector and lighting conditions

Position of the FILTER selector	Lighting conditions
1 3200 K	Halogen lamp for studio use, tungsten lamp (incandescent bulb), sunrise and sunset.
2 5600 K + 1/4 ND ¹⁾	Bright outdoors The amount of light is attenuated to 1/4 (two stops down on the iris).
3 5600 K	Cloudy or rainy outdoors, or under a fluorescent lamp.
4 5600 K + 1/16 ND	In the open daylight. The amount of light is attenuated to 1/16 (four stops down on the iris). Used to prevent hunting* or to decrease the depth of field*.

1) ND

An ND (Neutral Density) filter*. It reduces the amount of incident light.

Basic Shooting/Recording

Videotaping Operations

Videotaping operations

- 1 Remove the lens cap.
- 2 Set the POWER switch on the VTR to ON.
- 3 Set the POWER switch on the camera to ON STBY or ON SAVE.

Setting the POWER switch

Position of POWER switch	Operating conditions
ON STBY	The camera is turned on and the VTR stands ready for recording. When you press the VTR button on the camera, lens or camera adaptor, recording starts immediately.
ON SAVE	The camera is turned on and the VTR enters the power saving mode (drum heads do not rotate). When you press the VTR button in this mode, recording starts in several seconds.

Note

The functions of the VTR in the ON SAVE and ON STBY modes differ depending on the VTR.

- 4 Point the camera at an object.
 - When taking close-ups of a subject that is at a close distance of less than one meter, use the macro function. (see page 3-17)
- 5 Adjust the focus by turning the focus ring while looking at the image in the viewfinder (or video monitor).
 - Use the zoom* to change the size of the subject. (see page 3-15)

- 6** Start recording by pushing one of the following buttons:
- When using a tripod: VTR button on the camera
 - When carrying the camera on the shoulder: VTR button on the zoom lens
 - Using a portable VTR system on a tripod: VTR START/RETURN VIDEO button on the camera adaptor

The REC/TALLY indicator inside the viewfinder lights during recording.

Pausing during recording

Press the VTR button. The REC/TALLY indicator disappears and the VTR stops recording temporarily (recording standby mode). To resume recording, press the VTR button again.

After shooting

Set the POWER switch on the camera and VTR to OFF.

Basic Shooting/Recording

Monitoring the image during recording

During recording, the image shot with the camera is displayed on the viewfinder. If you press the RET button on the lens, the viewfinder displays the image to be recorded on the VTR (return video*) while the button is being pressed. The display returns to the image of the camera when you release the button.

Monitoring the return video using the RET button

Note

This function does not operate with some VTRs.

Checking the last portion of the recording

You can monitor in the viewfinder the last few seconds of the tape you have just recorded.

Checking the recorded portion using the REC REVIEW button

After making the VTR pause by pressing the VTR button, press the REC REVIEW button on the camera. The last few seconds before the VTR pauses are rewind automatically, and the viewfinder displays the played back image. When the VTR finishes playback, the VTR returns to the recording standby mode.

Note

This function does not operate with some VTRs.

Adjusting the Black Balance

Adjust the black balance when the camera has not been used for a long period of time, or when the temperature has suddenly changed. The adjusted black balance value is retained in the memory of the camera and normally you do not need to readjust it even if you turn off the camera power or the lighting conditions change. When the black balance is adjusted, the black set* is also adjusted automatically.

Black balance adjustment

- 1 Set the POWER switch to ON SAVE, and OUTPUT switch to CAM.
- 2 Flip the AUTO W/B BAL. switch to the BLK position.
The iris closes automatically and the black balance is adjusted automatically. During the adjustment, "AUTO BLACK -OP-" appears on the viewfinder screen.

Viewfinder display during black balance adjustment

A few seconds later, "AUTO BLACK -OK-" appears on the viewfinder screen, when adjustment is complete. The adjustment value is automatically retained in the memory.

Note

When the W/B BALANCE switch on the camera control unit is set to MANUAL, you cannot adjust the black balance from the camera.

Adjusting the Black Balance

If the black balance cannot be adjusted

"AUTO BLACK -NG-" appears on the viewfinder screen. Readjust the black balance after you take the appropriate measures.

Error messages for the black balance adjustment

Error message	Meaning and countermeasures
AUTO BLACK -NG- IRIS NOT CLOSED TRY AGAIN	The iris was not closed during the black balance adjustment. Check the lens and its connections. If the black balance still cannot be adjusted, call your Sony dealer.
AUTO BLACK -NG- ?? TRY AGAIN	The iris was opened during black balance adjustment, or a hardware error occurred. Close the iris and try the adjustment again. If the black balance still cannot be adjusted, call your Sony dealer.
BARS	The color bar signal is output. Set the OUTPUT switch to CAM.

About the Iris after the adjustment

The iris of the lens automatically closes during black balance adjustment. If the iris selector is set to M (manual), the iris remains closed after the adjustment. Therefore, open the iris before shooting.

Readjustment of the black balance

Readjust the black balance if:

- "MEMORY NG" appears on the viewfinder screen
- the unit has not been used for a long time
- the ambient temperature has changed considerably.

Adjusting the White Balance

The white balance should be adjusted so that a white object is reproduced as white and life-like color is obtained. The white balance changes depending on the lighting conditions. When the lighting conditions change, readjust the white balance.

Memorizing the Correct White Balance Values

You can store the adjusted white balance values in the two memories of "A" and "B". The values are retained even if the power of the unit is turned off. Once the values are memorized, you can recall either of them by setting the WHITE BAL selector to A or B. It is convenient when you shoot under two different lighting conditions.

Memorizing the white balance value

- 1 Set the positions of the switches/selectors on the camera as follows:
 - Set the POWER switch to ON SAVE.
 - Set the OUTPUT switch to CAM.
 - Set the iris selector on the lens to A (auto).
 - Set the ATW switch to OFF.
- 2 Select the position of the FILTER selector on the camera according to the lighting conditions.
- 3 Set the WHITE BAL selector to A or B.

Adjusting the White Balance

- 4 Zoom up on a white object such as a white cloth or paper under the same lighting conditions as those of the scene to be shot. The minimum white area required for adjustment is as follows:

- 5 Flip the AUTO W/B BAL switch to WHT. White balance is automatically adjusted. During the adjustment, "AUTO WHITE -OP-" appears on the viewfinder screen.

Viewfinder display during white balance adjustment

When the display changes to "AUTO WHITE -OK-" after a few seconds, the adjustment is complete. The camera automatically stores the adjusted white balance value in the specified memory, A or B.

If you want to set the white balance value for another lighting condition, repeat procedures 2 through 4. The camera can memorize two white balance values, A and B.

Recalling the white balance value from the memory

Set the WHITE BAL selector to A or B before you shoot with the camera. The white balance value in the memory is automatically recalled. Even if the power is turned off, the camera holds the stored white balance value in memory for about 10 years unless the white balance is readjusted.

If an adjustment error occurs

If the unit fails to adjust the white balance, "AUTO WHITE -NG-" appears on the viewfinder screen.

Readjust the white balance after taking the appropriate measures indicated in the table below.

Error messages for the white balance adjustment

Error message	Meaning and countermeasures
AUTO WHITE -NG- LOW LIGHT TRY AGAIN	Light is insufficient. Increase illumination, open the iris or raise the video output level with the GAIN selector. Check also the FILTER selector setting. Try the adjustment again after taking the countermeasure.
AUTO WHITE -NG- ?? TRY AGAIN	The object is not white or light is excessive. Replace with a white object. Decrease illumination, close the iris or reduce the video output level with the GAIN selector. Check also the FILTER selector setting. Try the adjustment again after taking the countermeasure.
AUTO WHITE -NG- : C. TEMP LOW CHG. FILTER TRY AGAIN	Color temperature is too low. Set the FILTER selector to 1 and try the adjustment again.
AUTO WHITE -NG- : C. TEMP HI CHG. FILTER TRY AGAIN	Color temperature is too high. Set the FILTER selector to 3 or 4 and try the adjustment again.
WHITE: PRESET	The WHITE BAL selector is set to PRE. Set the WHITE BAL selector to A or B.
BARS	The color bar signal is output. Set the OUTPUT switch to CAM.

Adjusting the White Balance**Using a Preset White Balance Value**

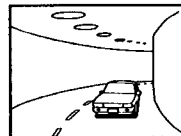

The unit provides two preset white balance values. When you have no time to adjust the white balance, the preset values can provide an approximate adjustment for immediate shooting.

In some cases under special lighting conditions, using the preset values is more effective than adjusting the white balance due to the characteristics of the human eye.

- 1** Set the WHITE BAL selector to PRE.
- 2** Set the FILTER selector to position 1 for the 3200 K white balance.
Set it to 3 for the 5600 K white balance.

Situations where the preset white balance is effective

Situations where the preset white balance is effective

Lighting conditions	Preset value
<ul style="list-style-type: none"> Situations where lighting conditions frequently change, such as at a party. 	3200 K (FILTER selector position 1)
<ul style="list-style-type: none"> Shooting under a sodium lamp in a tunnel. 	
<ul style="list-style-type: none"> Shooting sunrise or sunset outdoors. 	5600 K (FILTER selector position 3)

If you want to reproduce a scene more precisely, adjust the R and B signal levels using the RM-M7G remote control unit.

Using the ATW (Auto Tracing White Balance) Function

When you use the ATW function, the white balance varies automatically according to changes in the lighting conditions.

Note

The ATW function cannot provide perfect white balance adjustment. If you want to record a color of a subject correctly, we recommend that you to adjust the white balance with the AUTO W/B BAL switch.

Using the ATW function

Using the ATW function

Set the ATW switch to ON. The "ATW" display appears on the viewfinder screen. The white balance is held at its optimum level during recording, according to the changes in the color temperature of the subject.

Canceling the ATW function

Set the ATW switch to OFF. "ATW" disappears from the viewfinder screen.

If an error occurs

If the unit fails to obtain the optimum value with the ATW function, one of the following messages appears on the viewfinder screen. Take the measures listed in the table below.

Error messages for the ATW function

Error message	Meaning and countermeasures
C. TEMP LOW	Color temperature is too low. Set the FILTER selector to 1.
C. TEMP HI	Color temperature is too high. Set the FILTER selector to 3 or 4.

Adjusting the White Balance

Tips on the White Balance Adjustment

Light source and color temperature

In order to obtain an image with correct color, it is necessary to adjust the white balance according to the light source which lights the subject. The color of the light is determined by the temperature of the object radiating the light, and is expressed by the unit "K." As the temperature increases, the color of the light changes to blue, and as it decreases, to red.

This unit is adjusted at the factory so that the correct colors are obtained when a video light (halogen lamp, color temperature 3200 K) is used. When using the unit under different lighting conditions, adjustment is required. Before white balance adjustment, set the FILTER selector to select a lighting condition close to the current light. Use the following table for the adjustment of the color temperature.

Light source and color temperature		
Light source		Color temperature (K)
Natural light	Lighting	
Clear sky		10,000
Slightly overcast		8,000
Cloudy, rainy		7,000
	Fluorescent lamp (daylight)	6,000
		5,000
Direct sunlight, midday	Mercury lamp	
	Fluorescent lamp (white)	
1 hour before sunset or after sunrise		4,000
	Fluorescent lamp (off white)	3,500
	Studio lamp	3,200
	Halogen lamp, video light	3,000
30 min. before sunset or after sunrise	Tungsten lamp	2,500
	Sodium lamp (lights inside a tunnel)	
Sunset or sunrise	Candle light	2,000

Zooming

By using the motorized zoom, or by zooming manually, you can make the size of the subject large (telephoto shot) or small (wide-angle shot), without changing the position of the camera.

With the MACRO function, you can do close-ups of a small subject or very close subject.

This section explains zooming and close-ups, using the VCL-916BYA zoom lens supplied with the DXC-537AK/537APK as an example.

Motorized Zooming

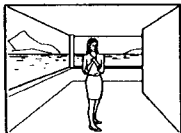

Motorized zooming allows you to change the size of an object in the viewfinder screen smoothly.

Motorized zooming

Set the ZOOM selector to S (servo). Press all the way down on the motorized zoom switch to zoom faster, and press lightly to zoom slowly.

Zooming in/out operation

Operation	Motorized zoom switch
To zoom in 	Press the T (Telephoto) side.
To zoom out 	Press the W (Wide) side.

Zooming

Manual Zooming

Manual zooming enables more precise control over the zooming speed.

Manual zooming

Set the ZOOM selector to M, and rotate the zoom lever. By changing the speed of rotating the zoom lever, you can vary the zooming speed.

Going to wide angle (zoom in)	Rotate the zoom lever upward.
Going to telephoto (zoom out)	Rotate it downward.

Tips on zooming

Focusing

If the object is in focus in the telephoto position, it will remain in focus when you zoom out to wide angle.

For smoother zooming

We recommend that you place the unit on a tripod. Camera shaking is especially conspicuous when zooming in.

Positioning the object in the center of the screen

To zoom in, compose the scene so that the object is at the center of the screen at the telephoto position, and set to the wide angle position. Then start to zoom in. Make sure that the object stays at the center of the screen while you are zooming.

Close-ups

Use the MACRO function when the distance from the lens to the object is less than 1 meter (less than 0.9 meter for VCL-916BYA). The minimum distance is 10 mm (wide angle position, $f = 9$ mm) in the macro zoom position.

Close-ups

- 1 Bring the lens closer to the subject until the desired image size is obtained.
- 2 Set the focus ring to the minimum distance position (0.9 for VCL-916BYA).
- 3 While sliding the MACRO button toward the camera head, rotate the MACRO ring in the direction of the arrow (upward) until it stops.
- 4 Set the ZOOM selector to M and rotate the manual zoom lever to focus.

After close-ups

Rotate the MACRO ring in the opposite direction of the arrow (downward) until it stops.

To decrease the size of the subject

After procedures 1 through 4, rotate the MACRO ring in the opposite direction of the arrow a little, and focus again with the zoom lever.

Tips on close-ups

The depth of field is narrow when doing the close-ups. Make sure to adjust the diopter and focus carefully.

Chapter 4 Shooting — Advanced Operations

This chapter explains in detail how to choose camera settings, according to each shooting condition.

Adjusting the Exposure	4-2
Adjusting the Iris	4-2
Manual Iris Adjustment with the Zebra Pattern	4-4
Selecting the Gain	4-5
Increasing the Gain in Three Increments with the GAIN Selector	4-5
Increasing the Gain to 30 dB with the TURBO GAIN Switch	4-6
Shooting Various Subjects Under Different Lighting Conditions (Switch Settings)	4-7
Functions of Switches/Selectors	4-7
Switch Settings Corresponding to the Shooting Conditions	4-8
Shooting with Special Effects (Menu Operation)	4-9
Changing the Settings in the Menu	4-9
Menu Display Items and Setting Values	4-11
Using a High Shutter Speed	4-12
Shooting a CRT such as a Computer Screen (Clear Scan Function)	4-15
Displaying the Marker in the Viewfinder	4-17
Recording the Date and Time of Shooting	4-19
Setting the Clock	4-19
Recording the Date and Time of Shooting	4-20
Recording a Title	4-21
Making and Memorizing a Title	4-21
Recording a Title	4-23

Adjusting the Exposure

There are three methods of exposure adjustment.

- Automatic iris adjustment
- Manual iris adjustment
- Temporary automatic iris adjustment

You can set the iris to adjust itself automatically according to the brightness of the object being shot. When you need a special effect, adjust it manually.

Use the instant automatic iris adjustment setting for temporary automatic adjustment of the iris during the manual adjustment.

Adjusting the Iris

Adjusting the iris

Adjusting the Iris automatically

Set the iris selector to A (auto). The unit automatically adjusts the iris for the appropriate exposure according to the brightness of the subject to obtain an image with the appropriate brightness.

Adjusting the iris manually

Set the iris selector to M (manual), and adjust the iris manually by rotating the iris ring. Use the following table as a reference.

Manual iris adjustment

Condition	Adjustment of Iris
The background is so bright that the subject becomes a silhouette. (Backlighting)	Open the iris slightly.
The subject is too bright as compared with the background. (Spot-lit in the dark.)	Close the iris slightly.
Special effect is desired.	Adjust according to the situation.

Activating the automatic iris adjustment instantly

You can adjust the iris automatically during manual iris adjustment, by holding down the instant automatic iris adjustment button. Release the button when the adjustment is made. The automatically adjusted iris is retained as is. When changing the iris, adjust it manually by rotating the iris ring.

Example of effective use

If the lighting level of the scene to be shot constantly changes due to strobe lights or other lights, adjust the iris manually first. Whenever the brightness seems to have changed, press the instant automatic iris adjustment button.

Changing the reference level of the automatic iris adjustment

In automatic iris adjustment, a reference level is determined by detecting the peak value and average value of the brightness of the subject. Based on the reference level, the iris is automatically adjusted. Therefore, in special lighting conditions such as backlighting, it is better to change the reference level in order to obtain the proper exposure.

There are two methods of changing the reference level.

- Set the A. IRIS MODE selector on the camera to the appropriate position. (see page 4-7)
- Change the setting of A. IRIS on the menu display in the viewfinder. (see page 4-11)

Adjusting the Exposure

Manual Iris Adjustment with the Zebra Pattern*

The zebra pattern helps manual iris adjustment by indicating those areas of the picture where the video output level is about 70% to 80% ¹⁾IRE* (for NTSC) or 490 mV to 560 mV (for PAL). This pattern acts as a guide when you manually adjust the iris.

Displaying the zebra pattern

Displaying the zebra pattern

Set the ZEBRA switch to ON.

When shooting a person

Adjust the iris manually so that the zebra pattern appears on the bright portions of the face (forehead, cheeks, etc.).

When shooting a subject other than a person

Adjust the iris manually so that the zebra pattern appears on the part to be emphasized.

When you have no need for the zebra pattern

Set the ZEBRA switch to OFF.

1) 70% to 80%

"%" is a unit to express the brightness of an image. The brightness of an image shot with a camera is expressed as ranging from 0 to 100%.

Around 75% is the level where the colors of the subject are reproduced most faithfully.

Selecting the Gain

If you cannot get a clear picture because of insufficient light, increase the gain to brighten the picture.

There are two methods to increase the gain.

- Increasing the gain in three increments, LOW, MID and HIGH, using the GAIN selector.
- Increasing the gain to 30 dB using the TURBO GAIN switch.

In an ordinary operation, the GAIN selector is used. The TURBO GAIN switch is used when the lighting suddenly becomes dark.

Increasing the Gain in Three Increments with the GAIN Selector

Setting the GAIN selector

Set the GAIN selector to LOW, MID or HIGH. The selected gain level is displayed on the viewfinder screen for a few seconds. The following table shows the factory-preset gain level settings.

Factory-preset gain level settings

Position of GAIN selector	Preset gain
LOW	0 dB (no gain increase)
MID	9 dB
HIGH	18 dB

Set the GAIN selector to LOW (0 dB) in ordinary use.

Note

You cannot change the gain with the GAIN selector while the TURBO GAIN switch is set to ON.

Changing the gain level settings

The gain level for each position of the GAIN selector can be set within a range of -3 dB to 24 dB on the menu display.

For details, see "Changing the Settings in the Menu" on page 4-9.

Selecting the Gain

Increasing the Gain to 30 dB with the TURBO GAIN Switch

Increasing the gain to 30 dB with the TURBO GAIN switch

Set the TURBO GAIN switch to ON. The gain increases to 30 dB, and "TURBO" appears on the viewfinder screen and the GAIN UP indicator lights. Set the switch back to OFF after shooting. "TURBO" disappears from the viewfinder screen, and the gain returns to the previous setting.

Shooting Various Subjects Under Different Lighting Conditions (Switch Settings)

This unit is equipped with various functions to make possible shooting corresponding to the lighting condition and subject. This section explains how to use the switches/selectors for those functions. Make use of it to cope with the conditions under which you wish to shoot.

Functions of Switches/Selectors

Switches/selectors

Switches/selectors and their purposes

Switch/selector	Purpose
A. IRIS MODE selector 	Changes the reference level of the automatic iris adjustment according to the lighting conditions. STD: Standard position BACK L: When the subject is backlit. The average of the brightness is adjusted so that the subject appears brightly. SPOT L: When the subject is spotlighted. The peak level is adjusted so that the subject appears properly.
EVS switch 	ON: Activates the EVS (Enhanced Vertical Definition system) function to increase the vertical resolution from 400 lines to 450 lines (NTSC) or from 450 lines to 530 lines (PAL). OFF: Standard position
MATRIX selector 	Activates the color matrix function to change the color tone of the image. STD: Standard position H. SAT: Enhances the chroma. FL: Reproduces natural colors under the fluorescent light.
DCC switch 	ON: Standard position Activates the DCC (Dynamic Contrast Control) function to regain the color of a subject that has been whited out by bright light. OFF: Uses the whitening phenomenon in a highlighted scene to obtain a special effect.

Shooting Various Subjects Under Different Lighting Conditions (Switch Settings)

Switch Settings Corresponding to the Shooting Conditions

Switch settings corresponding to the shooting conditions

Shooting conditions	Switch/selector position	Effects
The subject becomes a silhouette because the background is too bright.	Set the A. IRIS MODE selector to BACK L.	Prevents the subject from becoming a silhouette.
The subject is spotlighted.	Set the A. IRIS MODE selector to SPOT L.	Prevents the person's face or clothes from becoming white.
A higher vertical resolution is needed, when shooting the eye lines of a woman, etc.	Set the EVS switch to ON.	The vertical resolution increases.
Shooting a wedding or similar elaborate scene	Set the MATRIX selector to H. SAT.	The color is reproduced vividly.
Shooting under a fluorescent lamp (which has no color)	Set the MATRIX selector to FL.	Prevents the image from getting bluish and the image is reproduced in natural colors.
Using the whitening phenomenon as a special effect. (For example, shooting a person walking in a desert with backlighting.)	Set the DCC switch to OFF.	The person seems to be walking in a white background.

Shooting with Special Effects (Menu Operation)

The unit is equipped with convenient functions which enable the cameraman to express minute image impressions, such as by opening the iris a little excessively too much, sharpening detail and increasing contrast. Make the settings on the menu display.

Items able to set on the menu display

Selectable items, their meanings and purposes

Menu Item	Meaning	Purpose
A. IRIS	Sets the reference level of the automatic iris adjustment.	To get a special effect by slightly over-exposing or under-exposing.
DETAIL	Sets the detail emphasis level.	To emphasize the details so that it can be dubbed by a VTR for consumer use without deterioration.
M.PED	Sets the master pedestal level to change the contrast of the image.	To make the contrast of the image higher or lower.
SHUTTER/CLS	Sets the shutter speed or scanning frequency of Clear Scan.	To shoot a fast-moving object or computer screen.
GAIN	Sets the gain level in each position of the GAIN selector.	To set the gain level for frequently used lighting conditions so that they can be obtained at a touch.

Changing the Settings in the Menu

Display the menu on the viewfinder screen and change the settings. The procedures are the same for all the menu display items.

Changing the settings in the menu

- 1 Push the DISP CHG switch several times until the following display appears on the viewfinder screen.

Shooting with Special Effects (Menu Operation)

Menu display

- 2** Push the DISP CHG switch repeatedly until the cursor comes to the left of the item to be adjusted.

If you push the DISP CHG switch downward	the cursor moves down.
If you push it upward	the cursor moves up.

Selecting the item

- 3** Change the setting by pressing the UP/ON and DOWN/OFF buttons.

If you press the UP/ON button	the value increases.
If you press the DOWN/OFF button	the value decreases.
If you press them simultaneously	the setting returns to the standard value.

Changing the setting

- 4** Push the DISP CHG switch several times until the normal display appears on the viewfinder screen.

Normal display

The set values are retained even if the power to the unit is shut off.

Menu Display Items and Setting Values

Menu display items, their meanings and setting ranges

Menu Item	Meaning	Setting range
A. IRIS	Setting the reference level of automatic iris adjustment	-1.0, -0.5, NORM (standard value), 0.5, 1.0 • As the value gets smaller, the iris closes, and as it gets bigger, the iris opens.
DETAIL	Setting the detail emphasis level	-99 to 00 (standard value) to +99 • The smaller the value, the softer the detail is, and the larger it is, the sharper.
M.PED	Setting the master pedestal level	MIN, -30 to 00 (standard value) to +30, MAX • The smaller the value, the darker the dark portion of the image becomes and the higher the contrast becomes. The larger the value is, the brighter the dark portion of the image gets and the lower the contrast becomes.
SHUTTER	Setting the shutter speed (when the SHUTTER switch is set to ON)	1/100 for NTSC or 1/60 for PAL (standard value), 1/250, 1/500, 1/1000, 1/2000 second • The smaller the denominator of the value is, the slower the shutter speed is, and the larger, the faster. <i>For details, see page 4-12.</i>
CLS	Setting the scanning frequency of Clear Scan (when the SHUTTER switch is set to CLS)	60.4 to 200.3 Hz for NTSC 50.3 to 201.4 Hz for PAL • The value indicates the scanning frequency of the Clear Scan. Set it while watching the image on a personal computer screen on the monitor so that the noise is the least. <i>For details, see page 4-15.</i>
GAIN	Setting the gain level in each position of the GAIN selector	-3, 0, 3, 6, 9, 12, 18, 24 dB (standard values: 0, 9, 18) • The figures indicate each position of LOW, MID, and HIGH of the GAIN selector from left to right. Push the DISP CHG switch to move the cursor to the left of the figure to be changed, and select by pushing the UP/ON and DOWN/OFF buttons. • You can set the three values only in the range of LOW < MID < HIGH.

Shooting with Special Effects (Menu Operation)

Using a High Shutter Speed*

If you increase the shutter speed, a fast-moving object can be shot with reduced blurriness. The flickering which occurs when shooting under the fluorescent lamp can also be reduced by changing the shutter speed. The shutter speed is factory-set to 1/100 for NTSC and 1/60 for PAL. You can select a shutter speed from the five settings, which are in the following order:

NTSC: 1/100, 1/250, 1/500, 1/1000, 1/2000

PAL: 1/60, 1/250, 1/500, 1/1000, 1/2000

Setting the shutter speed

Setting the shutter speed

- 1 Set the SHUTTER switch to ON.
The shutter speed is now selectable.
- 2 Push the DISP CHG switch several times until the menu display shown above appears on the viewfinder screen. Place the cursor to the left of SHUTTER.
- 3 Select the shutter speed by pressing the UP/ON or DOWN/OFF button. Settings change in the following sequence each time the UP/ON button is pressed.
1/100 for NTSC, 1/60 for PAL → 1/250 → 1/500 → 1/1000 → 1/2000 (factory setting)

If you press the DOWN/OFF button, the setting changes in the reverse sequence.
If the UP/ON and DOWN/OFF buttons are pressed simultaneously, the setting returns to 1/100 for NTSC, or 1/60 for PAL.

- 4 Push the DISP CHG switch several times until the normal viewfinder screen appears.

The selected speed appears on the viewfinder screen and the SHUTTER indicator lights.

The selected shutter speed is retained in the camera memory even if the power of the camera is turned off, unless it is readjusted.

After shooting

Set the SHUTTER switch to OFF. The SHUTTER display in the viewfinder screen disappears.

If you set the SHUTTER switch to ON again, the shutter speed changes to the speed selected in the menu display.

Notes on using the high shutter speed

- If the EVS switch on the camera is set to ON, you cannot change the shutter speed.
- The faster the shutter speed is, the darker the image is. Check the brightness on the viewfinder, and increase the lighting or adjust the iris if necessary.
- When you shoot a bright object with the fast shutter speed, the vertical smear might be obvious.

Shooting with Special Effects (Menu Operation)

Appropriate shutter speed to capture the movement of a subject

Appropriate shutter speed for each subject

Subject	Shutter speed
• Skiing	1/2000
• Moment of diving into water	1/1000
• Motor sports (straight)	
• Flow of water fall	
• Flapping wings of a bird	
• Facial expressions of athletes in competition	
• Skating, jumping, surfing	1/500
• Movement of a butterfly	
• Human movement	1/250
• Judo, karate, boxing	
• Athletic meeting, marathon	
• Motor sports (corners)	
• Gliding birds	
• Roller coaster on a overcast day	
• Scenery shot from a moving car or train	
• Stroboscopic shooting of a stationary animal	
• Flowers swinging in the wind	1/100 (for NTSC) or 1/60 (for PAL)
• Indoor sports	
• Mountains covered with snow or sunny seashore in the mid summer (replaces ND2 filter)	
• Shooting under a fluorescent lamp in an area where the electricity frequency is 50 Hz (for NTSC) or 60 Hz (for PAL).	

Shooting a CRT such as a Computer Screen (Clear Scan Function)

When you shoot the screen of a computer or projector, horizontal noise bands appear on the image. The noise occurs because the scanning frequency of the monitor screen differs from that of the camera. The Clear Scan function decreases the horizontal noise bands.

Decreasing the horizontal noise bands

Using the Clear Scan function

- 1 Set the SHUTTER switch to CLS.
- 2 Push the DISP CHG switch several times until the display shown above appears on the viewfinder screen. Place the cursor to the left of CLS.
- 3 Display the screen of a computer on the monitor.
- 4 While looking at the monitor, press the UP/ON or DOWN/OFF button until the frequency with the least noise is selected.
The settings change in the following range and sequence each time you press the UP/ON button.
NTSC: 60.4 Hz (factory setting) to 200.3 Hz
PAL: 50.3 Hz (factory setting) to 201.4 Hz

If you press the DOWN/OFF button, the setting changes in the reverse sequence.
If you press the UP/ON and DOWN/OFF buttons simultaneously, the setting returns to 60.4 Hz for NTSC or 50.3 Hz for PAL.

Shooting with Special Effects (Menu Operation)

- 5** Push the DISP CHG switch several times until the normal viewfinder screen appears.

The frequency of the Clear Scan is retained in the camera memory even if the power is turned off, unless it is readjusted.

After shooting

Set the SHUTTER switch to OFF. The Clear Scan function is now canceled. If you set the SHUTTER switch to CLS again, the Clear Scan function operates at the frequency selected in the menu display.

Note

As the vertical scanning frequency differs according to the type of computer, the horizontal noise bands may not be completely eliminated. Further, please note that the frequency also changes according to the software used.

Displaying the Marker in the Viewfinder

The safety zone (effective screen frame) and center marker* can be displayed on the viewfinder screen.

You can select the marker display as follows:

- Display both the safety zone and center marker.
- Display the safety zone only.
- The size of the safety zone can be set to either 90% or 80% of the screen area.

Displaying the marker in the viewfinder

Displaying the marker in the viewfinder

Set the MARKER switch to ON. The safety zone and center marker are displayed. If you set the MARKER switch to OFF, the safety zone and center marker disappear.

Changing the safety zone size

Generally, the image we see on the video monitor is not the whole image shot with the camera. About 75 to 90% of the image shot is displayed on the monitor so that a gap does not appear in the surrounding area even if the screen becomes smaller due to a change in the voltage. This is called over scan, and the over scan amount varies according to the monitor. Set the safety zone size according to the monitor to be used.

- 1 Set the MARKER switch to ON.
- 2 Push the DISP CHG switch several times until the cursor comes to the left of SAFETY on the viewfinder screen. (If you advance too far, push the DISP CHG switch upward to return the position of the arrow.)

Marker setting display

Displaying the Marker in the Viewfinder

- 3 Press the UP/ON or DOWN/OFF button.

If you press the UP/ON button	the safety zone size changes to 90%.
If you press the DOWN/OFF button	it changes to 80%.

- 4 Push the DISP CHG switch several times until the normal viewfinder display appears.

Canceling the center marker

- 1 Set the MARKER switch to ON.
- 2 Push the DISP CHG switch several times until the cursor comes to the left of CENTER on the viewfinder screen.

Marker setting display

- 3 Press the UP/ON or DOWN/OFF button.

If you press the UP/ON button	the center marker appears.
If you press the DOWN/OFF button	it disappears.

- 4 Push the DISP CHG switch several times until the normal viewfinder display appears.

Recording the Date and Time of Shooting

Setting the clock built in the unit, you can record the date and time of shooting.

Setting the Clock

Setting the clock

- Set the CLOCK switch to ON.
The clock display appears on the viewfinder screen.
- Press the SET button.
The year display flashes.
- Set the date and the time using the DISP CHG, UP/ON and DOWN/OFF buttons.
 - Push the DISP CHG switch downward or upward so that the item to be set flashes.
 - Change the figure by pressing the UP/ON button.
(If you advance too far, reset it by pressing the UP/ON and DOWN/OFF buttons simultaneously, and set it again by pressing the UP/ON button.)
 - Repeat ① and ② and, set in order of the year, month, day, hour and minute.
- Select the 12-hour system or 24-hour system.
 - Push the DISP CHG switch. AM/PM (or ■) flashes.
 - Each time you press the UP/ON button, the 12-hour system (AM/PM) and 24-hour system (with ■ indicator) is selected alternately.
- Select the order for displaying the year and date. The display of the year and date changes as follows at each push on the DISP CHG switch.
"YY" means year, "MM" means month, and "DD" means day.
 - Year, month, day (example: 93 05 11)
 - Month, day, year (example: 05 11 93)
 - Day, month, year (example: 11 05 93)

Recording the Date and Time of Shooting

- 6 Press the SET button at a timecast.
The clock starts moving from 00 seconds.
- 7 Set the CLOCK switch to OFF to cancel the clock display.

Recording the Date and Time of Shooting

The date and time of shooting can be recorded over the image.

- 1 Set the CLOCK switch to ON before shooting or during shooting where you want to record the date and time.
The clock display appears on the viewfinder screen and is output from the camera video output.
- 2 Set the CLOCK switch to OFF to stop recording the date and time.

If the clock display does not appear when the CLOCK switch is set to ON

The built-in lithium battery may be exhausted. Consult your Sony dealer.

Recording a Title

Using the character generator built in the unit, you can create a title with letters and numbers in the viewfinder and store it in the memory. You can record them over the image being shot.

A title of up to 8 lines, 96 characters can be memorized.

Making and Memorizing a Title

Operating procedures are as follows:

- 1 Make a title and memorize it.
- 2 Recall the title before shooting.
- 3 Start shooting.

Making and memorizing a title

- 1 Push the DISP CHG switch several times until the above display appears on the viewfinder screen.
(If you advance too far, press the DISP CHG switch upward to return.)

If a title already exists, it is displayed. (If you want to erase the existing title, press the UP/ON and DOWN/OFF buttons simultaneously.)

Recording a Title

- 2** Press the UP/ON button.
A cursor appears on the display, and you can set the title characters.

- 3** Press the DOWN/OFF button to move the cursor to the position where you want a title. (To reverse the cursor, while holding down the DOWN/OFF button, press the UP/ON button.)
12 characters can be input on a line, and there are 8 lines, totaling 96 characters.

- 4** Press the UP/ON button to display the desired character.
(To display the characters in the reverse order, press the DOWN/OFF button while pressing the UP/ON button.)

The display changes in the following order each time you press the UP/ON button.

- 5** Set the selected character by pressing the DOWN/OFF button. The cursor moves to the next character position.

- 6** Repeat procedures 4 and 5 to set all the characters.

The set characters remain in the memory even when the title display or the power is turned off.

- 7** After making the title, push the DISP CHG switch so that the normal viewfinder screen appears.

To replace a character

Make the character you want to replace flash by pressing the DOWN/OFF button in step 3 above, and replace with a new character by pressing the UP/ON button.

Recording a Title

- 1** Push the DISP CHG switch several times until the title appears on the viewfinder screen.
- 2** Press the UP/ON button once.
- 3** Start shooting.
- 4** To stop recording the title, pause the VTR by pressing the VTR button. Then push the DISP CHG switch to cancel the title display.

Note on the CCU-M5/M5P

When "TITLE SET; ON" is set using the function switch of the CCU-M5/M5P, set value is not displayed on the viewfinder screen even if a switch such as GAIN switch is turned on or off. And except when the normal viewfinder screen appears, the title display is not displayed even if "TITLE SET; ON" is set.

Chart of Optional Components and Accessories

The chart below shows the optional components and accessories for the DXC-537A/537AP color video camera. They are introduced on pages 5-4 to 5-10.

Chapter 5 System Upgrading

This chapter introduces the optional components and accessories for system upgrading, and sample systems for different purposes.

●: Applicable
x: Not applicable
① to ⑦: See notes.

①: A conversion cable (6P to 12P) is required.
②: Attachable to the camera handle only.
③: Minijack
④: CCOX cable is required.
⑤: Some functions cannot be controlled.
⑥: Connectable to the camera head.
⑦: Component signals cannot be recorded. (VBS signal only)

Note
When connecting a portable VTR, a cable length of more than 10m (33 ft.) cannot be guaranteed.

- 1) CA-327: Serial No. 10271 and higher
CA-327P: Serial No. 40101 and higher
- 2) Panasonic VTRs
- 3) JVC VTRs

Summary of Optional Components and Accessories

This section introduces you to a summary of the following components and accessories.

- Lenses
- Viewfinders
- Microphones and headsets
- Camera adaptors
- VTRs
- Power sources
- Camera control units
- Camera cables

Lenses

		Lenses	
Item	Lens	Canon	Fujinon

	Power requirements	12 V DC			CA-325A: 100/120 V AC, 50/60 Hz CA-325AP: 220/240 V AC, 50/60 Hz
	Features	This camera adaptor is required when recording with a Betacam portable VTR which requires component outputs (BVW-50/50P/35/35P or BVV-5/5P + VA-5/5P).			Component outputs are not supplied, however, it is equipped with an S Video connector. It is convenient when using a S-VHS VTR as a sub VTR.
					As there is a difference of 0.8 kg in their weight, the CA-325B is more suitable in an application which requires light weight, such as a microscope system.

Note on the RM-M7G

When you use the CCU-M7/M7P/M5/M5P camera control unit to control the DXC-537A/537AP, you cannot connect the RM-M7G remote control unit directly to the camera head. Connect the remote control unit to the camera control unit. However, you can connect the RM-M7G to the camera head if the camera control unit is not used.

Summary of Optional Components and Accessories

Camera Cables

Camera cables

Model No.	Pin	Color	Functions/Features
CCZ-A (CCZ-A2/5/ 10/25/50/100)	26-pin	Gray	Used when connecting the CA-537/537P (26-pin) to the BVW-50/50P, BVV-5/5PS + VA-5/5P, CCU-M7/M7P or CCU-M5/M5P (26-pin).
CCZQ-A2AM	26-pin	Gray	Used with CCZ-A and CCZ-1E/1B when connecting the CA-537/537P (26-pin) to the CCU-M5/M5P (14-pin).
CCZQ-A (CCZQ-A2/5/ 10)	26-pin	Blue	Used when connecting the CA-537/537P (26-pin) to the VO-8800/8800P/BVU-150/150P, EVV-9000/9000P + VA-90/90P, S-VHS VTR (AG-7400, etc.) or CMA-8A/8ACE (14-pin).
CCZJ-A (CCZJ-2/5)	26-pin	Dark gray	Used when connecting the CA-537/537P (26-pin) to the VHS VTR (AG-6400, etc.) (J-type, 10-pin).
CCQX-3	XLR-type 4-pin	Dark gray	Used when connecting the camera (XLR-type, 4-pin) to the CMA-8A/8ACE or AC-500/500P AC adaptor (14-pin).
CCA-7 (CCA-7-5/ 25/50/100)	10-pin	Black	Used when connecting the RM-M7G remote control unit to the DXC-537A/537AP.
CCQ-AM (CCQ-10/25/ 50/100AM)	14-pin	Gray	Used when connecting the CA-327/327P (14-pin) to the CCU-M5/M5P (14-pin).
CCQ-BRS (CCQ-25/10/ 25/50BRS)	14-pin	Blue	Used when connecting the CA-327/327P (14-pin) to the VO-8800/8800P, BVU-150/150P or EVV-9000/9000P + VA-90/90A (14-pin).
CCQJ-2	14-pin	Gray	Used when connecting the CA-327/327P (14-pin) to the VHS VTR (AG-6400, etc.) (J-type, 10-pin).
CCDQ-06	DIN 4-pin	Black	Used when connecting the CCU-M5/M5P (DIN 4-pin) to the CMA-8A/8ACE (14-pin).

Sample Video System Configurations

This section introduces 5 sample systems.

Multi Camera System

This system uses two cameras, each of which shoots from different angles. Their images are switched and recorded while special effects are added. Further, if you add a remote control unit, you can make various adjustments to the camera, such as color adjustment, at hand.

Adjusting the picture tone of the cameras

When two or more cameras are used in a system the subcarrier* (SC) phase and the horizontal (H) phase of each camera should be adjusted to avoid picture tone shift or horizontal sync deviation by switching cameras.

Use one of the cameras as a reference, and adjust each camera so that its subcarrier phase and the horizontal phase are the same as those of the reference camera.

- 1 Adjust the subcarrier phase roughly by using the SC PHASE selector.
- 2 Adjust the subcarrier phase precisely by using the SC PHASE control while checking the phase on a vector scope.
- 3 Adjust the horizontal phase by using the H PHASE control while checking the phase on a video monitor. For precise adjustment, use a waveform monitor or oscilloscope.

Sample Video System Configurations

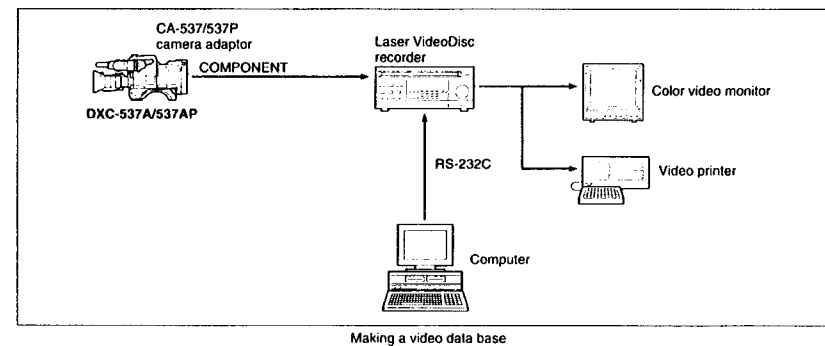

Computer Graphics System

This is a system for creating computer graphics from the images shot with the video camera.

Laser Video Disc Recording System

The images shot with the video camera and still pictures can be recorded and stored on a video disc. By using a computer, much of valuable video information can be made into a data base on a video disc.

Microscope Recording System

This is a system for shooting an image captured by a microscope. A microscope adaptor is required.

Microscope recording system

Still Image Transmitting System

Using a still image transceiver, the images shot with the camera can be digitally processed, stored in the memory and transmitted through a telephone line. An on-site video report using this system is useful for appropriately determining the conditions in an emergency.

Basic system for still picture transmission

Chapter 6 Maintenance

This chapter provides troubleshooting and maintenance information concerning the camera.

Warning System	6-2
Troubleshooting	6-4
Maintenance	6-5
Cleaning	6-5
Condensation	6-7

Warning System

When a problem occurs when the power is on or during operation, warnings are given:

- by the REC/TALLY and BATT indicators in the viewfinder
- by a message on the viewfinder screen
- by the Tally lamp
- by the WARNING lamp in the display window and the alarm sound on the VTR (only with the EVV-9000/9000P, PVV-1/1P and BVV-5/5PS)

The following table shows the warnings and how to deal with them.

Warnings and how to deal

Camera			VTR			Problem	VTR action	What to do
REC/TALLY indicator and tally lamp	BATT indicator	Viewfinder display	WARN-ING lamp	Display window	Alarm sound ● ● ● ● 4 beeps/sec. ● 1 beep/sec. ● 1 beep/sec. ● continuous beep			
	—	—		RF lights. ^{a)}	● ● ● ● ●	Video head gaps are clogged ¹⁾ , or there is a problem in the recording circuit.	Beeps after detecting head clogging.	Clean the heads. (see page 6-6) If the recording quality is still poor, turn the power off and consult your Sony dealer.
	—	—		SERVO lights.	● ● ● ● ●	Servo lock is lost.	Recording continues, but the quality is poor.	Turn the power off and consult your Sony dealer. (The SERVO indicator may flash momentarily when recording starts. This is not a problem.)
	—	—		HUMID lights.	● ● ● ● ●	Condensation exists on the head drum.	Recording continues, but stops if the tape sticks to the head drum. Playback, fast-forward or rewind stops.	Stop the tape. Turn off the power, turn it on again and wait until the HUMID indicator goes off.
	—	—		SLACK lights.	● ● ● ● ●	The tape cannot be wound properly.	VTR stops. (Refer to the service manual or maintenance manual of the VTR.)	Eject the cassette. Close the cassette holder, and turn the power off after the top panel of the cassette holder has lowered completely. Then consult your Sony dealer.)
	—	—		TAPE END flashes. ^{a)}	● ● ● ● ●	The tape is wound close to the end.	Operation continues.	Change the cassette, if necessary.
	—	—		TAPE END flashes.	● ● ● ● ●	The tape has reached its end.	Recording, playback or fast-forward stops.	Change the cassette.
		BATT 10.7 V		BATTERY flashes.	● ● ● ● ●	Battery is almost exhausted.	Operation continues.	Change the battery, if necessary.
		BATT 10.7 V		BATTERY E flashes.	● ● ● ● ●	Battery is exhausted.	Operation stops.	Change the battery.

continuous light

1 flash/sec.

4 flashes/sec.

a) During recording only

b) During playback, fast-forward and rewind

For the warning messages displayed in the viewfinder, see "Viewfinder Display" on page 1-14.

If an abnormality occurs with a portable VTR

When a portable VTR is used, warnings are given by the tally lamp, and the REC/TALLY and BATT indicators inside the viewfinder. (Error messages do not appear on the viewfinder screen.)

1) Clogging of video head gaps

If the VTR remains in a recording standby or pause mode for a long duration of time, the video heads abrade the same portion of the tape repeatedly. As a

result, the magnetic powder of the tape adheres to the video heads and the recording quality becomes poor.

Troubleshooting

If you think you have a problem during operation, check through the following list. Should any difficulty persist, consult your Sony dealer or local authorized Sony service facility.

Symptom	Cause	Reference page
The power cannot be turned on.	• The battery is not installed.	2-28
	• The POWER switch on the camera or VTR is set to OFF. (Camcorder system)	2-31
	• The connection between the camera and VTR is not good, or the power connection is not good. (Camcorder system)	2-8, 2-27
	• The VTR cannot supply the power to the camera. (Portable VTR not made by Sony make)	2-25
The battery is quickly discharged.	• The battery capacity is lowered (memory effect) because you charged it before using it up completely.	2-30
	• The battery pack has not been fully charged.	2-29
	• Incorrect care of the battery.	2-29
	• You have repeatedly started/stopped recording or frequently used motorized zooming, rewind, fast-forward and other operations which consumed much battery power.	--
The image on the whole screen is bluish or reddish.	• The white balance is not adjusted.	3-9
	• The FILTER selector or WHITE BAL selector setting is different from what it was when the white balance was adjusted.	3-10
	• The ATW switch is set to ON. (Since the ATW function is provided for emergency use, it is not perfect.)	3-9
	• The AUTO W/B BAL switch inadvertently flipped to WHT during recording.	3-7
	• The lighting conditions or light source are different from what they were when the white balance was adjusted. (Readjust the white balance.)	3-9
Black in the image is bluish or reddish.	• The black balance is shifted due to the change of ambient conditions.	3-8
Recording does not start or stop.	• The power is not supplied.	2-27
	• The setting of the VTR switch on the camera adaptor is incorrect.	2-26
Audio cannot be recorded.	• The setting of the VTR switch on the camera adaptor is incorrect.	2-26
The image in the viewfinder is blurred.	• The image is out of focus.	3-5
	• The flange focal length of the lens is not correct.	2-37
	• The lens is dirty.	6-5
	• The distance from the camera to the object is too short (Use close-ups.)	3-17

Maintenance

Cleaning

Cleaning and care of the lens

- Perform lens maintenance and inspection once a year. If necessary, have the lens overhauled.
- Use a blower or soft brush to clean off dust on the surface of the lens. Do not rub on the lens when it is dusty.

Blowing off the dust on the lens

- If the lens is soiled with grease or fingerprints, moisten a clean cotton cloth or lens cleaning paper with a commercially available lens cleaning liquid, and wipe off the dirt with a circular movement of the cloth or paper moving from the center to the edge of the lens.

Wiping off the dirt with lens cleaning paper

- If you use the camera in rain, snow or any other place where it may get wet, cover it carefully. After using the camera in such a place, wipe off the moisture with dry cloth, and seal it in a plastic bag together with a desiccant until it dries completely.

Sealing in a plastic bag with a desiccant

Maintenance

- Avoid attaching and removing the lens in a dusty place.
- When the lens is removed, attach the lens mount cap to keep dust away from the inside of the lens mount.

Attaching the lens mount cap

Cleaning the viewfinder

Use a commercially available blower to remove dust from the CRT screen and mirror inside the viewfinder barrel.

Cleaning the camera head

Clean the cabinet, panel and controls with a soft, dry cloth. If the dirt is extremely heavy, use a cloth moistened with a mild detergent solution, then wipe it off with a dry cloth.
Do not use any type of solvent, such as alcohol or benzine which might damage the finish.

Cleaning the video heads

When playback pictures are noisy and hardly visible, the video heads may be dirty and must be cleaned. Clean the video heads by using a cleaning cassette.
For details, see the instructions manual of the VTR.

Replacing the video heads

If the picture is still noisy after cleaning, replace the video heads. The life of the heads is about 500 to 1000 hours of use. To replace the heads, consult your Sony dealer.

Condensation

If you move the unit from a very cold place to a warm place, or use it in a very humid location, condensation may form on the head drum, tape and lens. If the unit is operated in this state, the tape may adhere to the drum, and cause a failure or even permanent damage. To avoid this, take the following precautions:

- When moving the unit from a cold place to a warm place, do not insert a cassette. If already inserted, eject the cassette.
- If moisture has condensed in the unit while a cassette is inserted, remove the cassette by pressing the EJECT button. Then turn off the power and wait until the condensation disappears completely.

Appendix

Specifications	A-2
Glossary	A-6

Specifications

Camera Head DXC-537A/537AP

The DXC-537A uses the NTSC system and the DXC-537AP uses the PAL system.

Image device	2/3" Interline-transfer CCD, 3-chip
Picture elements	768 × 493 (h/v) (NTSC) 786 × 581 (h/v) (PAL)
Sensing area	8.8 mm × 6.6 mm (equivalent to a 2/3-inch pickup tube)
Built-in filters	1: 3200 K 2: 5600 + 1/4 ND 3: 5600 K 4: 5600 K + 1/16 ND
Lens mount	Sony 2/3" Bayonet mount
Signal system	EIA standards, NTSC color system (DXC-537A) CCIR standards, PAL color system (DXC-537AP)
Scanning system	525 lines, 2:1 interlace, 30 frames/sec. (NTSC) 625 lines, 2:1 interlace, 25 frames/sec. (PAL)
Scanning frequency	Horizontal: 15.734 kHz (NTSC) 15.625 kHz (PAL) Vertical: 59.94 Hz (NTSC) 50.00 Hz (PAL)
Sync system	Internal External with the BS or VBS signal supplied to the GEN LOCK IN connector (when the CA-537/537P, CA-325A/325AP or CA-325B is used) or the reference signal input to the VTR/CCU/CMA connector from the GEN LOCK IN connector of the CCU-M5/M5P/M7/M7P (when the CA-537/537P is used)
Horizontal resolution	750 TV lines (center)
Minimum illumination	13 lx with F1.8, +18 dB 7.5 lx with F1.4, +18 dB 1.9 lx with F1.4, +30 dB
Sensitivity	2000 lx with F8.0 (Typical) at 3200 K, 89.9% reflectance
Gain selection	-3, 0, 3, 6, 9, 12, 18 or 24 dB, selectable
Video output	Composite signal: 1.0 Vp-p, sync negative, 75 ohms unbalanced R/G/B signal: 1.4 Vp-p Y/C separate signal: Y: 1.0 Vp-p, sync negative, unbalanced C: burst level without sync 0.286 Vp-p (NTSC) or 0.3 Vp-p (PAL)
Signal to noise ratio	62 dB (NTSC, Typical) 60 dB (PAL, Typical)
Registration	0.05% for all zones, without lens
Inputs/Outputs	Interface: 50-pin DIN VIDEO OUT: BNC-type, 75 ohms, unbalanced LENS: 2/3-inch lens connector (12-pin) VF: 8-pin DIN REMOTE: 10-pin MIC: XLR-type (3-pin)
Power requirements	12 V DC (10.5 to 17 V DC)
Power consumption	10.5 W

Operating temperature	-10°C to +45°C (14°F to 113°F)
Storage temperature	-20°C to +60°C (-4°F to 140°F)
Mass	2.3 kg (5 lb 1 oz)
Dimensions	See the illustrations below.

Dimensions

Specifications

Zoom Lens VCL-916BYA

Focal length	9.0 mm to 144 mm
Zoom	Manual and motorized, selectable Zooming ratio: 16x
Maximum aperture ratio	1:1.8
Iris control	Manual and auto, selectable F1.8 to F16 and C (closed)
Range of object field (at the distance of 0.9 m)	
W (wide angle):	815 × 611 mm (32 1/8 × 24 1/8 inches)
T (telephoto):	51 × 38 mm (2 1/8 × 1 1/2 inches)
Minimum object distance	0.9 m (35 1/2 inches)
Filter thread	77 mm dia., 0.75 mm pitch (Lens) 86 mm dia. 1 mm pitch (Hood)
Mount	Bayonet* mount, 2/3 inch
Mass	About 1.2 kg (2 lb 10 oz) without hood
Dimensions	About 120 × 197 mm (dia./length) with hood (when focus is ∞) (4 3/4 × 7 7/8 inches)

Viewfinder DXF-501/501CE

Picture tube	1.5-inch monochrome
Indicators	REC/TALLY indicator BATT indicator SHUTTER indicator GAIN UP indicator
Resolution	600 TV lines
Power requirements	12 V DC
Power consumption	2.3 W
Mass	About 500 g (1 lb 2 oz)
Dimensions	About 182 × 68 × 205 mm (w/h/d) (7 1/4 × 2 3/4 × 8 1/3 inches)

Carrying Case LC-421

Mass	About 7.7 kg (15 lb 7 oz)
Dimensions	About 790 × 440 × 340 mm (w/h/d) (31 1/8 × 17 3/8 × 13 1/2 inches)

Glossary

Microphone ECM-670

Type	Electret condenser microphone
Directivity	Super cardioid
Frequency response	70 – 16,000 Hz
Sensitivity	-44 ± 3 dB (0 dB = 1 V/Pa at 1000 Hz)
Maximum input sound pressure level	125 dB SPL (at 1000 Hz, 1% T.H.D. typical)
Signal-to-noise ratio	More than 70 dB
External power supply	11 V to 52 V DC
Dimensions	Approx. 21 dia. \times 225.5 mm (27/32 dia. \times 9 inches) not incl. wind screen
Mass	Approx. 165 g (5.8 oz)

Frequency response

Accessories Supplied

Wind screen (supplied with DXC-537AK/AL/APK/APL only) (1)
 Lens mount cap (1)
 Chart for flange focal length adjustment (1)
 Operating Instructions (1)

Design and specifications are subject to change without notice.

Aliasing (Page 1-20)

Distortion of the signal caused by the overlap of the base band signal and the lower sideband signal when the signal is demodulated.

ATW function (Page 3-13)

Abbreviation of Automatic Tracing White balance function. A function which controls the white balance to the optimum value tracing the variations in the current lighting conditions.

Bayonet type (Page A-4)

A type of lens mount. The lens is inserted into the lens mount and fixed in place by rotating a ring.

Black balance (Page 3-7)

To balance the black level of the R, G and B signals so that black has no color.

Black set (Page 3-7)

A reference level for black balance adjustment. To set the reference black level of the R, G and B channels so that the black looks black even if the gain of the video amplifier is increased.

CCD (Page 1-2)

Abbreviation of charge-coupled device. A semiconductor which is used in place of a camera tube. It converts light into an electrical charge and outputs the electrical charge in the form of voltage variations.

Center marker (Page 4-17)

A cross that indicates the center of the image on the viewfinder screen.

Color bar signals (Page 2-35)

Test signals displayed on the screen as vertical stripes of different colors. Used for the adjustment of hue and saturation by a video camera and video monitor.

Color matrix (Page 1-6)

The actual color of the subject and the color in a person's memory are not always the same. Therefore, if the color of a person's skin, for example, is reproduced faithfully, it becomes yellowish and looks unhealthy. The color matrix function compensates such color differences.

Color temperature (Page 3-4)

The color quality of lights, expressed in Kelvins (K). Color temperature is lower when the color is reddish and higher when bluish.

Condensation (Page 6-7)

Moisture which condenses on tape transport mechanisms. The tape tends to adhere to and be damaged by condensation on the head drum.

CRT (Page 1-7)

Abbreviation of cathode-ray tube. A tube type display. A CRT is used in a camera viewfinder so you can monitor what you are shooting.

Depth of field (Page 3-3)

The range in front and in the rear of the subject that seems to be in focus. The depth of field is great when the range is big, and narrow, when the range is small.

Diopter (Page 2-33)

A unit to indicate the degree of convergence or divergence of a bundle of rays. Also means a device used on the ocular lens of video cameras or telescope to correct the vision of the operator.

Ff

See Flange focal length.

Flange focal length (Page 2-37)

Distance from the plane of the lens mounting flange to the image focal plane.

Flare

Light unnecessary for the focus of an image may stray into the image plane and interfere with the image. Flare is a loss of contrast in the image resulting from this phenomenon.

Flicker (Page 4-12)

Repeated change of brightness on the screen, which is caused by the frequency difference between the camera's scanning and the variations in the lighting.

Gain (Page 1-6)

Amplified amount of video signal. Measured in "dB" units.

Gamma curve (Page 1-3)

The video camera compensates for the non-linearity of the luminous characteristics of the video monitor. This is called gamma compensation. This characteristic curve is called the gamma curve.

Gen-lock (Page 5-9)

Abbreviation of Generator Lock. Synchronizes every piece of video equipment to a reference (master) sync.

HAD (Page 1-2)

Abbreviation of Hole-Accumulated Diode. A CCD sensor structure designed to suppress certain types of noise inherent in CCDs.

Horizontal resolution (Page 1-2)

Resolution of the screen in the horizontal direction. It is expressed as the number of vertical lines which can be distinguished when shooting a test chart.

Hunting (Page 3-3)

Repeated brightening and darkening of an image resulting from repeated responses to automatic iris control.

IRE scale (Page 2-37)

A video level measurement scale standardized by the Institute of Radio Engineers, now called the Institute of Electrical and Electronic Engineers (IEEE).

Iris (Page 1-5)

A diaphragm which controls the amount of light passing through the lens.

Knee point (Page 1-6)

Normally the video signal is cut off at a brightness level of 110% (% is a unit to indicate the brightness level). If the signal level is compressed, however, higher level signals can be reproduced. The knee point is the level with which signal compression starts.

Luminance signal

A signal that determines the brightness of the picture. Also called the Y signal.

ND filter (Page 3-3)

Abbreviation of Neutral Density filter. ND filters reduce the amount of incident light equally across the entire visible wavelength range without affecting color.

Pedestal level (Page 1-17)

A black level which is the absolute black level of a video signal. Normally, a video signal refers to the setup level (about 0% to 10% of video amplitude above the blanking level) as the black level.

Picture elements (Page 1-2)

Dots that compose an image. The more picture elements, the higher the resolution of the picture.

Return video (Page 3-6)

The picture from a VTR during recording, the playback picture during playback, or the signal from a control console such as a video switcher.

Shutter speed (Page 4-12)

The length of time a shutter remains open. The higher the shutter speed, the more clearly a moving object can be shot.

Subcarrier (Page 5-11)

Color information contained in a composite video signal. Its amplitude is for color saturation and its phase relative to the color burst signal is for hue.

S-video output connector (Page 2-25)

A connector for outputting Y (luminance) and C (chrominance) signals separately. Transferring a video signal in this separated form reduces interference between Y and C signals and helps reproduce noiseless images.

Sync signal

A reference signal consisting of vertical and horizontal sync signals used for synchronizing the scanning patterns of the video camera and the monitor.

Glossary

VBS (Page 5-12)

Abbreviation of Video, Burst and Sync signal. It means the same as composite video signal.

Vertical smear (Page 1-3)

A bright vertical line which appears on the screen when shooting a very bright object with a CCD video camera. Also called smear.

Viewfinder (Page 2-33)

A video monitor attached directly to a video camera.

White balance (Page 1-5)

Adjustment of R, G and B signal levels, so that white objects are reproduced correctly as true white.

Zebra pattern (Page 4-4)

Striped patterns which appear in the viewfinder to indicate areas of the picture where the video level is about 70% to 80% IRE (for NTSC) or 490 mV to 560 mV (for PAL.) They are used to confirm the image level of the subject.

Zoom (Page 3-5)

To change the focal length of the lens gradually from wide-angle to telephoto (zoom in), and from telephoto to wide-angle (zoom out) without actually changing the lens.

SECTION 2

SERVICE INFORMATION

2-1. BOARD LAYOUT

2-2. REMOVAL OF CABINET

Loosen the four screws respectively to remove the side plates.

Note: Before installing the right side plate, set both of switches S6 and S7 on the AT-78 board to bottom position and put two knobs for A. IRIS MODE and ATW switches down.

2-3. REPLACEMENT OF MAIN PARTS

Note: To replace the CCD, the whole CCD unit should be replaced.

1. Remove the lens and viewfinder referring to the instruction manual.

Note: Attach a mount cap to the lens mount to protect the prism block.

2. Remove the left side plate referring to Section 2-2 "REMOVAL OF CABINET".
3. Disconnect the seven connectors, CN4 to CN9 and CN21. Release harnesses from harness clamps shown in the figure.

4. Remove the four screws and pull out the CCD unit.

5. Install a new CCD unit by reversing procedures for removal.

2-4. CONNECTORS AND CABLES

2-4-1. Connector Input/Output Signals

The main connector input/output signals are as follows:

VIDEO OUT (BNC); 1.0 Vp-p \pm 0.1 V, sync negative 75 Ω

CAMERA/CA (50P)

(EXTERNAL VIEW)

Pin No.	Signal	Specification
A1	MODE ID	OPEN : COMP, GND : R/G/B

Pin No.	Signal	Specification
1	MIC (G) IN	GND for MIC
2	MIC (X) IN	-60 dB BALANCED (0 dB = 0.775 V)
3	MIC (Y) IN	

2-4-2. Connection Connector

Connections made with the connector panels during installation or service, should be made with the connectors or complete cable assemblies specified in the following list, or equivalent parts.

Connector Name	Parts No. and name of connector with cable
REMOTE (10P, FEMALE)	1-506-522-11 CONNECTOR, ROUND 10P, MALE HIROSE HR10A-10P-10P equality or CCA-7-20 Cable assembly (optional)
VIDEO OUT (BNC)	1-560-069-11 PLUG, BNC or B-B cable assembly (Cable length 1.5 m, optional)
VF (8P, FEMALE)	9-994-797-01 CABLE, VF
LENS (12P, FEMALE)	1-564-360-11 CONNECTOR, 12P, MALE HIROSE HR10-10PA-12P equality
MIC (3P, FEMALE)	1-508-084-31 CONNECTOR, 3P, MALE CANNON XLA-3-12C equality or EC-0, 3C2 cable assembly (supplied)

2-5. FUNCTION OF SWITCHES ON PC BOARD

IE-40 board

- S1 (DTL ON/OFF)

When set to "ON", the detail circuit activates and a contour of image is enhanced.
The switch is factory-set to "ON" position.
Set according to use.

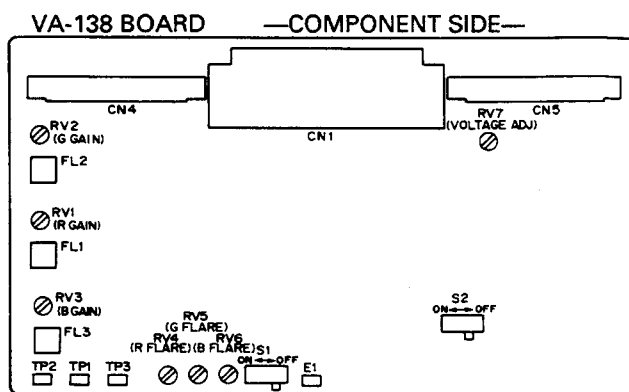

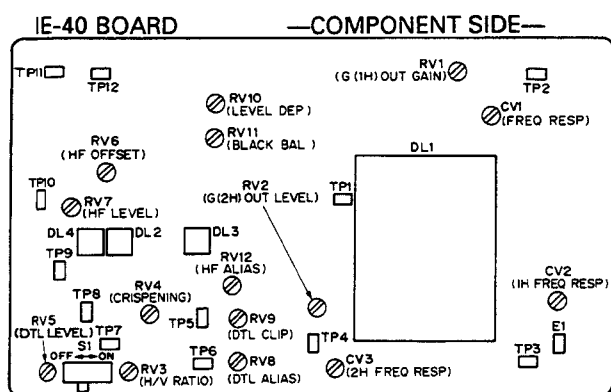

VA-138 board

- S1 (FLARE ON/OFF)

When set to "OFF", the flare compensation circuit does not activate.
The switch is factory-set to "ON".

- S2

This switch is not used and set it to "OFF" at all times.

AT-78 board

- S11 (ADJ ON/OFF)

When set to "ON", the unit is put into ADJ mode, and various adjustments can be performed.

This switch is factory-set to "OFF".

[Procedures]

1. When S11 is set to "ON", characters displayed on the VF screen are all erased and the screen ① will be displayed. (In clock setting, the screen ① will be displayed after setting is complete.)
2. 1) While the screen ① is displayed, by pressing the UP/ON button on the front of camera, data in a memory "EEPROM" is preset as shown in the table and then the screen ② is displayed. Next the screen ③ is displayed and the unit enters the ADJ mode.

ITEMS	PRESET VALUES
R/G/B DARK	Adjusted value is preset
AUTO WHT A/B	Adjusted value is preset
A.IRIS/DTL/M.PED	Setting value is preset
SHUTTER SPEED	1/100 (NTSC), 1/60 (PAL)
CLEAR SCAN	60.4 Hz (NTSC), 50.3 Hz (PAL)
GAIN SW setting	0/9/18 dB
L.L IND/TONE SET	OFF
SAFETY ZONE	90%
CENTER MARKER	ON
CLOCK	12-hour system
Order for displaying year and date	Year, Month, Day

- 2) While the screen ① is displayed, press down the DISP CHG switch. The screen ③ will be displayed and the unit enters the ADJ mode. (The electronic shutter does not function regardless of SHUTTER switch (S5/AT-78 board) setting.)
3. 1) While the screen ③ is displayed, by pressing the UP/ON or DOWN/OFF button, data value will be varied from 00h to FFh.
- 2) While the screen ③ is displayed, by pressing both the UP/ON and DOWN/OFF buttons simultaneously, data value will show "80h".

4. By using the DISP/CHG switch, adjustment items is changed from 01h to 15h.

[Adjustment items]

01 G DARK	08 R SHAD BAL	0F B V SAW
02 G BLACK1	09 B SHAD BAL	10 G VA GAIN
03 R DARK	0A G H SAW	11 R VA GAIN
04 R BLACK1	0B R H SAW	12 B VA GAIN
05 B DARK	0C B H SAW	13 M PRE KNEE
06 B BLACK1	0D G V SAW	14 R PRE KNEE
07 G SHAD BAL	0E R V SAW	15 B PRE KNEE

VF screen

Adjustment items Data value

- **S14 (FD/FM)**

A CCD read mode is selected, field (FD) or frame (FM) integration mode. The switch is factory-set to "FD" position.

Note:

When the EVS switch (S9/AT-78 board) is set to ON, the electronic shutter does not function. However, with the switch S14 set to "FM", electronic shutter can be used under improved vertical resolution. In this condition, CCD sensitivity decreases by half compared to the field integration mode.

When electronic shutter is OFF, a sensitivity does not change and the vertical resolution is increased. On the other hands, more after-images appear because of an accumulation time of 1/30 seconds.

- S16 (90%/STD)
- S17 (80%/STD)

When the MARKER switch (S12/AT-78 board) on the camera side panel is set to "ON", a frame showing 90% (or 80%) of picture being shot (safety zone, factory-setting 90%) and a white cross showing the center marker of screen (center marker) can be displayed on the VF screen.

Combination of the above indications can be changed as shown in the table by using the switches S16 and S17. These are factory-set to "STD" position respectively.

SWITCH SETTING	POSITION OF CURSOR ON VF	SETTING WITH DISP CHG SWITCH
S16: STD	SAFETY	Selection of 90%/80%
S17: STD	CENTER	CENTER MARKER ON/OFF
S16: STD	SAFETY	80% ON/OFF
S17: 80%	CENTER	CENTER MARKER ON/OFF
S16: 90%	SAFETY	Not displayed
S17: STD	CENTER	CENTER MARKER ON/OFF
S16: 90%	SAFETY	90% ON/OFF
S17: 80%	CENTER	CENTER MARKER ON/OFF

For other switches on AT-78 board, refer to the instruction manual.

PR-180 board

- S1 (R GAMMA ON/OFF)
- S2 (G GAMMA ON/OFF)
- S3 (B GAMMA ON/OFF)

When set to "ON", the gamma correction is performed for the R, G and B video signals so that the overall characteristic of signals from camera to monitor is " $\gamma=1$ ". Normally set to "ON".

- **S4 (MATRIX ON/OFF)**

When set to "ON", the linear matrix circuit activates to obtain high saturated color reproducibility. The switch is factory-set to "ON".

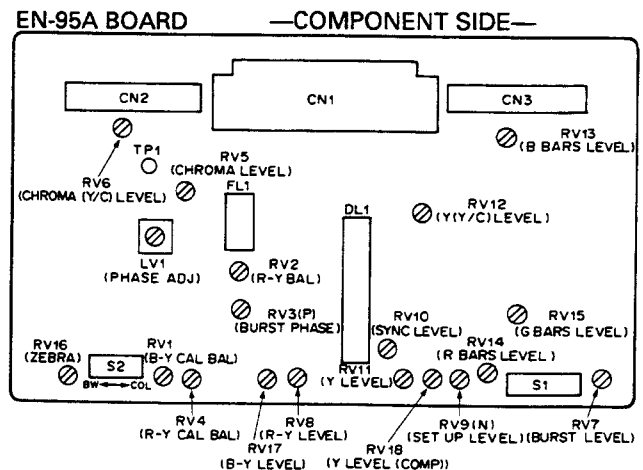

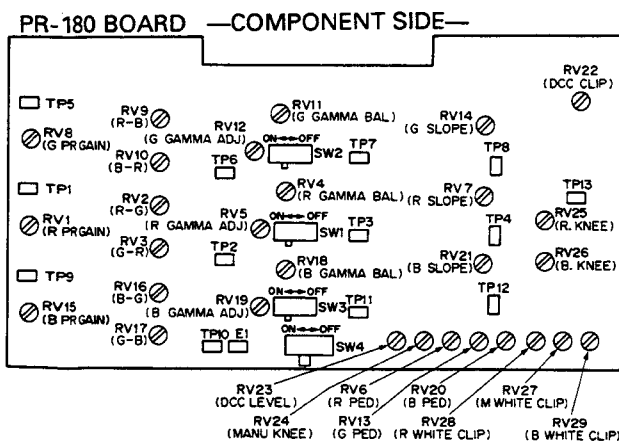

EN-95A board

- S1 (BLKG SEL 19H/20H/21H) . . . DXC-537A (NTSC)
only

**This switch selects V blanking width.
The switch is factory-set to "20H".**

- **S2 (B/W /COL)**

When set to "COL" (color) position, a signal to be sent to a viewfinder is changed from monochrome to color.
When a monochrome viewfinder such as the DXF-501/501CE is used, set to "B/W" position.

2-6. SYSTEM CONFIGURATION

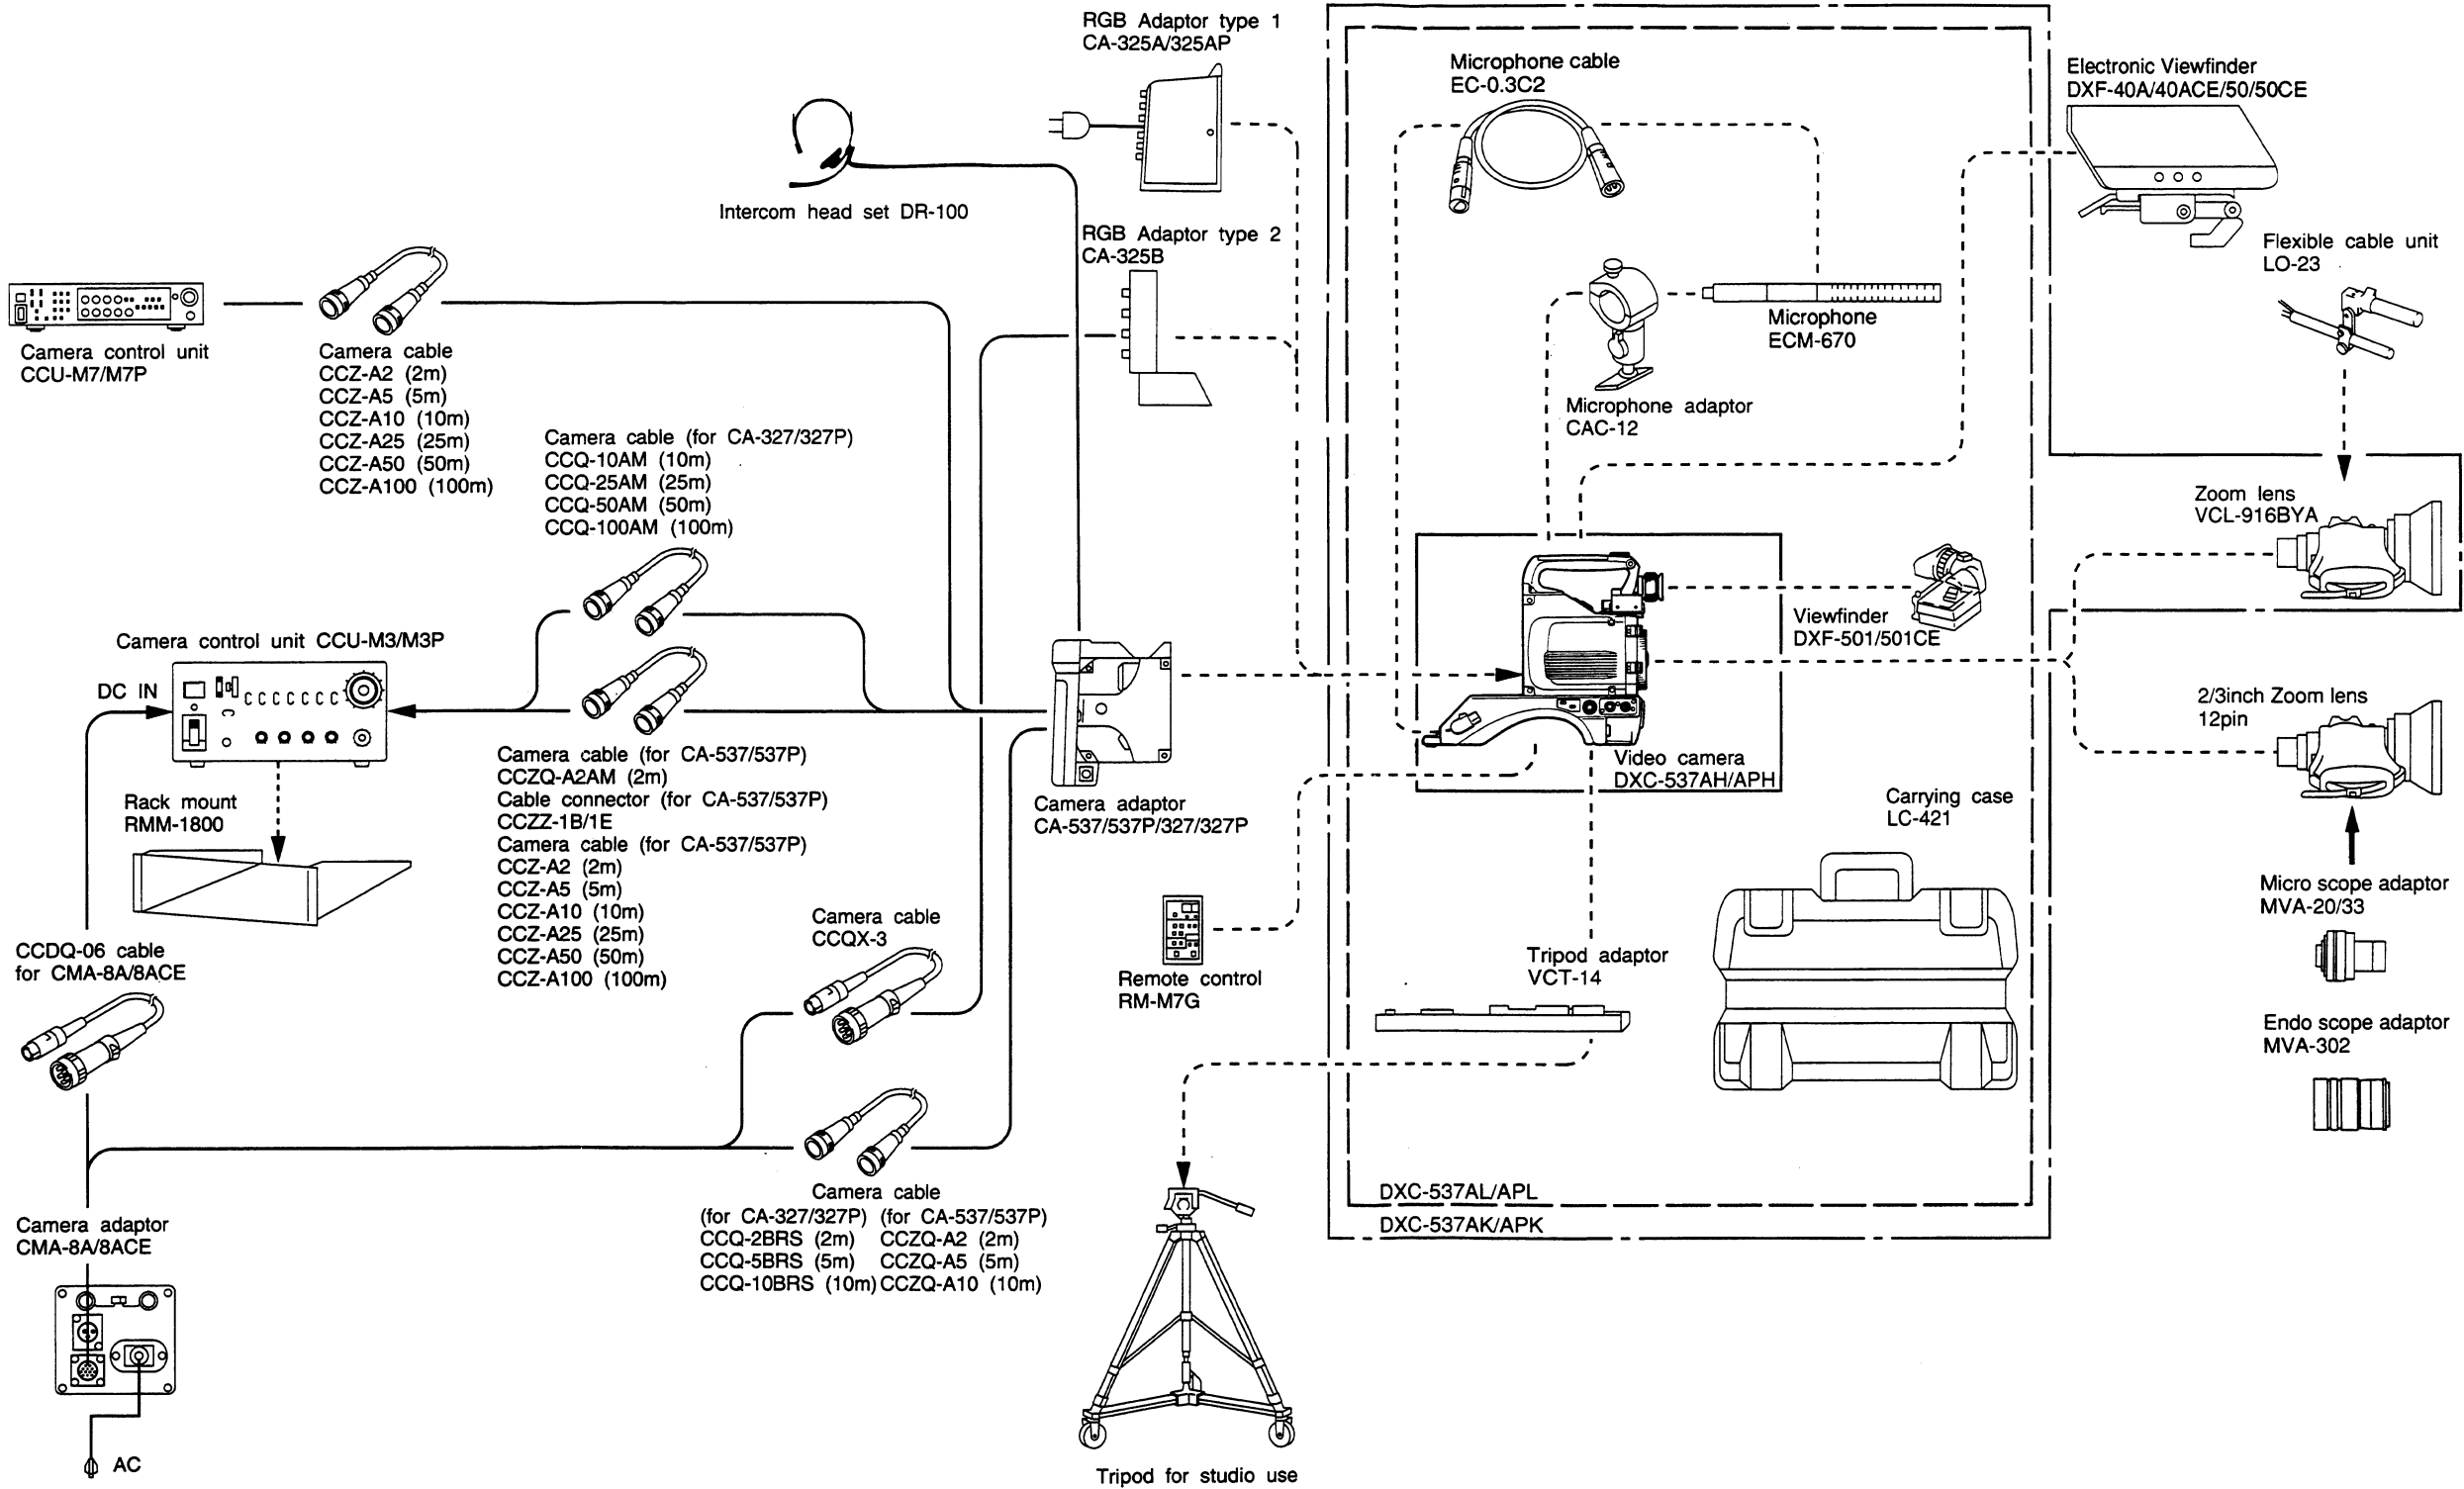

Components of the DXC-537A/537AP series video camera kits and the configuration of the camera and its peripheral equipments (optional) are shown in the following charts.

Step 17	1H Gain Level	Records the right half of the white window chart.	CH1 : TP12/IE-40 CH2 : TP2/IE-40	⦿ CV2/IE-40	The phase of CH1 is aligned to CH2.	Observe the trailing edge of the white level.
Step 18	G GAIN Level		CH1 : TP8/PR-180	⦿ RV8/PR-180	1400 ± 10 mV	
Step 19	R/B Pre Set White	GAIN Switch → 0dB Object : Gray Scale Chart Lens Iris F ≅ 8.0	CH1 : TP6/PR-180 CH2 : TP2/PR-180	⦿ RV1/PR-180	The waveform becomes flat.	Make the gain of CH1 and CH2 equal. Put the CH1 into the GAIN ADD mode and the CH2 into the INVERT mode.
			CH1 : TP6/PR-180 CH2 : TP10/PR-180	⦿ RV15/PR-180	The waveform becomes flat.	
Step 20	G Gamma Balance		TP8/PR-180	⦿ RV11/PR-180	White Level : 1.4 V	
Step 21	G Gamma Set		TP8/PR-180	⦿ RV12/PR-180	Crosspoint : 880 mV	
Step 22	R Gamma Balance		TP4/PR-180	⦿ RV4/PR-180	White Level : 1.4 V	
Step 23	B Gamma Balance		TP12/PR-180	⦿ RV18/PR-180		
Step 24	R/B Gamma Set		Vector Scope	⦿ RV5/PR-180 ⦿ RV19/PR-180	White beam spot → Center	Be sure to use a vector scope compatible with setup level "0".
Step 25	Pedestal	Lens Iris → Close GAIN Switch → 0dB	TP8/PR-180	⦿ RV13/PR-180	Level : 38 ± 5 mV (NTSC) : 45 ± 5 mV (PAL)	
			Vector Scope	⦿ RV7/PR-180 ⦿ RV22/PR-180		Be sure to use a vector scope compatible with setup level "0".
Step 26	Knee	GAIN Switch → 0dB Object : Gray Scale Chart	Waveform Monitor	⦿ RV24/PR-180	Level : 104 IRE (NTSC) : 728 mV (PAL)	Lens Iris F ≅ 8.0
				⦿ RV25/PR-180 ⦿ RV26/PR-180	Carrier leakage is minimized.	
				⦿ RV7/PR-180 ⦿ RV21/PR-180		
Step 27	G White Clip	Lens Iris → Open	Waveform Monitor	⦿ RV27/PR-180	Clip : 115 IRE (NTSC) : 805 mV (PAL)	
Step 28	R/B White Clip	Object : Gray Scale Chart		⦿ RV28/PR-180 ⦿ RV31/PR-180	Carrier of white portion is minimized	

EN-95A BOARD —COMPONENT S

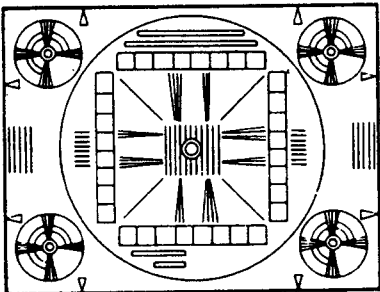

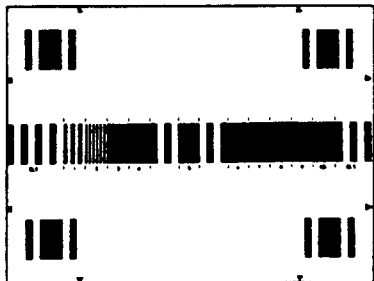

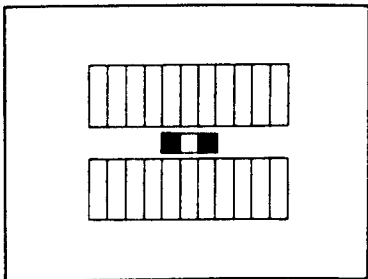

SECTION 3

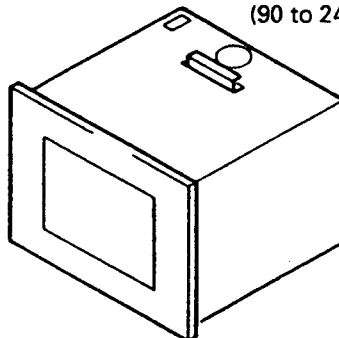

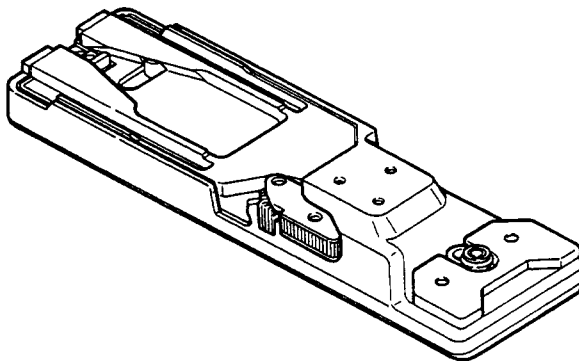

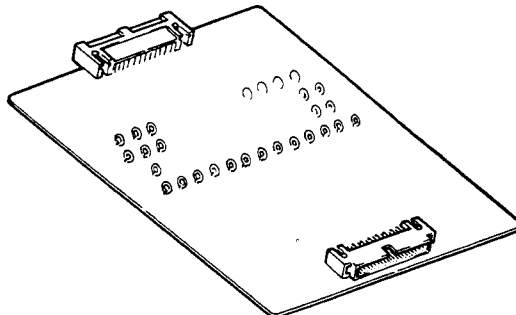

ALIGNMENT

3-1. PREPARATION

3-1-1. Equipment Required

- Oscilloscope (more than 100 MHz)
- Waveform monitor
- Vectorscope
- Black and white monitor (Sony PVM-91CE/122CE or equivalent)
- Color Monitor (Sony PVM-1320 or equivalent)
- AC Adaptor (Sony CMA-8CE/8ACE)
- Frequency counter
- Camera adaptor (CA-537P)

J-6026-100-A	Resolution chart
	
J-6026-110-A	Multiburst chart
	
J-6026-130-A	Grayscale chart
	

J-6029-140-A	PTB-500 Pattern Box
<ul style="list-style-type: none"> • Light source for test chart (220 to 240 VAC: PTB-220) (90 to 240 VAC: PTB-500)  <p>The PTB-220 (Pattern BOX) is also able to use.</p>	
VCT-14 Tripod Adaptor	
	
J-6309-200-A	Extension board EX-327
<ul style="list-style-type: none"> • For adjustment of SG-171, PR-180, IE-40, VA-138 and EN-95A boards 	

3-1-2. Connections and Initial Setting

3-1-3. Initial Setting

Set the camera switches and controls as follows.

GAIN switch : 0 dB
 OUTPUT switch : CAM (DCC OFF)
 WHITE BAL switch : PRESET
 FILTER knob : 1

VTR SELECT switch (CA-537P) : 1
 IRIS (Lens) : Manual
 ZOOM (Lens) : Manual

S1 (ZEBRA)/AT-78 board : OFF
 S5 (SHUTTER)/AT-78 board : OFF
 S6 (A. IRIS MODE)/AT-78 board : STD
 S7 (ATW)/AT-78 board : OFF
 S8 (TURBO GAIN)/AT-78 board : OFF
 S9 (EVS)/AT-78 board : OFF
 S10 (SC 0/180)/AT-78 board : OFF
 S11 (ADJ)/AT-78 board : ON
 S12 (MARKER)/AT-78 board : OFF
 S13 (MATRIX)/AT-78 board : STD
 S15 (CLOCK)/AT-78 board : OFF
 S1 (DTL)/IE-40 board : OFF

Note: 1. During the adjustment, do not touch the following switch.

- S11 (ADJ)/AT-78 board

2. Confirm that the GAIN switch is set as follows.

HIGH : 18 dB
 MID : 9 dB
 LOW : 0 dB

3-1-4. Notes on Adjustment

When replacing the CCD block and the VA-138 board, be sure to perform the following adjustment before the adjustment of 3-5. Video Signal System. The adjustment procedure is described in section 3-9.

Adjustment	Replacement of CCD Block	Replacement of VA-138 Board
BLACK SET Adjustment	○	○
Shading Balance Adjustment		○
White Shading Adjustment	○	○
PRE KNEE Adjustment		○

3-2. BEFORE ADJUSTMENT

- Note:** 1. Before adjustment, connect the equipments referring to Item 3-1-2. Connections.
2. Before adjustment, set the POWER switch to ON and allow for 10 minute warm-up time.

3-2-1. Color Bar Signal

Equipment : Vectorscope, Waveform monitor
Preparation : Set the OUTPUT switch on the side of the camera to BARS.
Specifications :

Chroma level

- Confirm that the beam spots of each color (R, YL, G, CY, G, CY, B, and MG) are inside the "田" mark.

Burst Spot 75%

- Note:** Partial difference between scale and signal level is caused by photographic error.
: If the specifications are not met, carry out Item 3-4.
ENCODER SYSTEM (EN-95A board) adjustment.

3-2-2. Sensitivity Measurement

Object : White pattern
Light : 3200K, 2000 lux
(If the pattern box "PTB-220/500" is used, set the AUTO mode)

Preparation :

- Adjust the zoom control at "TELE" so that the white pattern frame matches the underscanned picture frame on the screen.
- Manually set the iris control to F8.
- Set the OUTPUT switch on the side of the camera to CAM.
- Set the WHITE BAL switch on the side of the camera to PRESET.

Equipment : Waveform monitor

Specifications : 700 ± 70 mV

Note: If the specification is not met, perform all adjustments in Item 3-5. VIDEO SIGNAL SYSTEM.

3-2-3. Gamma and Gradation Measurement

Object : Grayscale chart
(Sony parts number J-6026-130-A)

Light : Pattern box PTB-220/500

Equipment : Waveform monitor

Preparation :

- Set the OUTPUT switch on the side of the camera to CAM.
- Set the WHITE BAL switch on the side of the camera to PRESET.
- Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.
- Adjust the iris control so that the white level of Grayscale chart is 700 mV on the waveform monitor.

Specifications : Confirm that the cross point level of the Grayscale chart is 420 ± 10 mV.

Note: Partial difference between signal level and scale is caused by a photographic error.

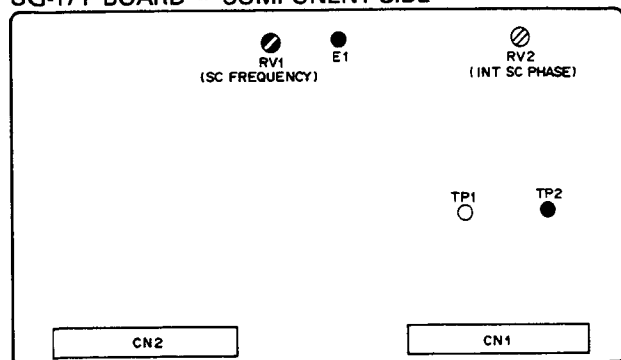

: If the specification is not met, carry out Item 3-5-13. through Item 3-5-20.

3-3. SYNC SIGNAL SYSTEM (SG-171 BOARD)

3-3-1. Sub Carrier Frequency Adjustment

Equipment : Frequency counter
To be extended : EN-95A board
Test point : TP2 (GND: E1)/SG-171 board
Adjustment point : ●RV1/SG-171 board
Specification : $4,433,618 \pm 10$ Hz

SG-171 BOARD —COMPONENT SIDE—

3-3-2. INT SC Phase Adjustment

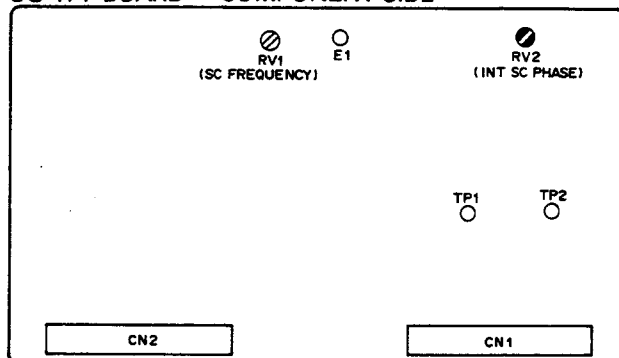

Note: Stated below is a procedure with the SC-H phase measuring equipment (Tektronix 1751). If any other equipment is used, perform adjustment at the following adjustment point by reading the instruction manual attached.

Equipment : SC-H phase measuring equipment
 To be extended : EN-95A board
 Preparation :
 • Disconnect the vectorscope and connect the Tektronix 1751 instead.
 • Put the Tektronix 1751 to SC-H mode.
 Test point : VIDEO OUT connector (side panel)
 Adjustment point : ●RV2 (INT SC PHASE)/SG-171 board
 Specification : See below.

Adjustment Procedures

1. Adjust the phase relationship between SC (burst) and H beam spot correctly with ●RV2 (INT SC PHASE).

SG-171 BOARD —COMPONENT SIDE—

Note: After the adjustment, disconnect Tektronix 1751 and connect the vectorscope.

3-4. ENCODER SYSTEM (EN-95A BOARD)

3-4-1. Carrier Balance Adjustment

Equipment : Vectorscope (MAX GAIN)
 To be extended : EN-95A board
 Preparation :
 • Set the OUTPUT switch on the side of the camera to BARS.
 Adjustment : Adjust \odot RV1 and \odot RV4/EN-95A board so that the white beam spot is in the center of the vectorscope.

3-4-2. BARS Level Adjustment

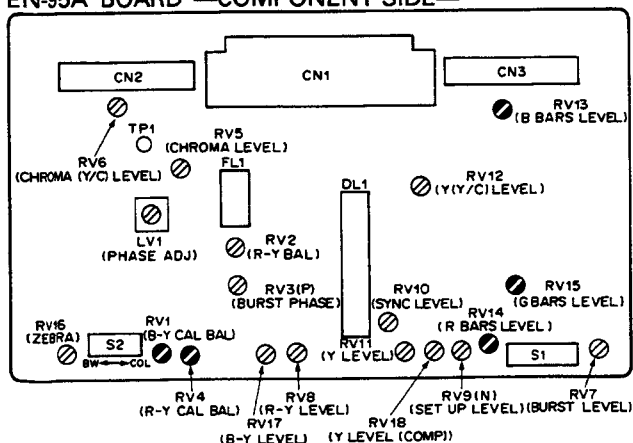

Equipment : Oscilloscope, Waveform monitor
 To be extended : EN-95A board
 Preparation :
 • OUTPUT switch (camera side panel) → BARS
 • S1/IF-313 board (CA-537P) → RGB (upper side)
 Trigger : HD (pin B18/extension board)
 Adjustment :
 1. Adjust \odot RV15/EN-95A board so that the video level at pin A6 (GND: pin A8)/extension board is 1.4 ± 0.02 V.

2. Adjust \odot RV13, \odot RV14/EN-95A board so that the carrier leakage at white portion is minimum.

EN-95A BOARD —COMPONENT SIDE—

3-4-3. Color Vector Adjustment

Equipment : Vectorscope
To be extended : EN-95A board
Preparation :

- Set the GAIN switch on the vectorscope to 75%.
- Adjust "PHASE" control on the Vectorscope so that the burst spot is set to the 75% axis. Set the OUTPUT switch on the side of the camera to BARS.

Adjustment :

1. Adjust \odot RV2, \odot RV5 and \odot LV1/EN-95A board so that the beam spot of each color are inside the "田" mark.
2. Adjust \odot RV3 and \odot RV7/EN-95A board so that the burst spots is positioned at the 75% scale.

3-4-4. Y. SYNC Level Adjustment

Equipment : Waveform monitor
To be extended : EN-95A board
Preparation :

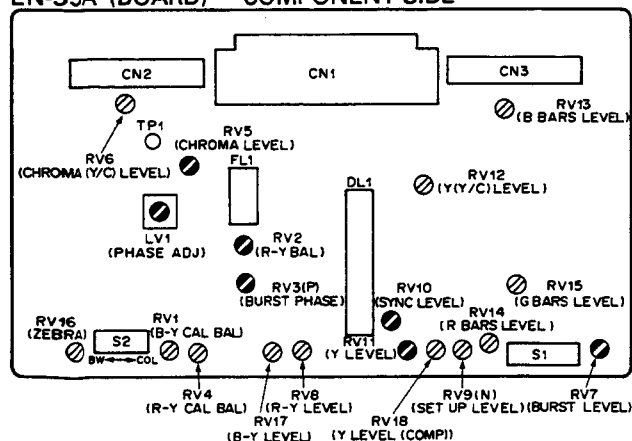

- Set the OUTPUT switch on the side of camera to BARS.

Adjustment :

1. Adjust \odot RV11/EN-95A board so that the A level of the color bars signal is 700 ± 7 mV.
2. Adjust \odot RV10/EN-95A board so that the SYNC level of the color bars signal is 300 ± 7 mV.

EN-95A (BOARD) —COMPONENT SIDE—

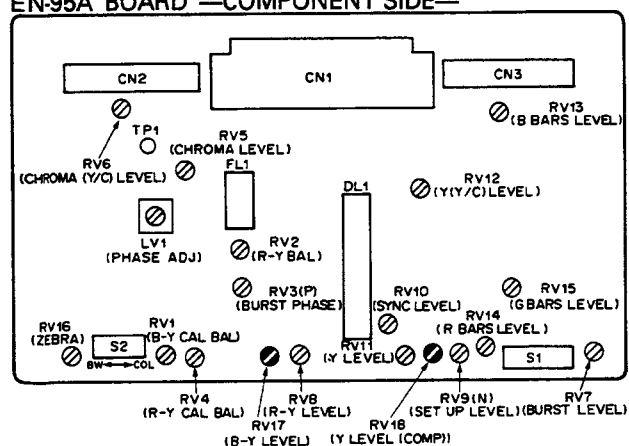

Equipment : Oscilloscope
Preparation :
• OUTPUT switch (camera side panel) → BARS
• S1/IF-313 board (CA-537P) → center position
To be extended : EN-95A board
Adjustment point : ●RV18/EN-95A board
Test point : pin A6 (GND: pin A8)/EN-95A board
Trigger : HD (pin B18/extension board)
Specification : A = 700 ± 10 mV

Equipment : Oscilloscope
To be extended : EN-95A board
Preparation :
• OUTPUT switch (camera side panel) → BARS
Test point : pin A5 (GND: pin A8)/extension board
Trigger : HD (pin B18/extension board)
Adjustment point : ⚙RV17/EN-95A board
Specifications : A = 525 ± 10 mV

EN-95A BOARD —COMPONENT SIDE—

3-4-7. R-Y OUT Level Adjustment

Equipment : Oscilloscope
 To be extended : EN-95A board
 Preparation :
 • OUTPUT switch (camera side panel) → BARS
 Test point : pin A7(GND: pin A8)/extension board
 Trigger : HD (pin B18/extension board)
 Adjustment point : RV8/EN-95A board
 Specifications : $A = 525 \pm 10$ mV

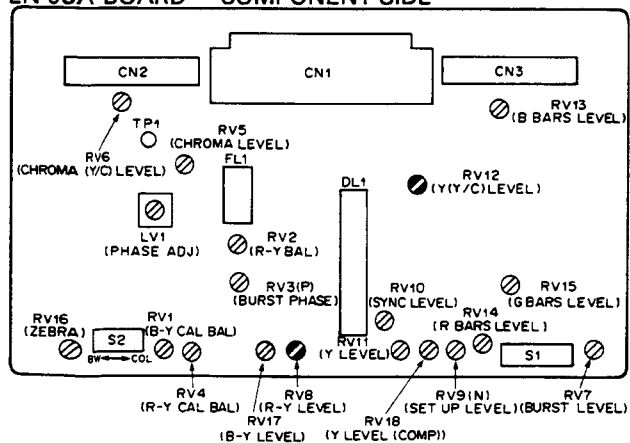

3-4-8. S-VHS VTR-Y Level Adjustment

Note: Before this adjustment, carry out Item 3-4-4. Color Vector Adjustment.

Equipment : Oscilloscope
 To be extended : EN-95A board
 Preparation :
 • Set the OUTPUT switch on the side of camera to BARS.
 Test point : pin A9 (GND: pin A10)/extension board
 Adjustment :
 Adjust RV12/EN-95A board so that the white level of Y signal is 700 ± 10 mV.

EN-95A BOARD —COMPONENT SIDE—

3-4-9. S-VHS VTR-Chroma Level Adjustment

Note: Before this adjustment, carry out Item 3-4-4. Y SYNC Level Adjustment.

Equipment : Oscilloscope
 To be extended : EN-95A board
 Preparation :
 • Set the OUTPUT switch on the side of the camera to BARS.
 Test point : pin A11 (GND: pin A12)/extension board
 Adjustment :
 Adjust RV6/EN-95A board so that the burst level in the chroma signal is $305 \pm 5 \text{ mV}$.

3-4-10. Zebra Adjustment

Object : Grayscale chart
 Equipment : Viewfinder
 Waveform monitor
 To be extended : EN-95A board
 Preparation :
 • Set the OUTPUT switch on the side of the camera to CAM (DCC OFF).
 • Set the S1 (ZEBRA ON/OFF) switch on the AT-78 board to ON.
 Adjustment :
 1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is $490 \pm 7 \text{ mV}$.

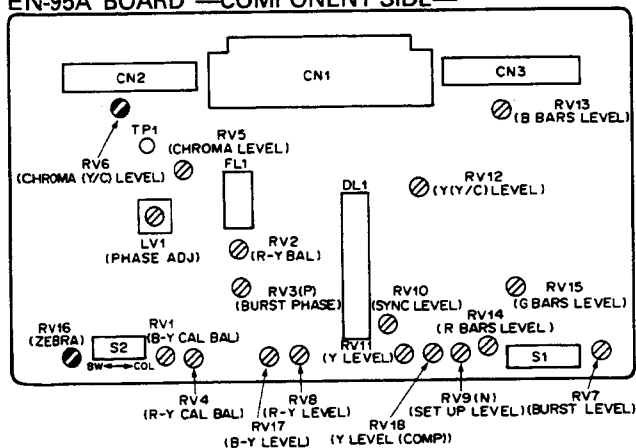

3. Adjust RV16/EN-95A board so that the zebra pattern appears on the portion A of the viewfinder screen.

Zebra Pattern

EN-95A BOARD —COMPONENT SIDE—

Note: After adjustment, set the S1/AT-78 board to OFF.

3-5. VIDEO SIGNAL SYSTEM (VA-138/PR-180 BOARD)

3-5-1. VOLTAGE Adjustment

Note: This adjustment influences operation of PR-180, IE-40 board.
Therefore, when this adjustment is carried out, all of following adjustments in VIDEO PROCESS SYSTEM and DETAIL SIGNAL SYSTEM must be confirmed. Perform adjustment when measured voltage is more than $\pm 1\%$ with respect to the specified voltage.

Equipment : Digital voltmeter
To be extended : VA-138 board
Test point : CN3-pin 11/VA-138 board
(GND: pin A1/extension board)
Adjustment point : \odot RV7/VA-138 board
Specifications : $+4.6 \pm 0.05$ Vdc

3-5-2. G ch Video Level Adjustment

Note: After this adjustment, perform the Item 3-5-3. and the Item 3-5-4. adjustment.

Object : Grayscale chart
Equipment : Oscilloscope
To be extended : VA-138 board
Preparation :
• WHITE BAL switch (camera side panel) \rightarrow PRESET
• OUTPUT switch (camera side panel) \rightarrow CAM (DCC OFF)

Trigger : pin A5/extension board
Adjustment :

1. Adjust the zoom control so that the chart frame matches the underscanned picture frame on the screen.

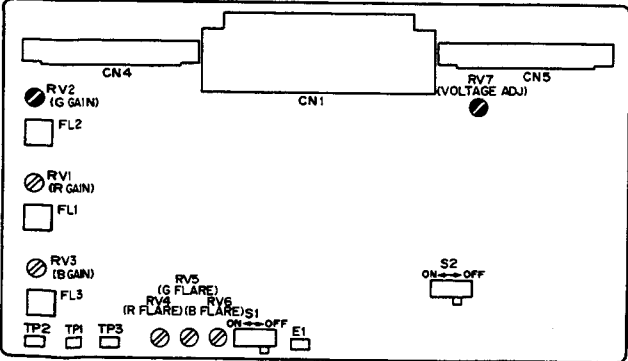

Monitor Screen

2. Manually set the iris control to F8.
3. Adjust \odot RV2/VA-138 board so that the video level at TP12/IE-40 board is 500 ± 5 mV.

Note: Do not adjust the iris control until the Item 3-5-3. and the Item 3-5-4. are completed.

VA-138 BOARD —COMPONENT SIDE—

3-5-3. B ch Video Level Adjustment

Note: Be sure carry out Item 3-5-2. G ch Video Level Adjustment before this adjustment.

Object : Grayscale chart

Equipment : Oscilloscope

To be extended : VA-138 board

Preparation :

- WHITE BAL switch (camera side panel) → PRESET
- OUTPUT switch (camera side panel) → CAM (DCC OFF)

Trigger : pin A5/extension board

Adjustment :

1. Adjust the zoom control so that the chart frame matches the underscanned picture frame on the screen.
2. Connect CH-1 of oscilloscope to TP12 (GND: E1)/IE-40 board, and make sure that the video level is 500 ± 5 mV.
3. Connect CH-2 of oscilloscope to TP9 (GND: E1)/PR-180 board, and adjust \odot RV3/VA-138 board so that the video level is about 500 mV.
4. Set the oscilloscope to ADD mode and CH-2 INVERT mode.
5. Readjust \odot RV3/VA-138 board so that the waveform becomes flat.

3-5-4. R ch Video Level Adjustment

Note: Be sure to carry out Item 3-5-2. G ch Level Adjustment before this adjustment.

Object : Grayscale chart

Equipment : Oscilloscope

To be extended : VA-138 board

Preparation :

- Set the OUTPUT switch on the side of the camera to CAM.
- Set the WHITE BAL switch on the side of the camera to PRESET.

Trigger : pin A5/extension board

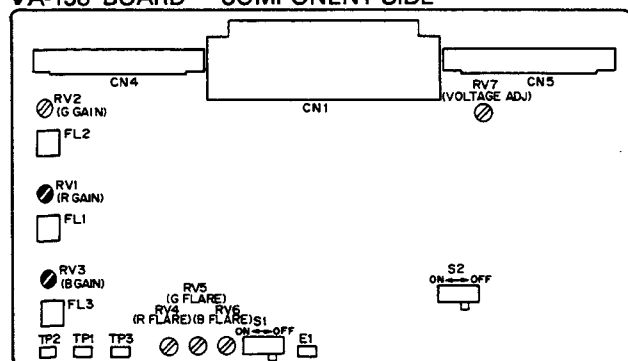

Adjustment :

1. Adjust the zoom control so that the chart frame matches the underscanned picture frame on the screen.
2. Connect CH-1 of oscilloscope to TP12 (GND: E1)/IE-40 board, and make sure that the video level is 500 ± 5 mV.
3. Connect CH-2 of oscilloscope to TP1 (GND: E1)/PR-180 board, and adjust \odot RV1/VA-138 board so that the video level is about 500 mV.
4. Set the oscilloscope to ADD mode and CH-2 INVERT mode.
5. Readjust \odot RV1/VA-138 board so that the waveform becomes flat.

Note: Do not adjust the iris control until the Item 3-5-4. are completed.

VA-138 BOARD —COMPONENT SIDE—

3-5-5. Pedestal Adjustment

Lens iris : Close "C"
Equipment : Oscilloscope, Vectorscope
(MAX GAIN)

Preparation :

- Set the S11 (ADJ) switch on the AT-78 board to ON.

To be extended : VA-138 board

Test point : TP8 (GND: E1)/PR-180 board

Adjustment :

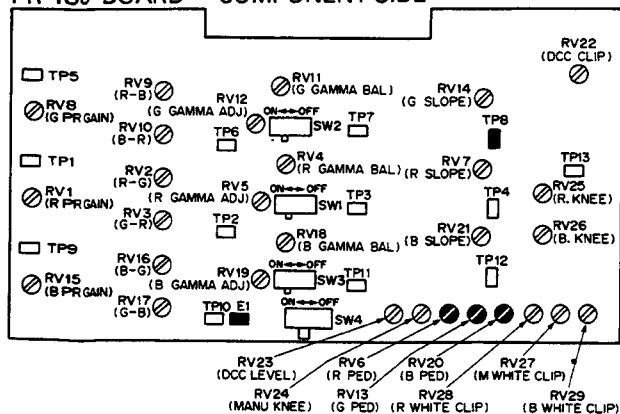

- Set the GAIN switch on the side of the camera to 0 dB.
1. Adjust \odot RV13/PR-180 board so that the pedestal level is 45 ± 5 mV.

2. Adjust \odot RV6 and \odot RV20/PR-180 board so that the beam spot is in the center of the vectorscope.

PR-180 BOARD —COMPONENT SIDE—

3-5-6. 1H GAIN Adjustment

Object : Grayscale chart
 Equipment : Oscilloscope, Waveform monitor
 To be extended : VA-138 board
 Preparation :

- Set the OUTPUT switch on the side of the camera to BARS.
- Set the WHITE BAL switch on the side of the camera to PRESET.

Test point : CH1: TP12(GND: E1)/IE-40 board
 CH2: TP2/IE-40 board

Trigger : pin A5/extension board

Adjustment point : RV1/IE-40 board

Adjustment :

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 700 ± 10 mV.

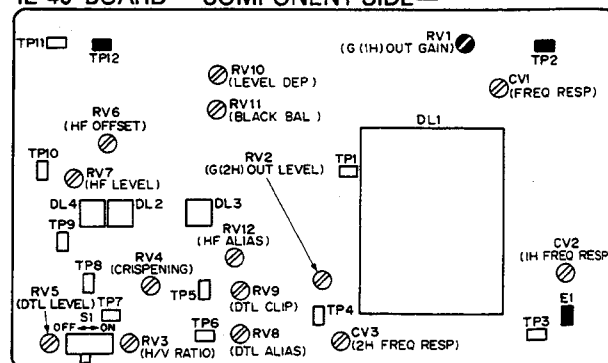

3. Set the oscilloscope to ADD mode and CH-2 INVERT mode.
4. Connect CH-1 and CH-2 of oscilloscope to TP12 (GND: E1)/IE-40 board.
 Adjust CH2-VAR control on the oscilloscope so that the waveform becomes flat for gain correction.

5. Connect CH-1 of oscilloscope to TP12 (GND: E1)/IE-40 board and CH-2 to TP2/IE-40 board (GND: pin A1/extension board).
6. Adjust RV1/IE-40 board so that the waveform becomes flat.

IE-40 BOARD —COMPONENT SIDE—

3-5-7. 2H GAIN Adjustment

Object : Grayscale chart
 Equipment : Oscilloscope
 To be extended : VA-138 board
 Test point : CH1: TP12 (GND: E1)/IE-40 board
 CH2: TP4/IE-40 board (GND: pin A1/
 extension board)
 Trigger : pin A5/extension board
 Adjustment point : RV2/IE-40 board
 Adjustment :

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 700 ± 10 mV.

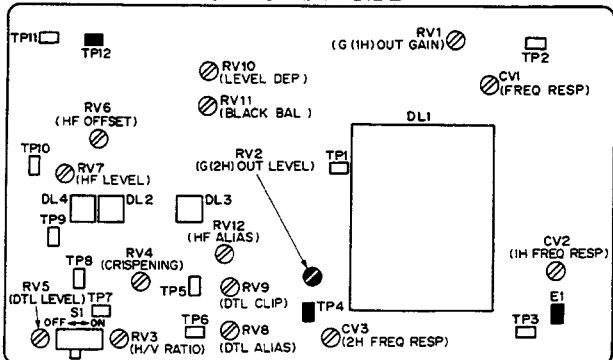

5. Connect CH-1 of oscilloscope to TP12 (GND: E1)/IE-40 board and CH-2 to TP4/IE-40 board (GND: pin A1/extension board).
6. Adjust RV2/IE-40 board so that the waveform becomes flat.

3. Set the oscilloscope to ADD mode and CH-2 INVERT mode.
4. Connect CH-1 and CH-2 of oscilloscope to TP12 (GND: E1)/IE-40 board.
 Adjust CH2-VAR control on the oscilloscope so that the waveform becomes flat for gain correction.

IE-40 BOARD —COMPONENT SIDE—

3-5-8. 1H OUT Frequency Responce Adjustment

Note: Perform this adjustment only when replacing a DL1 delay line on the IE-40 board.

Object : Burst chart
Equipment : Oscilloscope, Waveform monitor
To be extended : VA-138 board
Adjustment :

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 700 ± 15 mV.

3. Adjust CV1/IE-40 board so that the input level and output level at 5.0 MHz portion are almost equal as shown below.

IE-40 board (GND: E1/PR-180 board)

Test point (Input signal)	Test point (Output signal)	Adjusting point	Specification (5.0 MHz)
TP12/IE-40 board	TP2/IE-40 board	CV1	$A \div B$

INPUT

(TP12/IE-40 board)

5.0 MHz

$A=B$

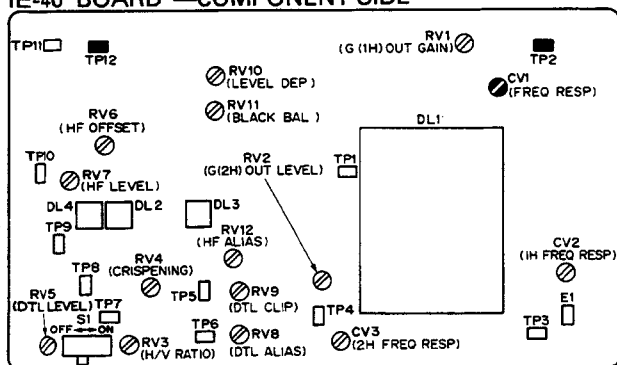

OUTPUT

(TP2/IE-40 board)

5.0 MHz

IE-40 BOARD —COMPONENT SIDE—

3-5-9. 1H OUT Phase Adjustment

Note: Perform this adjustment only when replacing a DL1 delay line on the IE-40 board.

- Object : White portion of pattern box
 Equipment : Oscilloscope, Waveform monitor
 To be extended : VA-138 board
 Trigger : pin A5/extension board
 Adjustment :
 1. Shoot the white portion of the pattern box as shown below.

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 700 ± 15 mV.

IE-40 BOARD —COMPONENT SIDE—

3. Connect CH-1 of oscilloscope to TP12 (GND: E1)/IE-40 board.
 4. Connect CH-2 of oscilloscope to TP2/IE-40 board (GND: pin A1/extension board).
 5. Adjust CV2/IE-40 board so that the waveform phase between the CH1 and CH2 is coincided.

3-5-10. 2H OUT Phase Adjustment

Note: Perform this adjustment only when replacing a DL1 delay line on the IE-40 board.

Object : White portion of pattern box
Equipment : Oscilloscope, Waveform monitor
To be extended : VA-138 board
Trigger : pin A5/extension board
Adjustment :

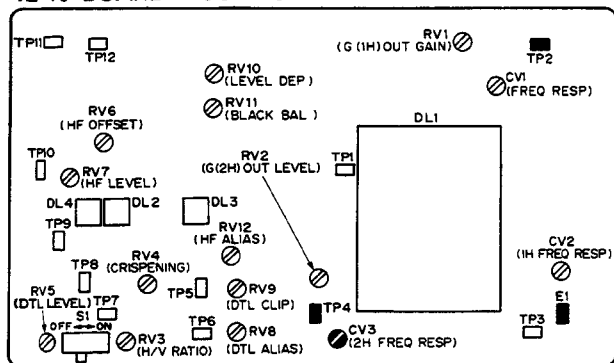

1. Shoot the white portion of the pattern box as shown below.

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 700 ± 15 mV.

IE-40 BOARD —COMPONENT SIDE—

3. Connect CH-1 of oscilloscope to TP2 (GND: E1)/IE-40 board.
4. Connect CH-2 of oscilloscope to TP4/IE-40 board (GND: pin A1/extension board).
5. Adjust CV3/IE-40 board so that the waveform phase between the CH1 and CH2 is coincided.

3-5-11. G ch GAIN Adjustment

Note: The Item 3-5-12. R/B Preset Adjustment must be done before this adjustment.

Object : Grayscale chart
 Equipment : Oscilloscope
 To be extended : VA-138 board
 Preparation :
 • WHITE BAL switch (camera side panel) → PRESET
 • OUTPUT switch (camera side panel) → CAM (DCC OFF)
 Trigger : pin A5/extension board
 Adjustment :

1. Adjust the zoom control so that the chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Adjust the iris control so that the video level at TP5 (GND: E1)/PR-180 board is 500 ± 10 mV.

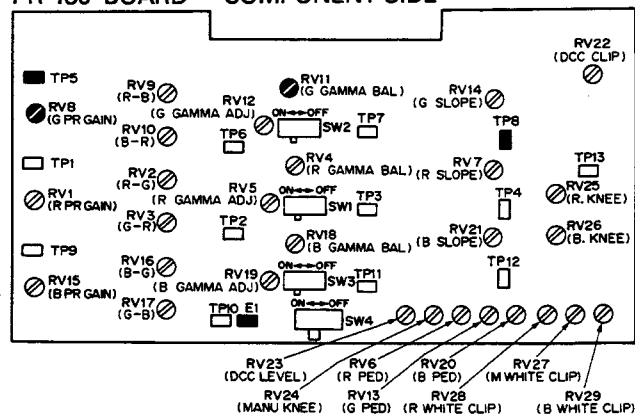

Note: Do not adjust the iris control until the Item 3-5-12. are completed.

3. Connect CH-1 of oscilloscope to TP8 (GND: E1)/PR-180 board.
4. Check that the waveform level does not change when SW2 (GAM)/PR-180 board is repeatedly turned ON and OFF. (If it changes, adjust RV11/PR-180 board.)
5. Adjust RV8/PR-180 board so that the video level is 1400 ± 10 mV.

6. After adjustment is completed, set the SW2 (GAM)/PR-180 board to ON.

PR-180 BOARD —COMPONENT SIDE—

3. ALIGNMENT

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

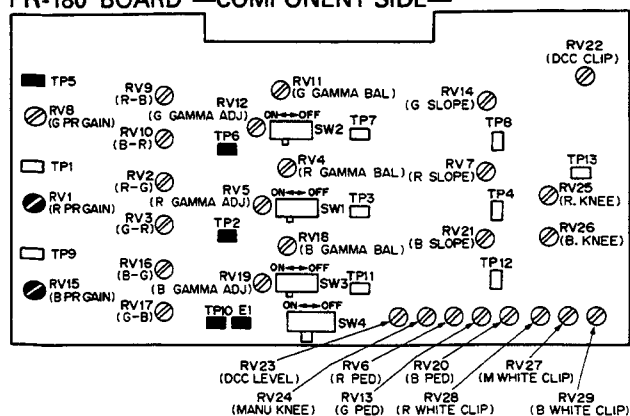

Monitor Screen

2. Adjust the iris control so that the video level at TP5 (GND: E1)/PR-180 board is 500 ± 10 mV.

3. Set the oscilloscope to ADD mode and CH-2 INVERT mode.
4. Connect CH-1 and CH-2 of oscilloscope to TP6 (GND: E1)/PR-180 board.
Adjust CH2-VAR control on the oscilloscope so that the waveform becomes flat for gain correction.

PR-180 BOARD —COMPONENT SIDE—

5. Connect CH-1 of oscilloscope to TP6 (GND: E1) and CH-2 to TP2 (GND: E1) on the PR-180 board. Adjust \odot RV1/PR-180 board so that the waveform becomes flat.

6. Connect CH-1 of oscilloscope to TP6 (GND: E1) and CH-2 to TP10 (GND: E1) on the PR-180 board. Adjust \odot RV15/PR-180 board so that the waveform becomes flat.

3-5-13. G ch Gamma Balance and Gamma Set Adjustment

Note: After this adjustment, perform the item 3-5-14. and the Item 3-5-15. adjustment.

- Object : Grayscale chart
Equipment : Oscilloscope
To be extended : VA-138 board
Trigger : pin A5/extension board
Adjustment :
1. Adjust the zoom control so that the grayscale chart frame matches the underscanned picture frame on the screen.

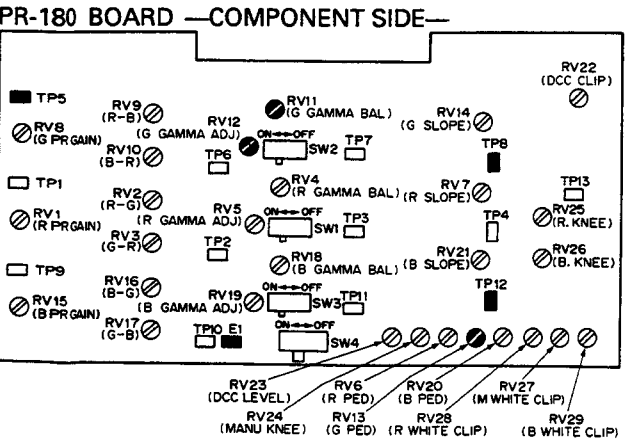

Monitor Screen

2. Adjust the iris control so that the video level at TP5 (GND: E1)/PR-180 board is 500 ± 10 mV on the oscilloscope.

3. Connect a probe of oscilloscope to TP8 (GND: E1)/ PR-180 board.

4. Adjust RV12/PR-180 board so that the cross point level of the video signal is 880 ± 10 mV.

5. Adjust RV11/PR-180 board so that the white level of grayscale chart is 1400 ± 10 mV.

6. Cover the lens with lens cap.
7. Adjust RV13/PR-180 board so that the pedestal level is 45 ± 5 mV.

8. Remove the lens cap.
9. Repeat procedure 4 through procedure 8 several times.
10. Do not adjust the iris control until the Item 3-5-14. and the Item 3-5-15. are completed.

3-5-14. R ch Gamma Balance Adjustment

Note: The Item 3-5-13. must be done before this adjustment.

Object : Grayscale chart
Equipment : Oscilloscope
To be extended : VA-138 board
Trigger : pin A5/extension board
Adjustment :

1. Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Make sure that the video level at TP5 (GND: E1)/PR-180 board is 500 ± 10 mV.
3. Connect a probe of oscilloscope to TP4 (GND: E1)/PR-180 board.
4. Adjust \odot RV5/PR-180 board so that the crosspoint level of the video signal is 880 ± 10 mV.

5. Adjust \odot RV4/PR-180 board so that the white level of grayscale chart is 1400 ± 10 mV.

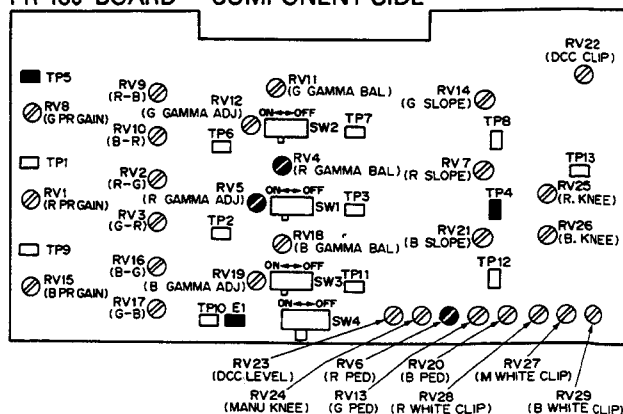

6. Cover the lens with lens cap.
7. Adjust \odot RV6/PR-180 board so that the pedestal level is 45 ± 5 mV.

8. Remove the lens cap.
9. Repeat procedure 4 through procedure 8 several times.
10. Do not adjust the iris control until the Item 3-5-15. are completed.

PR-180 BOARD —COMPONENT SIDE—

3-5-15. B ch Gamma Balance Adjustment

Note: The Item 3-5-13. must be done before this adjustment.

Object : Grayscale chart
 Equipment : Oscilloscope
 To be extended : VA-138 board
 Trigger : pin A5/extension board
 Adjustment :

1. Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Make sure that the video level at TP5 (GND: E1)/PR-180 board is 500 ± 10 mV.
3. Connect a probe of oscilloscope to TP12 (GND: E1)/PR-180 board.
4. Adjust \odot RV19/PR-180 board so that the cross point level of the video signal is 880 ± 10 mV.

5. Adjust \odot RV18/PR-180 board so that the white level of grayscale chart is 1400 ± 10 mV.

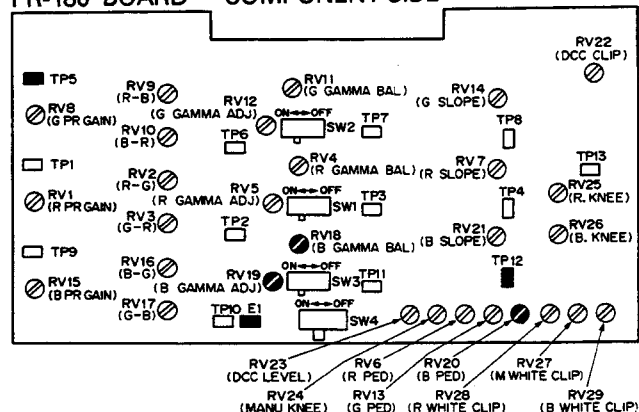

6. Cover the lens with lens cap.
7. Adjust \odot RV20/PR-180 board so that the pedestal level is 45 ± 5 mV.

8. Remove the lens cap.
9. Repeat procedure 4 through procedure 8 several times.

PR-180 BOARD —COMPONENT SIDE—

Note: After adjustment is completed, perform the Item 3-5-17. R/B-ch Gamma Balance Adjustment.

3-5-16. Flare Adjustment

Object : Grayscale chart
 Equipment : Waveform monitor
 To be extended : VA-138 board
 Adjustment :

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Adjust the iris control so that the white level of video signal is 700 ± 7 mV.

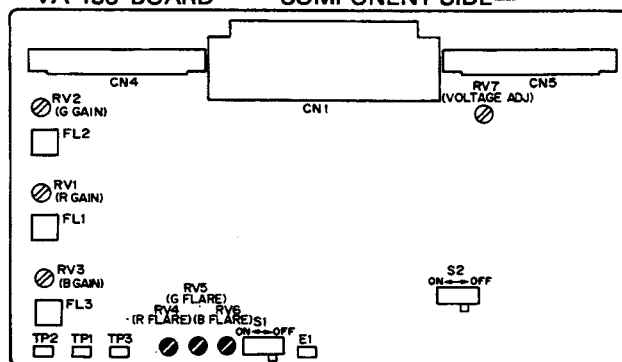

3. Adjust RV4, RV5, and RV6/VA-138 board so that the level "B" is maximum and the carrier leakage is minimum at the same time.

Carrier leakage is minimized.

VA-138 BOARD —COMPONENT SIDE—

3-5-17. R/B ch Gamma Set and Preset Adjustments

Object : Grayscale chart
Equipment : Waveform monitor, Vectorscope (MAX GAIN)
To be extended : VA-138 board
Adjustment :

1. Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

Monitor Screen

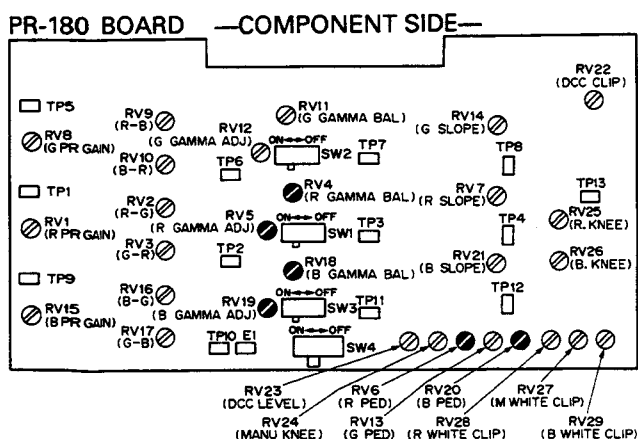

2. Adjust the iris control so that video level is 700 ± 10 mV on the waveform monitor.

3. **●RV5/PR-180 board**
●RV19/PR-180 board
Alternately adjust the above two controls several times so that the beam spot is in the center of vectorscope.
4. **●RV4/PR-180 board**
●RV18/PR-180 board
Alternately adjust the above two controls several times so that the beam spot is in the center of vectorscope.

5. Cover the lens with lens cap.
6. Alternately adjust \odot RV6 and \odot RV20 on the PR-180 board several times so that beam spot is in the center of vectorscope.
7. Remove the lens cap.
8. Repeat procedure 3 through procedure 7 several times.
9. After the adjustment, the following specifications must be met.
If not, perform from Item 3-5-2. G ch Video Level Adjustment once more.

3-5-18. KNEE Adjustment

Note:

The following items must be done before this Adjustment:

- Item 3-5-13. G ch Gamma Balance and Gamma Set Adjustment
- Item 3-5-14. R ch Gamma Balance Adjustment
- Item 3-5-15. B ch Gamma Balance Adjustment
- Item 3-5-17. R/B ch Gamma Set and Preset Adjustment

Object : Grayscale chart

Equipment : Waveform monitor

To be extended : VA-138 board

Preparation :

- Set the GAIN switch on the side of the camera to MID (9 dB).

- ⒶRV7, 14, 21/PR-180 board → Fully clockwise Ⓐ

Trigger : pin A5/extension board

Adjustment procedures :

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Adjust the iris control so that the video level "A" at VIDEO OUT connector (camera side panel) is 700 ± 7 mV.

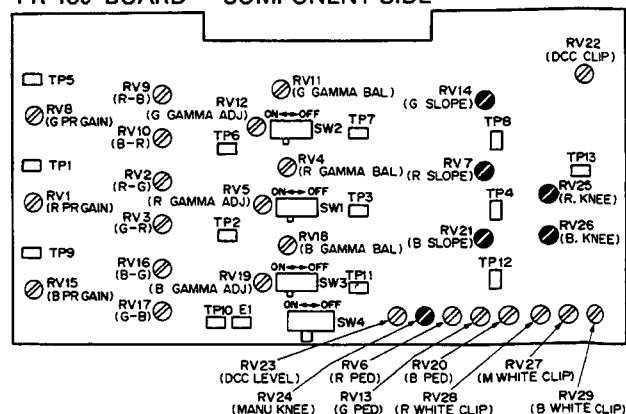

3. ⒶRV 7, 14, 21/PR-180 → Fully clockwise Ⓐ
4. Turn ⒶRV24/PR-180 counterclockwise slowly from fully clockwise and stop where the level "A" at VIDEO OUT connector becomes 728 ± 7 mV.
5. Adjust ⒶRV25, 26/PR-180 several times so that the carrier leakage of center in the waveform is minimized.

6. Turn ⒶRV14/PR-180 counterclockwise slowly and stop where the level "A" at VIDEO OUT connector becomes 784 ± 7 mV.

7. Adjust ⒶRV7, 21/PR-180 so that the carrier leakage "B" is minimized.

PR-180 BOARD —COMPONENT SIDE—

3-5-19. DCC Adjustment

Object : Grayscale chart
 Equipment : Waveform monitor
 To be extended : VA-138 board
 Preparation :

- OUTPUT switch (camera side panel) → CAM (DCC ON)

Adjustment :

1. Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 721^{+7}_{-0} mV.

3. Adjust RV23/PR-180 board so that the level "A" is 707^{+7}_{-0} mV.

4. Set the GAIN switch on the side of camera to MID (9 dB).

5. Adjust RV22/PR-180 board so that the level "B" is 630 ± 7 mV.

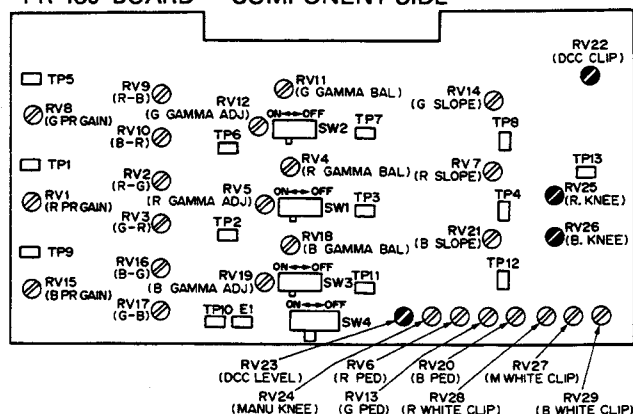

6. Alternately readjust RV25 and RV26/PR-180 board so that the carrier leakage level of step 2 and 3 is minimized.

7. Set the GAIN switch on the side of camera to low (0 dB).
8. Set the OUTPUT switch on the side of camera to DCC OFF.
9. Adjust the iris control so that the cross point level "B" is 700 ± 7 mV.
10. Set the OUTPUT switch on the side of camera to DCC ON. And make sure that the cross point level "B" is 651 ± 7 mV.

PR-180 BOARD — COMPONENT SIDE —

3-5-20. White Clip Adjustment

Object : Grayscale chart
 Equipment : Waveform monitor
 To be extended : VA-138 board
 Preparation :

- Set the OUTPUT switch on the side of the camera to CAM.
- Set the GAIN switch on the side of the camera to 18 dB.

Adjustment :

1. Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

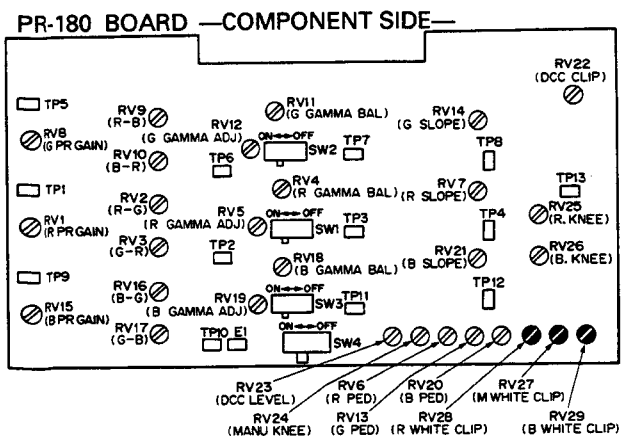

Monitor Screen

2. Adjust RV27/PR-180 board so that the white peak level is 805 ± 14 mV on the waveform monitor.

3. Open the lens iris fully.
4. Adjust RV28, RV29/PR-180 board several times so that the carrier leakage of the white peak level is minimized.
5. Repeat the steps 3 and 4 several times.

Note: After adjustment is completed, set the GAIN switch on the side of the camera to 0 dB.

3-6. IMAGE ENHANCER SYSTEM ADJUSTMENT (IE-40 board)

3-6-1. HF Offset Adjustment

Object : Grayscale chart
Equipment : Oscilloscope, Waveform monitor
To be extended : VA-138 board
Trigger : pin A5/extension board
Adjustment :

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

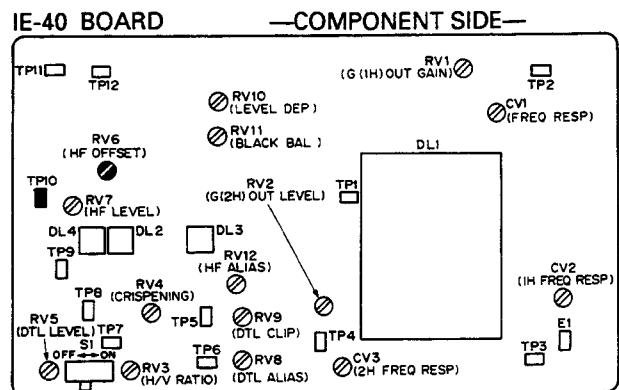

Monitor Screen

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 700 ± 10 mV.

3. Adjust RV6/IE-40 board so that the DC offset level at TP10/IE-40 board (GND: pin A1/extension board) is 0 ± 10 mV.

3-6-2. Aperture Adjustment

Object : Burst chart
 Equipment : Waveform monitor
 To be extended : VA-138 board
 Preparation : DTL switch (S1)/IE-40 → OFF
 Adjustment :

1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame the screen.

Monitor Screen

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 700 ± 14 mV.

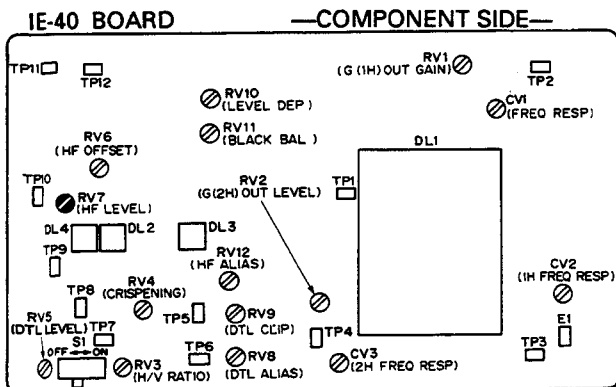

3. Adjust RV7/IE-40 board so that the ratio of 5 MHz level "B" at VIDEO OUT connector (camera side panel) to 0.5 MHz level "A" is $85 \pm 5\%$.

(To get the following picture, set the LINE SEL switch on the waveform monitor to "15 LINES".)
 And adjust the VAR control of LINE SEL.

$$B = A \times (85 \pm 5\%)$$

3-6-3. CRISPENING Adjustment

Note: Perform the adjustment only when replacing a RV4 potentiometer on the IE-40 board.

- Object : Burst chart
 Equipment : Oscilloscope, Waveform monitor
 To be extended : VA-138 board
 Test point : TP11/IE-40 board
 (GND: pin A1/extension board)
 Trigger : pin A5/extension board
 Preparation :
 • Set the GAIN switch on the side of the camera to 0 dB.
 Adjustment point : RV4/IE-40 board
 Adjustment :
 1. Adjust the zoom control of the lens so that the chart frame matches the underscanned picture frame on the screen.

Monitor Screen

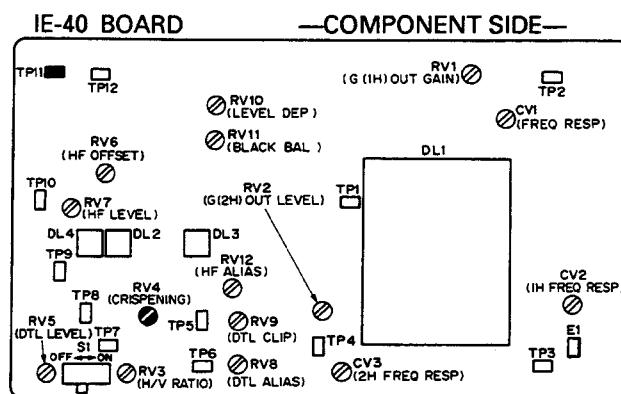

2. Adjust the iris control so that the video level at VIDEO OUT connector (camera side panel) is 560 ± 14 mV.

3. RV4/IE-40 board → Fully counterclockwise
 4. Adjust the video level "A" at TP11/IE-40 board (GND: Pin 1A/extension board) with the VAR knob of the oscilloscope so that it is 6 cm on the scale of the oscilloscope display.

5. Adjust RV4/IE-40 board so that the video level at TP11/IE-40 board (GND: Pin A1/extension board) is 5.75 ± 0.2 cm on the scale of the oscilloscope display.

3-6-4. H.V.RATIO Adjustment

- Object : Grayscale chart
 Equipment : B/W monitor, waveform monitor
 To be extended : VA-138 board
 Preparation :
 • Set the S1 (DTL) switch on the IE-40 board to ON.
 • Set the WHITE BAL switch on the side of the camera to PRESET.

Adjustment point : \odot RV3/IE-40 board

Adjustment :

- Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

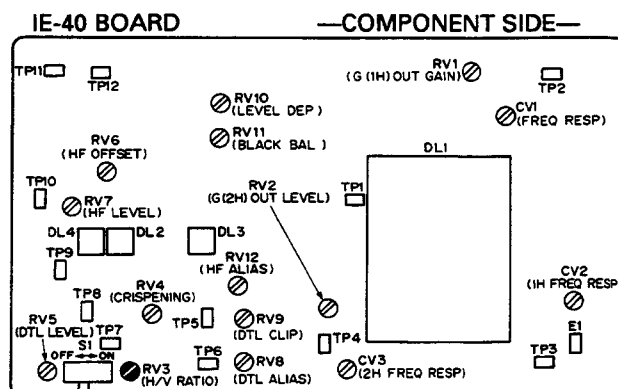

Monitor Screen

- Adjust the iris control so that the video level is 560 ± 14 mV on the waveform monitor.

- Observing the point indicated on the B/W monitor (See the figure below.), adjust \odot RV3/IE-40 board so that the ratio of H to V of DTL is 3 to 2.

3-6-5. Detail Level Adjustment

Object : Grayscale chart
Equipment : Waveform monitor
To be extended : VA-138 board
Preparation :

- WHITE BAL switch (camera side panel) → PRESET
- DTL switch (S1)/IE-40 → ON

Adjustment point : RV5/IE-40 board

Adjustment :

1. Adjust the zoom control so that the grayscale chart frame touches the underscanned picture frame on the monitor.

Monitor Screen

2. Adjust the iris control so that the white level of the grayscale chart is 560 ± 14 mV.

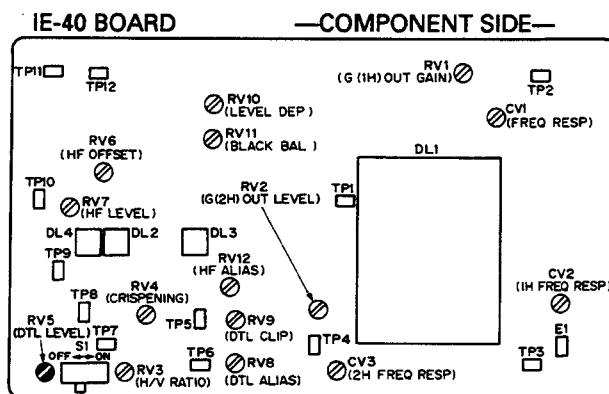

3. Adjust "LINE SELECTOR (15 LINE)" of the waveform monitor so that a selected line is overlapped with white level of the grayscale chart on the waveform monitor.

Adjust RV 5/IE-40 board so that the DTL level is 50 ± 5 mV.

Note: If the two DTL level are not balanced, take the bigger one.

4. Repeat the 3-6-4. H.V.RATIO Adjustment to the 3-6-5. Detail Level Adjustment several times.
5. After the adjustment, set the DTL switch (S1)/IE-40 to OFF.

3-7 AUTO SYSTEM (AT-78 board)

Note: Be sure to set the S11 (ADJ)/AT-78 board to ON then OFF, before performing the adjustment of auto system.

3-7-1. LOW LIGHT Adjustment

Object : Grayscale chart
Equipment : Waveform monitor
Preparation :

- Set the WHITE BAL switch on the side of the camera to PRESET.
- Press the DISP CHG button several times until the following (see illustration below) display appears on the viewfinder screen.

BATT	: 12.0 V
WHITE	: PRESET
BLACK	: AUTO
IRIS	: STD
GAIN	: -3dB
DCC	: ON
MATRIX	: STD
SHUTTER	: 1/100
→ L. L. IND	: ON
TONE SET	: ON

Adjustment point : ●RV5/AT-78 board

Adjustment :

1. Adjust the zoom control so that Grayscale chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Adjust the lens iris control so that the white level of the video signal is 300 ± 7 mV.

3. Rotate ●RV5/AT-78 board slowly counterclockwise from the rightmost position until the point where the "LOW LIGHT" indication on the viewfinder screen.
4. Open the iris control gradually and confirm that the white level of the video signal is 275 ± 35 mV when the "LOW LIGHT" indication disappears. If the specification is not met, repeat procedure 3.

3-7-2. Auto Iris Adjustment

- Object : Grayscale chart, Pattern box (white)
 Equipment : Waveform monitor
 Preparation :
- Set the WHITE BAL switch on the side of the camera to PRESET.
 - S6 (A. IRIS MODE)/AT-78 board → STD
 - Set the iris control to AUTO
 - Rotate RV8 (IRIS MODE)/AT-78 board fully clockwise

Adjustment :

1. Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

Monitor Screen

2. Adjust RV5 (IRIS SET)/AT-78 board so that the white peak level "A" is 610 ± 7 mV.
3. Adjust RV8 (IRIS MODE)/AT-78 board so that the white peak level "A" is 685 ± 7 mV.

4. Remove the grayscale from the pattern box, and image the white of the pattern box with the lens zoom set fully to TELE.
5. Make sure that the white peak level "B" is 560 ± 20 mV.

6. Set the A. IRIS MODE switch (S6)/AT-78 board to BACK L.
7. Adjust RV9/AT-78 board so that the cross point level "B" is 600 ± 7 mV.

8. Check that the peak level "A" in the figure above is 600 ± 35 mV when the A. IRIS MODE switch (S6)/AT-78 board is set to SPOT L.
9. After adjusting, return the following switch to its original setting
 - A. IRIS MODE switch (S6)/AT-78 board → STD
 - Iris control → MANUAL

3-7-3. Character Size Adjustment

Test point : Viewfinder screen

Preparation :

- OUTPUT switch (camera side panel) → BARS
- DISP CHG switch (camera side panel) → ON

Adjustment point : ●CV1/AT-78 board

Adjustment :

Adjust ●CV1/AT-78 board so that the "B" line on white block for character display matches the "A" line on color bar screen.

3-8. AUDIO SYSTEM

3-8-1. Tone Level Adjustment

Connection:

Equipment
Preparation

- : Oscilloscope
- : OUTPUT switch/camera side panel
→ BARS
- Press the DISP CHG button several times until the following (see illustration below) display appears on the viewfinder screen.
(TONE SET OFF → ON)

BATT	: 12.0 V
WHITE	: PRESET
BLACK	: AUTO
IRIS	: STD
GAIN	: -3dB
DCC	: ON
MATRIX	: STD
SHUTTER	: 1/100
→ L. L. IND	: ON
TONE SET	: ON

Adjustment point : ●RV101/MB-477 board
Specification : $A = 600 \pm 15 \text{ mV}$

Note: After adjustment is completed, TONE SET is OFF.

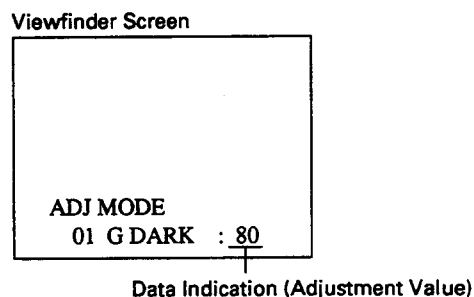

3-9. Adjustment when replacing the CCD BLOCK/VA-138 board

3-9-1. ADJ Mode Description

1. S11(ADJ)/AT-78 board is ON until the following (see illustration below) display appears on the viewfinder screen.

2. Press the DISP CHG button (camera side panel) until the following (See illustration below) display on the viewfinder screen.

The ADJ mode can be changed from 01h to 15h by pressing the DISP CHG button (camera side panel) repeatedly.

[ADJ MODE]

01 G DARK	0C B H SAW
02 G BLACK1	0D G V SAW
03 R DARK	0E R V SAW
04 R BLACK1	0F B V SAW
05 B DARK	10 G VA GAIN
06 B BLACK1	11 R VA GAIN
07 G SHAD BAL	12 B VA GAIN
08 R SHAD BAL	13 M PRE KNEE
09 B SHAD BAL	14 R PRE KNEE
0A G H SAW	15 B PRE KNEE
0B R H SAW	

<On data indication (adjustment value)>

The data indication (adjustment value) is changed from "00" to "FF" by pressing the UP or DOWN button (camera front panel).

(The adjustment value changes in the same manner as the signal level which is changed when the general VR is turned.)

UP/DOWN buttons	Data indication (adjustment value)	Position of general VR
DOWN ↑ ↓ UP	00h	Minimum
	80h	Mechanical center
	FFh	Maximum

[Pre-adjustment]

The data indication (adjustment value) "80h" can be set by pressing the UP/DOWN buttons simultaneously.

3-9-2. Black Set Adjustment

Lens Iris : Close "C"
 Equipment : Oscilloscope
 To be extended : VA-138 board
 Preparation : S11(ADJ)/AT-78 board → ON

Adjustment :

1. Press the DISP CHG button (Camera side panel) until the following (See illustration below) display appears on the viewfinder screen.

Viewfinder Screen

2. In the following setting, adjust in order of G ch, R ch, and B ch.

	Test Point /PR-180	ADJ Mode (Indication)	GAIN SW (Camera side panel)
G	TP7	G DARK	18 dB (High)
		G BLACK1	0 dB (Low)
R	TP3	R DARK	18 dB (High)
		R BLACK1	0 dB (Low)
B	TP11	B DARK	18 dB (High)
		B BLACK1	0 dB (Low)

3. Set the ADJ mode to DARK and adjust so that the waveform level "A" of the oscilloscope is 0 ± 5 mV when the GAIN switch level is 18 dB by pressing the UP/DOWN buttons (camera front panel).

4. Set the ADJ mode to BLACK 1 and adjust so that the waveform level "A" of the oscilloscope becomes 0 ± 5 mV when the GAIN switch level is 0 dB by pressing the UP/DOWN buttons on the (camera front panel).

5. Repeat steps 3 and 4, and check that the level does not fluctuates even though the GAIN switch position is changed from 0 dB to 18 dB vice versa.
6. Adjust R ch and B ch in the same procedure as above.
7. After adjustment, return the GAIN switch position on the side of the camera to 0dB and set the S11(ADJ)/AT-78 board to OFF.

3-9-3. Shading Balance Adjustment

Lens Iris : Close "C"
 Equipment : Oscilloscope
 Trigger : pin A5/extension board
 Preparation :

- S11(ADJ)/AT-78 board → ON
- Set the data indication (adjustment value) on the viewfinder screen in the ADJ mode to "FFh".

Adjustment :

1. Press the DISP CHG button (camera side panel) until the following (see illustration below) display appears on the viewfinder screen.

2. While pressing the UP/DOWN buttons on (camera front panel), adjust so that the waveform of the oscilloscope becomes flat in order of G ch, R ch, and B ch.

	Test Point	ADJ MODE/ (Indication)	Spec.
G	TP12 /IE-40	G SHAD BAL	
R	TP1 /PR-180	R SHAD BAL	
B	TP9 /PR-180	B SHAD BAL	

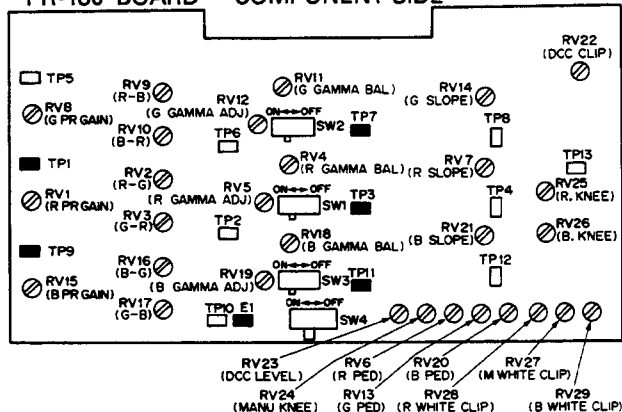

3. After adjustment, set the data indication (adjustment value) on the viewfinder screen in the ADJ mode from "FFh" to "80h".

(G H SAW : 80
 R H SAW : 80
 B H SAW : 80

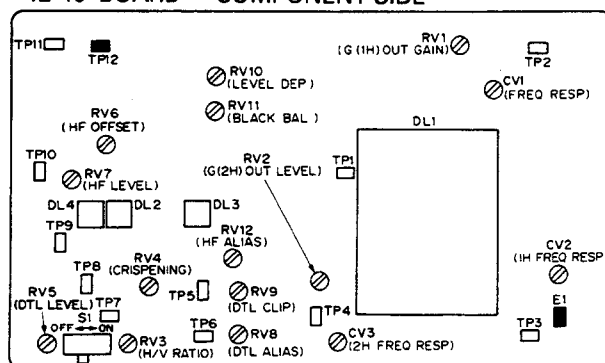

(The data indication can be set to "80h" by pressing the UP/DOWN buttons (camera front panel) simultaneously.)

Note: After adjustment is completed, perform the item 3-9-4. While Shading Adjustment.

PR-180 BOARD —COMPONENT SIDE—

IE-40 BOARD —COMPONENT SIDE—

3-9-4. White Shading Adjustment

Note: The item 3-9-3. must be done before this adjustment.

Object : White portion of pattern box
 Equipment : Oscilloscope, Waveform monitor
 To be extended : VA-138 board
 Preparation : S11(ADJ)/AT-78 board → ON

Adjustment :

1. Shoot the center portion of the pattern box by zooming the lens to fully telephoto position.
2. Adjust the iris control so that the level "A" is $490 \pm 14\text{mV}$.

Waveform monitor

3. Press the DISP CHG button (Camera side panel) until the following (see illustration below) display appears on the viewfinder screen.

Viewfinder Screen

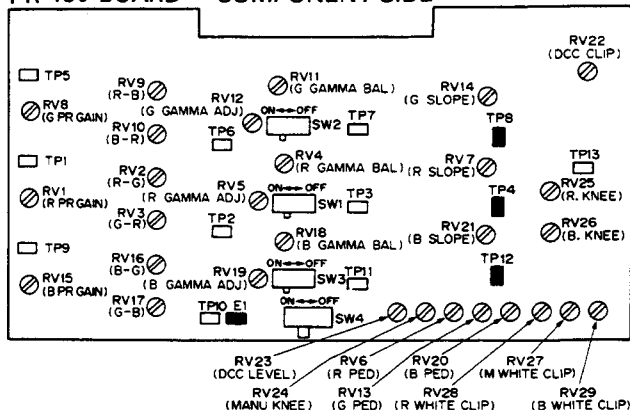

4. In the following ADJ mode, adjust so that the waveform of the oscilloscope becomes flat by pressing the UP/DOWN buttons (camera front panel).

- ① Connect CH-1 of oscilloscope to TP8(G)/PR-180 board, and adjust so that the waveform becomes flat.
- ② Connect CH-1 of oscilloscope to TP8(G)/PR-180 board and connect CH-2 of oscilloscope to TP4 (R)/PR-180 board. Set the oscilloscope to ADD mode and CH-2 INVERT mode. Adjust so that the waveform becomes flat.
- ③ Connect CH-1 of oscilloscope to TP8(G)/PR-180 board and connect CH-2 of oscilloscope to TP12(B)/PR-180 board. Set the oscilloscope to ADD mode and CH-2 INVERT mode. Adjust so that the waveform becomes flat mode.

ADJ mode (Indication)		G	H SAW	G	V SAW
Test point /PR-180		R	H SAW	R	V SAW
		B	H SAW	B	V SAW
G	TP8				
R	TP4				
B	TP12				

5. After adjustment, set S11(ADJ)/AT-78 board to OFF.

PR-180 BOARD —COMPONENT SIDE—

3-9-5. PRE KNEE Adjustment

Object : Grayscale chart

Equipment : Oscilloscope

To be extended : VA-138 board

Preparation :

- S11(ADJ)/AT-78 board → ON
- Output switch/camera side panel → CAM (DCC OFF)

Adjustment :

1. Press the DISP CHG switch (camera side panel) and display the following indication on the viewfinder screen. Press the UP/DOWN buttons (camera front panel) and set the data indication (adjustment value) to "A0h".

Viewfinder Screen

2. Adjust the zoom control so that the Grayscale chart frame matches the underscanned picture frame on the screen.

Monitor Screen

3. Adjust the lens iris control so that the white level of the video level is $820 \pm 10 \text{ mV}$.

4. Press the UP/DOWN buttons (camera front panel) so that the video level at TP5 (GND:E1)/PR-180 board is $800 \pm 5 \text{ mV}$.

5. GAIN switch (camera side panel) → MID (9dB).
6. Connect the CH-2 of oscilloscope to TP5(GND:E1)/PR-180 board. And set the oscilloscope to ADD mode and CH-2 INVERT mode.
7. Connect the CH-2 of oscilloscope to TP1 (GND:E1)/PR-180 board.
8. Press the DISP CHG switch (camera side panel) once and display "14 R PRE KNEE" of the ADJ mode.

Viewfinder Screen

9. Press the UP/DOWN buttons (camera front panel) so that the waveform is flat.

10. Press the DISP CHG switch (camera side panel) once and display "15 B PRE KNEE" of the ADJ mode.

Viewfinder Screen

11. Connect the CH-2 of oscilloscope to TP9(GND:E1)/PR-180 board.
Press the UP/DOWN buttons (camera front panel) so that the waveform is flat.

12. After adjustment, set S11(ADJ)/AT-78 board to OFF.

VCL-916BYA

The Sony VCL-916BYA is a 16x zoom lens designed for use with a Sony 2/3-inch CCD color video camera.
Please refer to the camera's instruction manual when using the lens.

Location and Function of Parts and Controls

1 Focus ring

2 F1 (flange focal length) adjustment ring

3 MACRO (close-up) button

4 MACRO (close-up) ring

For close-up, set the focus ring to the 0.9 position, and while sliding the MACRO button, turn this ring fully in the direction of the arrow. Set the ZOOM selector to M and focus with the zoom lever.

5 Zoom remote control connector (8-pin)

Connect the optional LO-23 lens remote control unit for remote control of zooming.

6 Focus remote control connector (3-pin)

Connect a commercially available device for remote control of focusing.

7 ZOOM selector

8 Zoom lever

9 Iris ring

10 RET (return video) button

Keep this button depressed to monitor the E-E picture from the connected VTR on the viewfinder. Release the button to monitor the camera picture.

When a camera control unit is connected, keep this button depressed to monitor the return video, and release the button to monitor the camera picture.

11 VTR button

Press this button to start and stop recording.

When a camera control unit is connected, keep this button depressed to monitor the return video, and release the button to monitor the camera picture.

12 Motorized zoom switch

13 IRIS selector

14 Instant automatic iris adjustment button

15 Lens connector (12-pin)

Specifications

Focal length	9.0 to 144 mm
Zoom	Manual and motorized, selectable Zooming ratio: 16×
Maximum aperture ratio	1 : 1.8
Iris control	Manual and auto, selectable 1.8 to 16 and C (closed)
Range of object field (at the distance of 0.9 m)	W (wide angle): 815 × 611 mm (32 1/8 × 24 1/8 inches) T (telephoto): 51 × 38 mm (2 1/8 × 1 1/2 inches)
Minimum object distance	0.9 m
Filter thread	77 mm dia. 0.75 pitch
Mount	Bayonet mount
Dimensions	120 × 214.2 mm (dia./length) (4 3/4 × 8 1/2 inches) incl. projecting parts and lens hood
Mass	Approx. 1.2 kg (2 lb 10 oz) without lens hood
Supplied accessory	Operating instructions (1)

Design and specifications are subject to change without notice.

注意：

1. DC電圧はデジタル電圧計による値。
2. 波形写真、及びDC電圧は下記条件での測定。

- 本機にCA-537を接続する。
- オートホワイトバランスをとった後にグレースケールチャートを撮像し、波形モニターにて、ビデオ出力の白レベルが100 IREになる様にレンズ絞りをセットする。

• SWITCH POSITION

• OUTPUT	: CAM(DCC OFF)	• CLOCK	: OFF
• GAIN	: 0dB	• EVS	: OFF
• WHITE BAL	: A	• TURBO GAIN	: OFF
• SHUTTER	: OFF	• MATRIX	: OFF
• ZEBRA MARKER	: OFF	• ATW	: OFF
• PHASE	: 0°	• A IRIS MODE	: STD

NOTE:

1. All voltage are DC measured with a digital voltmeter.
2. All waveforms are taken and DC voltage is measured in condition below.

- Connect the camera adapter CA-537/537P to the camera.
- After the auto white balance adjustment is complete, shooting the grayscale chart, adjust the lens iris so that a white level is 100 IRE (700 mV) on the waveform monitor.

• SWITCH POSITION

• OUTPUT	: CAM(DCC OFF)	• CLOCK	: OFF
• GAIN	: 0dB	• EVS	: OFF
• WHITE BAL	: A	• TURBO GAIN	: OFF

SECTION D

SPARE PARTS

PARTS INFORMATION

1. Safety Related Component Warning

Components identified by shading marked with  on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose parts numbers appear as shown in this manual or in service manual supplements published by Sony.

2. Replacement Parts supplied from Sony Parts Center will sometimes have different shape and outside view from the parts which actually in use. This is due to **"accommodating the improved parts and/or engineering changes"** or **"standardization of genuine parts."** This manual's exploded view and electrical spare parts lists are indicating the parts numbers of "the standardized genuine parts at present." Regarding engineering parts and diagrams changes in our engineering department, refer to SONY service bulletins and service manual supplements.
3. The parts marked with "S" in the SP column of the exploded views and electrical spare parts list are normally required for routine service work. Orders for parts marked with "O" will be processed, but allow for additional delivery time.
4. Item with no parts number and/or no description are not stocked because they are seldom required for routine service.
5. All capacitors are in micro farads unless otherwise specified.
All inductors are in micro henries unless otherwise specified.
All resistors are in ohms.
